1. INTRODUCTION

This report describes well and spring monitoring activities conducted by SPF Water Engineering (SPF) for Calico Resources USA Corp's Grassy Mountain Gold Project Groundwater Resources Baseline Study.

1.1. Work Plan

The scope of work for this study is described in the *Environmental Baseline Study Work Plans, Grassy Mountain Project* (EM Strategies 2017). This document is referred to as the Work Plan in this report.

The 2017 Work Plan Section 3.4.7 describes the following attributes to be included in this baseline data report:

- Introduction
- Regulatory environment
- Groundwater study area
- Sampling events
- Sampling sites
    - Monitoring wells
    - Springs
    - Flowing wells
- Data collection methods
    - Description of sampling sites
    - Water level measurements
    - Continuous water level measurements
    - Spring flow measurement
    - Pump installation and sampling manifold
    - Monitoring well water quality data collection method
    - Spring water quality data collection method
    - Spring water quality QA/QC
- Results and analyses
    - Water level data
    - Spring/flowing well flow data
    - Water quality analysis
    - QA/QC
- List of preparers

1.2. Purpose of Report

This report summarizes the groundwater baseline data as required by the Work Plan for the proposed Grassy Mountain Gold Project underground mine (Proposed Grassy Mountain Mine). Specifically, Calico Resources USA Corp (Calico), a wholly owned subsidiary of Paramount Gold Nevada Corp (Paramount), has conducted investigations

to address the requirements of the Work Plan. A separate document will be prepared to address the request from the Technical Review Team Water Resources Subcommittee (TRT) for a conceptual groundwater model.

The purpose of the Groundwater Resource Baseline Study is to:

- Provide baseline data of the quality and quantity of local groundwater resources.
- Develop a monitoring well network for the purpose of monitoring groundwater levels and water quality within each aquifer potentially affected by mining operations.
- Collect data of known and acceptable quality in accordance with project-specific methods and procedures for use in this baseline report and for permitting. Data compilation is intended for future use in mine development and operations, exploration, closure and long-term remediation.

Specifically, this report:

- Serves as the groundwater baseline data report required in the Work Plan.
- Incorporates all baseline spring and well data collected between 2013 and 2018.
- Provides the following additional data requested by the TRT (Lynch 2014):
    - Time series plots including hydrographs
    - Water quality samples compared to drinking water Maximum Contaminant Levels
    - Groundwater surface contour maps
    - Naturally occurring variables and trends
    - Discussion of the impact of pumping at nearby wells on both GW-1 and GW-4.
- Will be used in a subsequent report which will describe the conceptual groundwater model for the Proposed Grassy Mountain Mine.

1.3. Report Organization

The remainder of this report is organized as follows:

- **Section 2** describes the regulatory environment that is the basis for creating this report.
- **Section 3** summarizes investigations conducted in support of the baseline characterization including previous investigations of hydrogeology in the vicinity of the mine site.
- **Section 4** describes the water resources study area.
- **Section 5** provides a synopsis of the baseline water quality and water level monitoring events and schedule.
- **Section 6** describes well and spring monitoring locations.

- **Section 7** describes data collection methods**.**
- **Section 8** describes groundwater level baseline monitoring data.
- **Section 9** describes spring flow monitoring data.
- **Section 10** reviews groundwater quality, including regulated constituents for wells, springs, and flowing artesian wells compared to current national primary and secondary drinking water standards and aquatic habitat criteria (for springs).
- **Section 11** provides conclusions of the groundwater baseline monitoring.
- **Section 12** lists preparers of the baseline report.
- **Section 13** includes references.

2. REGULATORY ENVIRONMENT

The primary objective of the well and spring monitoring activities established by the Work Plan is to collect data to characterize existing (pre-mining) groundwater resources within the Study Area. This baseline characterization will ultimately be used in a conceptual groundwater model and in future evaluations to determine impacts the mining operations could have on groundwater resources. The groundwater environmental baseline methodology required for the Division 37 Oregon Chemical Process Mining Permit is described in Oregon Administrative Rules (OAR) 632-037-0005 through 632-037-0155 and EM Strategies (2017). The methodologies also satisfy Oregon Department of Environmental Quality (ODEQ) requirements, described in Division 43, Chemical Mining (OAR 340-043-0000 through 340-043-0180).

The Work Plan has been developed under the criteria and/or guidelines established by the technical review team (TRT) assembled for the project, pursuant to Oregon Revised Statute (ORS) 517.967.

SPF has prepared this report in accordance with Oregon State Board of Geologist Examiners (OSBGE) general report guidelines (OSBGE 2014) for Paramount and Calico under SPF's contract dated August 2016.

3. SUMMARY OF INVESTIGATIONS

This section provides an inventory of the baseline study completion status.

3.1. Baseline and Background Study Completion Inventory

This report is intended to serve as a complete groundwater baseline data compilation and characterization for Grassy Mountain. Previous memorandums and reports submitted to the TRT providing additional details of the data collected include:

- Grassy Mountain Gold Project Water Resources Baseline Study 2013 Annual Sampling Report (SPF 2015a)
- Quarterly transmittal memorandums to the TRT for monitoring events performed between 2013 and 2018, including data collection forms, laboratory water quality reports, well water level and spring flow data, and photographs of the springs
- Revised Grassy Mountain Gold Project Surface Water Baseline Report (SPF, 2018a)
- Monitoring Well GMW17-32 Completion Report (SPF 2018b)
- GMW17-31, GMW17-33, and GMW18-34 Wells Completion Report (SPF 2018c)

Baseline and background monitoring efforts have consisted of the following investigations:

- Baseline monitoring of groundwater levels and groundwater quality at existing and newly installed wells.
- Baseline monitoring of flow and water quality at spring locations.
- Background monitoring of flow at spring and flowing well locations.

This report presents the baseline data collected in accordance with the Work Plan. The baseline data will be analyzed and interpreted in a subsequent Conceptual Groundwater Report.

4. WATER RESOURCES STUDY AREA

The Project is located in Malheur County, Oregon, approximately 22 miles south-southwest of Vale (Figure 1) and consists of two areas: the Mine and Process Area and the Access Road Area (Permit Area) (Figure 2).

The Mine and Process Area is located on three patented lode mining claims and unpatented lode mining claims that cover an estimated 886 acres. These patented and unpatented lode mining claims are part of a larger land position that includes 455 unpatented lode mining claims and nine mill site claims on lands administered by the Bureau of Land Management (BLM) (Figure 2). All proposed mining would occur on the patented claims, with some mine facilities on unpatented claims. The Mine and Process Area is in all or portions of Sections 5 through 8, Township 22 South, Range 44 East (T22S, R44E) (Willamette Meridian).

The Access Road Area is located on public land administered by the BLM, and private land controlled by others (Figure 2). A portion of the Access Road Area is a Malheur County Road named Twin Springs Road. The Access Road Area extends north from the Mine and Process Area to Russell Road, a paved Malheur County Road. The Access Road Area is in portions of Section 5, T22S, R44E, Sections 3, 10, 11, 14, 15,

21 through 23, 28, 29, and 32, T21S, R44E, Sections 1, 12 through 14, 23, 26, 27, and 34, T20S, R44E, Sections 6 and 7, T20S, R45E, and Sections 22, 23, 26, 35, and 36, T19S, R44E (Willamette Meridian). The width of the Access Road Area is 300 feet (150 feet on either side of the access road centerline) to accommodate possible minor widening or rerouting, and a potential powerline adjacent to the access road. There are several areas shown that are significantly wider than 300 feet on the Permit Area Map (Figure 2), which are areas where the final alignment has not yet been determined. The final engineering of the road will be consistent throughout, and within the Permit Area. The Access Road Area also includes a buffer on either side of the proposed road width for the collection of environmental baseline data. The road corridor will be approximately 30 feet wide. The Access Road Area totals approximately 876 acres.

The Water Resources Study Area (Study Area) was established to develop an environmental water resources baseline for assessing potential impacts from Project facilities and to provide background data on nearby springs and on the Owyhee River and Lake. The Study Area includes an area encompassing the Mine and Process Area and two separate, non-contiguous, areas on the Owyhee River/Lake. A map of the Study Area is included as Figure 3. All of the baseline well and spring sites are located within the Study Area.

Surface water baseline data characterization and analyses are described in the final revised Surface Water Baseline Report (SPF 2018a).

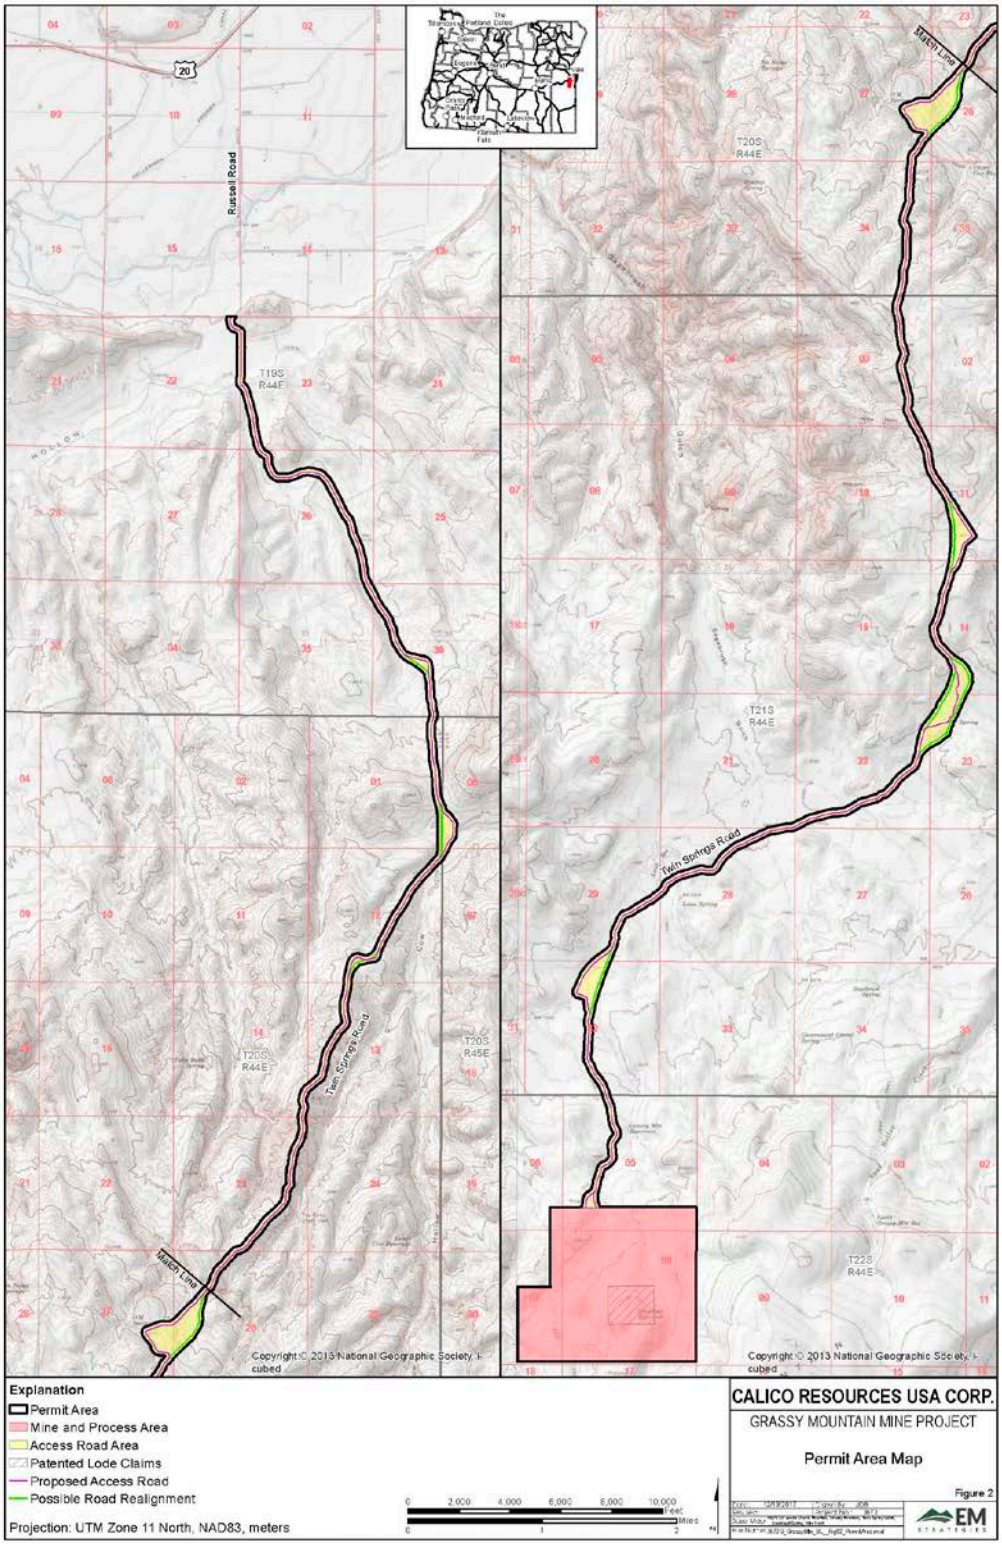

Figure 2. Permit Area

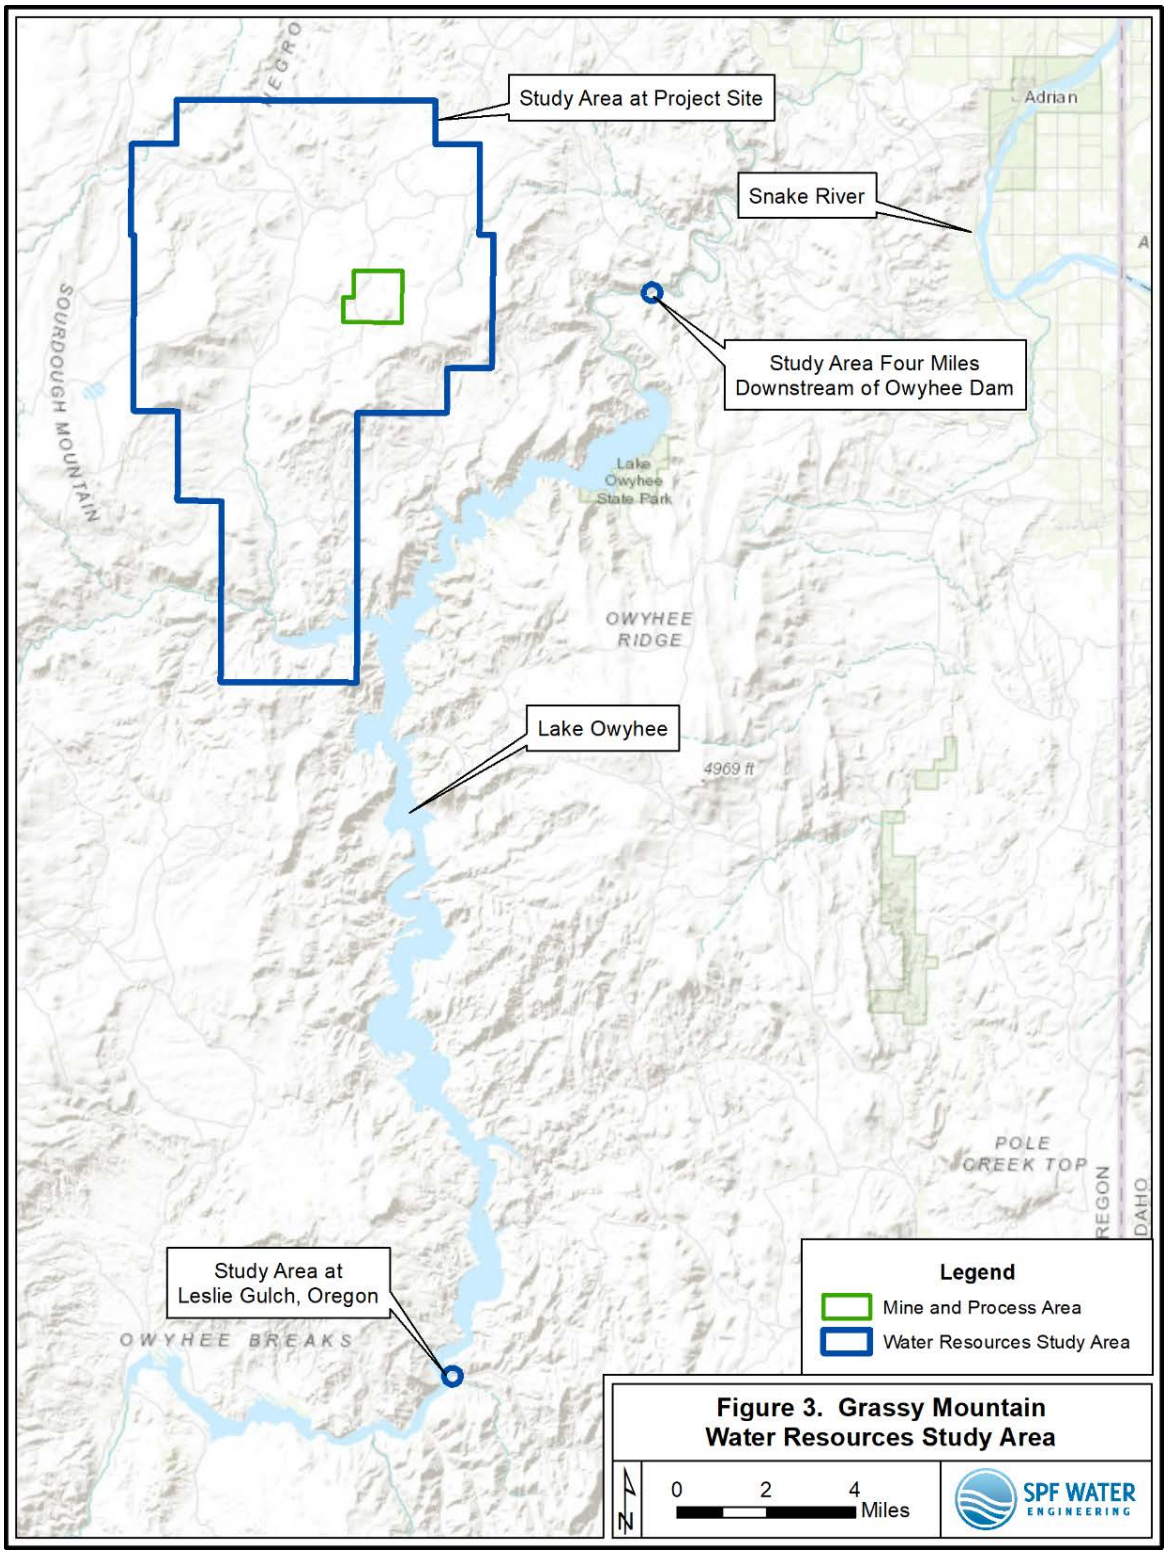

Figure 3. Grassy Mountain Water Resources Study Area

5. SAMPLING AND MONITORING EVENTS

5.1. Water Quality Sampling Events

Four (4) quarterly water quality sampling events occurred during 2013, in March (1st Quarter), June (2nd Quarter), August (3rd Quarter), and November (4th Quarter). Three (3) more quarterly sampling events occurred in 2014, in March (1st Quarter), June (2nd Quarter), and September (3rd Quarter).

The sampling schedule was in accordance with the Work Plan, with sampling conducted quarterly and with a minimum of three (3) weeks separating each sampling event. After seven (7) quarterly water quality sampling events, the TRT determined that adequate water quality data were collected from the shallow well monitoring network to satisfy baseline study requirements (Riggs 2016 included in Appendix A).

Groundwater level and water quality monitoring events in wells are summarized in Table B1 in Appendix B.

Outside the quarterly water quality sampling events, additional one-time sampling events occurred from well 59762 and from the recently constructed monitoring wells GMW17-32, and GMW17-33. These occurred in December of 2017 with additional development and sampling of GMW17-32 in July and December of 2018.

5.2. Spring Flow and Water Level Sampling Events

During each of the water quality sampling events described in Section 5.1, spring flow rates were measured and well/piezometer water levels were measured. With the exception of the 1st and 2nd Quarters of 2015[1], this flow and water level monitoring has continued on a voluntary, quarterly basis through the 3rd Quarter of 2018. This report includes all monitoring between 2013 and the 3rd Quarter of 2018.

In addition to the springs and wells used for water quality sampling purposes, flow rates from "background springs" and two flowing wells were measured on twice-yearly basis in 2013, 2014, and 2015.

Background and baseline monitoring events for springs and flowing artesian wells are summarized in Table B2 in Appendix B.

5.2.1. Continuous Water Level Measurements

During the 1st Quarter 2013 sampling event, water level pressure transducers and a barometric pressure logger were installed in three monitoring wells. The transducers collect continuous baseline water level data to provide a more complete description of seasonal groundwater level trends in the vicinity of the Project site.

[1] Due to a change in ownership of the project, no monitoring occurred during these two quarters.

6. SAMPLING SITES

6.1. Monitoring Wells

6.1.1. Water Level Monitoring and Water Quality Sampling Wells

Manual water level measurements and water quality samples were collected from eleven (11) monitoring wells during each of the quarterly sampling events. A twelfth well, Prod-1, is artesian so flow measurement and water quality samples were collected from this well. These wells are identified in Table B1 in Appendix B. A summary of all project well completion details is provided in Table 1 below and Table C1 in Appendix C. The location of these wells (labeled as Quarterly WL/WQ) are shown on Figure 4. This map includes the boundary of the approved Water Resources Study Area.

Once completed, new monitoring wells GMW17-32 and GMW17-33 were sampled once[2] for water quality and included in the quarterly water level monitoring, in accordance with the Final Work Plan for Grassy Mountain Monitoring Wells (SPF 2016b). Well 59762 was re-developed and sampled once for water quality in 2017. This well has also been monitored for water level on a quarterly basis since 2013. Details are in the well completion reports for GMW17-31, GMW17-32, GMW17-33, and GMW18-34 provided in Appendix K.

6.1.2. Manual Water Level Measurement Only Wells

In addition to the twelve (12) wells used for water level (or flow) and water quality monitoring, water levels were measured in an additional seven (7) monitoring wells during each of the quarterly sampling events. During the 2nd and 3rd Quarters of 2014, another five (5) monitoring wells were added to the program[3]resulting in twelve (12) additional wells. These wells are identified in Table B1 in Appendix B.

The location of the wells where only water level measurements were collected (labeled as Quarterly WL) is shown on Figure 4.

The additional twelve (12) wells were selected for water level monitoring and not used for water quality monitoring because either the well has been reported as unsuitable for water quality sampling (RMEC 2012, JMM 1991), the well has not been evaluated for condition in the last 20 years, or the well is considered to be redundant to a well that is being sampled (constructed similarly with similar water levels and located in close proximity to a well that is sampled). The additional (12) wells provide additional baseline water level data and to better define groundwater flow within the Study Area.

[2] GMW17-32 was actually sampled for water quality three times, but only the third and final results are considered baseline data and occurred after significant re-development of the well.
[3] These wells were identifed after a more thorough review of the historical record.

1 - as reported on the drillers log
2 - based on short-term testing by driller during or following construction
3 - based on long-term test pumping
4 - surveyed with the exception of GW-3A, GW-3, GMW-17-31, GMW17-32, GMW17-33, and GMW18-34

Table 1. Well Completion Details

Two recently completed monitoring wells, GMW17-31 and GMW18-34, were dry at the time of completion. Months after completion less than a foot of water was measured in GMW17-31. GMW18-34 has remained dry.

There are also two (2) other monitoring wells known to be dry, these are 59765 (MW-6, OWRD well tag number 109355) and GW-3A. These wells, labeled as dry, are shown on Figure 4.

6.1.3. Continuous Water Level Measurements

The wells selected for continuous water level measurements have varying completion depths and groundwater elevations, and are dispersed throughout the Study Area to collect water level data from different water-bearing zones within the aquifer. The wells used for continuous water level monitoring are identified in Table B1 in Appendix B.

6.2. Springs

6.2.1. Baseline Springs

During each quarterly sampling event, a total of eleven (11) springs (baseline springs) were visited within the Study Area. These baseline springs are listed in Table B2 in Appendix B and locations are shown on Figure 4. Flow was measured, water quality samples collected if there was adequate spring flow present, and photographs were taken during each quarterly event. All of the baseline springs were sampled at least once for water quality except for Grassy Spring, where there was insufficient flow for sampling (flows were always <0.05 gpm). Table B2 in Appendix B identifies those springs with adequate flow for sampling during each quarterly event.

6.2.2. Background Springs

There are sixteen (16) additional springs located within the Study Area that are identified as background springs in the Work Plan. Photographs were taken of each of these springs, and flow measured if observed and a suitable location exists for measuring the flow. The background springs are listed in Table B2 in Appendix B and locations are shown on Figure 5.

6.3. Flowing Wells

There are two flowing wells located within the Study Area that are also identified as background monitoring locations. These wells are the Darky Rock Well and the Flowing Well. Photographs were taken and flow measured from these wells. These two wells are shown on Figure 5.

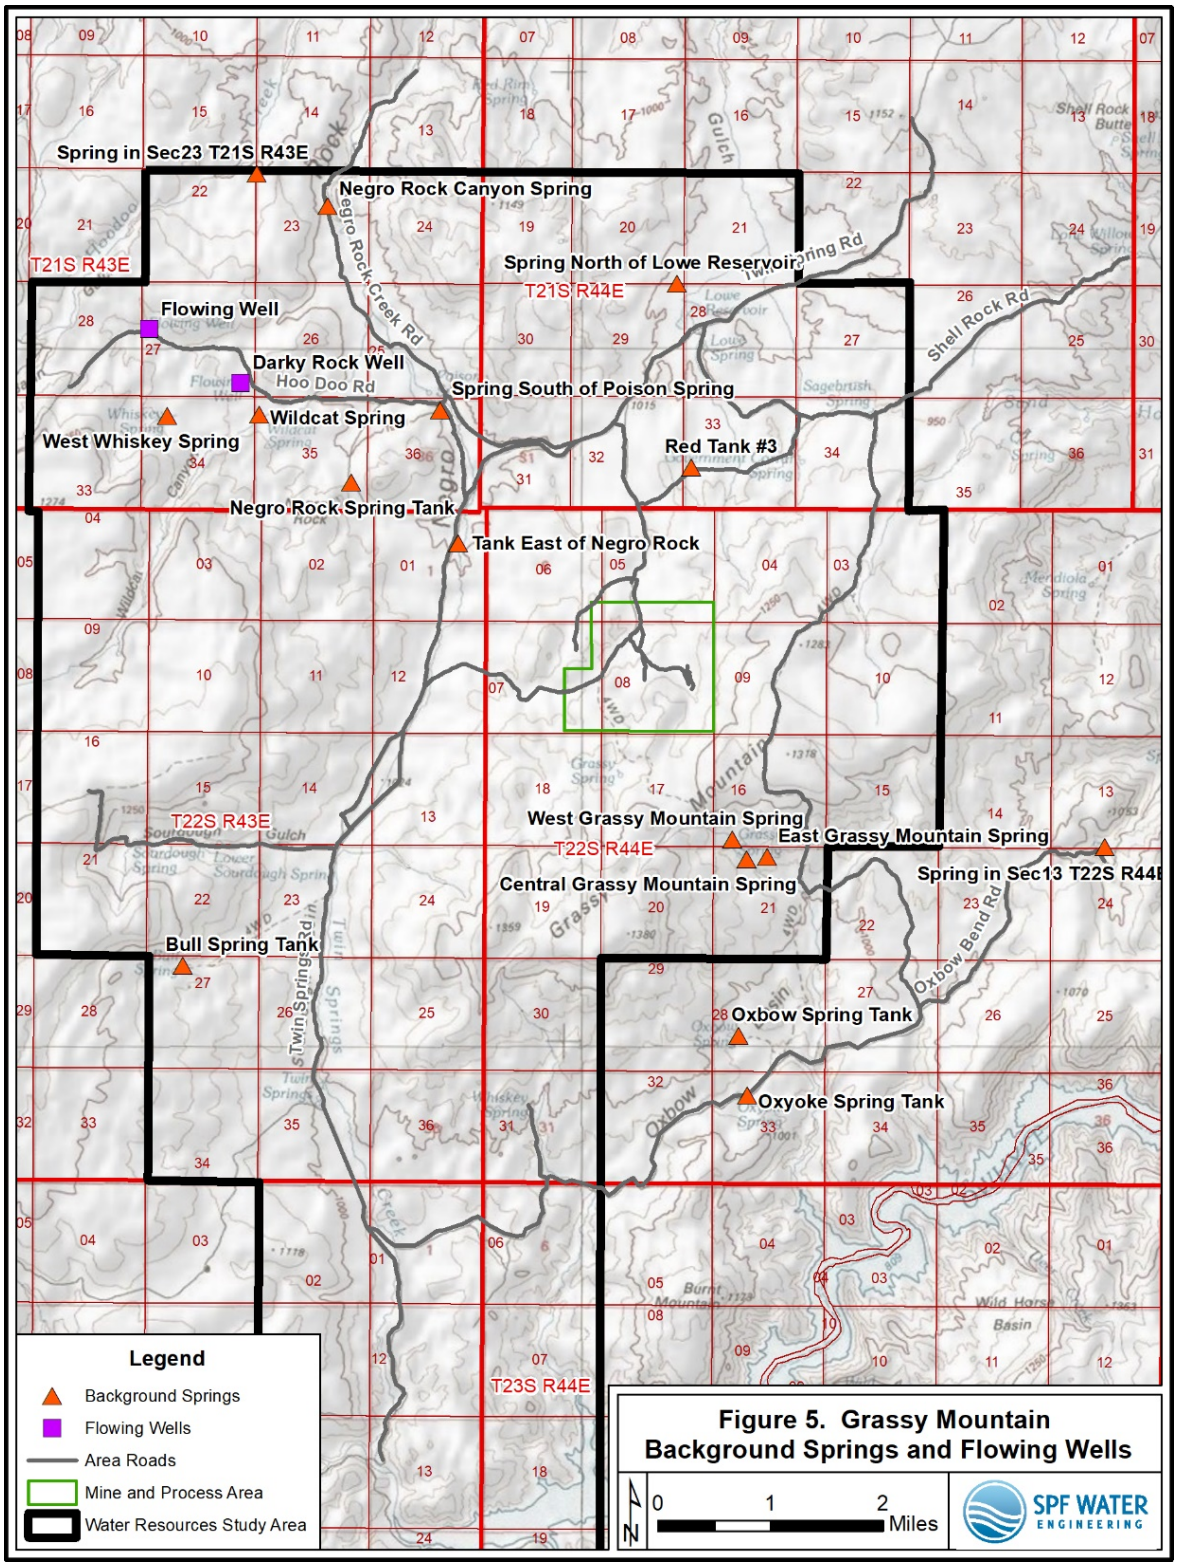

Figure 5. Grassy Mountain background springs and flowing wells

7. DATA COLLECTION METHODS

7.1. Overview of Methods

Standard hydrologic field procedures and methodologies were utilized to ensure accurate and reliable data collection. Sampling and monitoring procedures followed the guidelines detailed in the approved Work Plans. Where applicable, sampling procedures followed the ODEQ Field Sampling Reference Guide (ODEQ 2010) and the ODEQ Water Monitoring and Assessment Mode of Operations Manual (ODEQ 2009).

Quality assurance and quality control (QA/QC) are an important component of the monitoring program. QA/QC guidelines for the sampling event are described in the approved Work Plans and followed QA/QC protocols described in the ODEQ Water Monitoring and Assessment Mode of Operations Manual (ODEQ 2009) and the ODEQ Quality Manual (ODEQ 2011).

Specific QA/QC methods included collection of equipment blanks, transfer blanks, and duplicate samples. The laboratory performed internal QA/QC procedures, with results from each quarter included in the Level 2 analytical report prepared by the laboratory. The Level 2 analytical report also includes a case narrative, analytical results, data qualifiers, sample receipt checklist, and chain of custody forms. The Level 2 analytical report for each event was submitted to the TRT following each event and copies are included in Appendix H.

To ensure consistency, data collection forms were developed and utilized for recording field data and documenting equipment calibration procedures. Copies of the completed field forms from each quarterly sampling event are included in Appendix J. Data collection forms were transmitted to the TRT in a PDF format following each quarterly sampling event.

A brief overview of sampling procedures is described in the Sections below. Detailed sampling is provided in the Work Plans.

7.2. Description of Sampling Sites

Monitoring wells were described on field sampling forms (Appendix J), including casing diameter, casing height, completed depth, a description of the water level measurement point and well condition. Spring sources, sampling points, and associated stock tanks or ponds were described on sampling forms (Appendix J). Well water level measurement points and spring sampling points have been photographed. Additional photographs of every spring were taken during each sampling event to document flow conditions. Photographs were provided in the quarterly TRT submittals.

The locations and elevations (ground surface and measurement points) of monitoring wells and baseline springs were identified using survey-grade GPS by CK3 LLC in early May 2014. The coordinates and measurement point elevations are listed in Table 2 below, in State Plane Coordinates Oregon South International Feet, NAVD 88. For the

new monitoring wells, locations were surveyed prior to well construction. Final surveys of these wells are anticipated in the future.

Background springs have been located using a non-survey grade GPS unit, and coordinates are listed Table 2 in below.

Type	Site Name	Northing (ft, OR State Plane South)	Easting (ft, OR State Plane South)	MP Elevation (ft asl)

Table 2. GPS Coordinates Background of Wells and Springs

7.3. Water Level Measurements

At each of the monitoring wells the static water level was measured and recorded prior to purge pumping (if sampled) using a calibrated or non-stretch electric-line well sounder. To ensure consistency of water level measurements, measurement points were clearly identified on both the sampling form and physically on the well casing. Water level data (raw and calibration-adjusted) for each quarter are discussed in Section 0.

During the 1st and 2nd Quarter events in 2013, the static water level in a well was measured immediately before pumping that well, but interference effects from pumping nearby wells were not anticipated. An evaluation of continuous water level data following the 2nd Quarter download of the transducers installed in monitoring wells GW-1 and GW-4 revealed interference effects from nearby wells (PW-1 and PW-4). Therefore, during the remaining sampling events, wells that were in close proximity to each other (i.e. less than 500 feet) were measured for static water level prior to purge pumping nearby wells to eliminate any interference effects.

7.4. Continuous Water Level Measurements

Recording water level pressure transducers were installed in GW-1, GW-2, and GW-4 on March 26, 2013, during the 1st Quarter sampling event. The transducers are suspended in each well from stainless steel cable that is attached at the well head. Transducers were temporarily removed from the wells for downloading during each subsequent quarterly event. Immediately after removing the pressure transducer from a well, the static water level was measured using a calibrated or non-stretch electric-line well sounder. This static water level measurement, along with the pressure transducer reading (height of water above the transducer), was used to establish the depth of the pressure transducer relative to the top of the well casing. To obtain an accurate height of water above the transducer, the raw pressure data downloaded from the transducer was corrected for variations in atmospheric pressure using barometric data collected from a centrally located barometric pressure transducer installed in GW-1.

Once the depth of the pressure transducer is established, then all prior transducer readings are converted to static water levels measured relative to the top of the well casing. Pressure transducers were downloaded on a quarterly basis, and each download coincided with a manual water level measurement to re-calculate pressure transducer depth.

Following the download of the transducers during the 2nd Quarter of 2013, interference effects were observed in GW-1 and GW-4. Therefore, static water levels taken during the 1st and 2nd Quarters in 2013, taken after and influenced by purging nearby wells, cannot be reliably used to establish the depth of the transducer. During the remainder of the sampling, any interference was mitigated by measuring static water levels prior

to purging nearby wells, so these measurements can be used to determine transducer depth and calculate static water levels.

The continuous water level data were collected at 1-hour intervals between the 1st Quarter and 2nd Quarter sampling events of 2013. To comply with the specific requirements of the approved Work Plans, the sampling interval was changed to 30 minutes during the 2nd Quarter sampling event of 2013.

Specific information on each transducer install is provided below:

7.4.1. GW-1 Water Level and Barometric Pressure Transducers

Solinst Levelogger Edge (Model 3001) and Barologger Edge (Model 3001) pressure transducers were installed in GW-1. The Levelogger has a full-scale measurement of 32.8 feet (10 meters) and was installed on stainless steel cable to a depth of approximately 68 feet below ground level. The Barologger was installed in GW-1 at approximately ground level to measure atmospheric pressure, which is used to correct water level observations for the effects of atmospheric pressure.

7.4.2. GW-2 Water Level Transducer

A Solinst Levelogger Edge (Model 3001) pressure transducer was installed in GW-2. The Levelogger has a full-scale measurement of 32.8 feet (10 meters) and was installed on stainless steel cable to a depth of approximately 178 feet below ground level.

7.4.3. GW-4 Water Level Transducer

A Solinst Levelogger Edge (Model 3001) pressure transducer was installed in GW-4. The Levelogger has a full-scale measurement of 32.8 feet (10 meters) and was installed on stainless steel cable to a depth of approximately 97 feet below ground level.

7.5. Spring Flow Measurement

The flow from each spring was measured where a suitable location for measuring flow existed. Typically, this location was a pipe from the spring that terminates at a stock tank. Flow was measured using a container of known volume and a stopwatch. Flow measurements were taken without altering the spring or disturbing the area around the spring. Spring flow measurements are presented in Section 9.1.

7.6. Water Quality Analytes

A list of water quality analytes was approved in the Work Plans. The analytes include primarily metals (total and dissolved) and general geochemical parameters. During the 2013 sampling period, changes were made to the list of analytes as described below:

- Total and dissolved uranium were added to the analyte list following the 1st Quarter sampling event at the request of the TRT.

- Following the 1st Quarter sampling event, the TRT approved the substitution of combined nitrate+nitrite for nitrate and nitrite due to the difficulty in meeting the 48-hour hold time for nitrate and nitrite (Lynch 2013).
- The TRT approved removing inorganic arsenic from the list of analytes (Lynch 2013).
- The final approved list of water quality constituents is included in Table 3 along with the laboratory testing method, the laboratory detection limit, and the reporting limit. For metals, samples for both total and dissolved metals were collected. For the other parameters, only total samples were collected. The preservatives used by the laboratory and the recommended holding times for each testing method are summarized in Table 4.

Parameter	Laboratory Method of Analyses	Detection Limit	Reporting Limit	Sample Type
Aluminum, Al	EPA 200.7	0.03 mg/L	0.15 mg/L	total and dissolved

Table 4. List of Water Quality Analytes, Hold Times, and Preservatives

7.7. Pump Installation and Sampling Manifold

7.7.1. Permanent Pumps

To eliminate the potential for cross contamination of water quality samples, permanent pumps were installed in all quarterly sampled monitoring wells with the exception of 59760, Bishop, and PW-1 which have existing pumps and Prod-1 which is an artesian well. The new monitoring wells GMW17-32 and GMW17-33, along with 59762, were sampled during test pumping in accordance with the Final Work Plan for Grassy Mountain Monitoring Wells (SPF 2016b).

Installation of the eight dedicated pumps occurred prior to the 1st Quarter 2013 sampling event. Detailed information on these pumps is provided in the Work Plans and recorded on the field forms, including motor horsepower, design flow and head, drop pipe diameter, and setting depth. Sanitary well seals and water level sounding tubes were also installed at the time of the pump installations.

Prior to installation of the permanent pumps, all of the pumps, drop pipe, and sounding tubes were cleaned with a non-phosphate detergent and rinsed with deionized water. An equipment blank was collected from one of the pump setups by pumping from a 30-gallon container of deionized water. The equipment blank was collected to evaluate the effectiveness of the decontamination procedure and to assess any potential contamination resulting from the pump and associated equipment. A transfer/equipment blank was also collected directly from the 30-gallon container of deionized water to determine if the deionized water was contaminated prior to pumping through the equipment. Results are presented in Section 10.4.

7.7.2. Sampling Manifold

To allow for water quality sampling directly from the pump discharge, a two-part sampling manifold was connected to the pump drop pipe above the casing; see Photo 1 for a photograph of a typical installation.

The laboratory sampling portion of the manifold is dedicated to each monitoring well and consists of a Schedule 80 PVC tee, with the horizontal leg fitted with a PVC ball valve and barbed plastic fitting. Disposable silicone tubing was connected to the barbed fitting for filling sample bottles during water quality sampling; additionally, a 0.45-μm disposable filter was attached to the end of the tubing for collection of filtered samples.

The field sampling portion of the manifold is also PVC and connects to the top leg of the PVC tee. This non-dedicated portable apparatus was used for the sampling of each pumped quarterly sampled well. The field sampling apparatus allows for measurement of field water quality parameters directly from the pump discharge and also provides an outlet for bypass and purge flows from the pump. The field sampling portion of the manifold was only used for measuring field water quality parameters; the water collected for laboratory analyses was diverted upstream at the PVC tee at the well head.

For the wells sampled during test pumping (GMW17-32, GMW17-33, and 59762), similar sampling manifolds were used that allowed for field water quality sampling and laboratory water quality sampling.

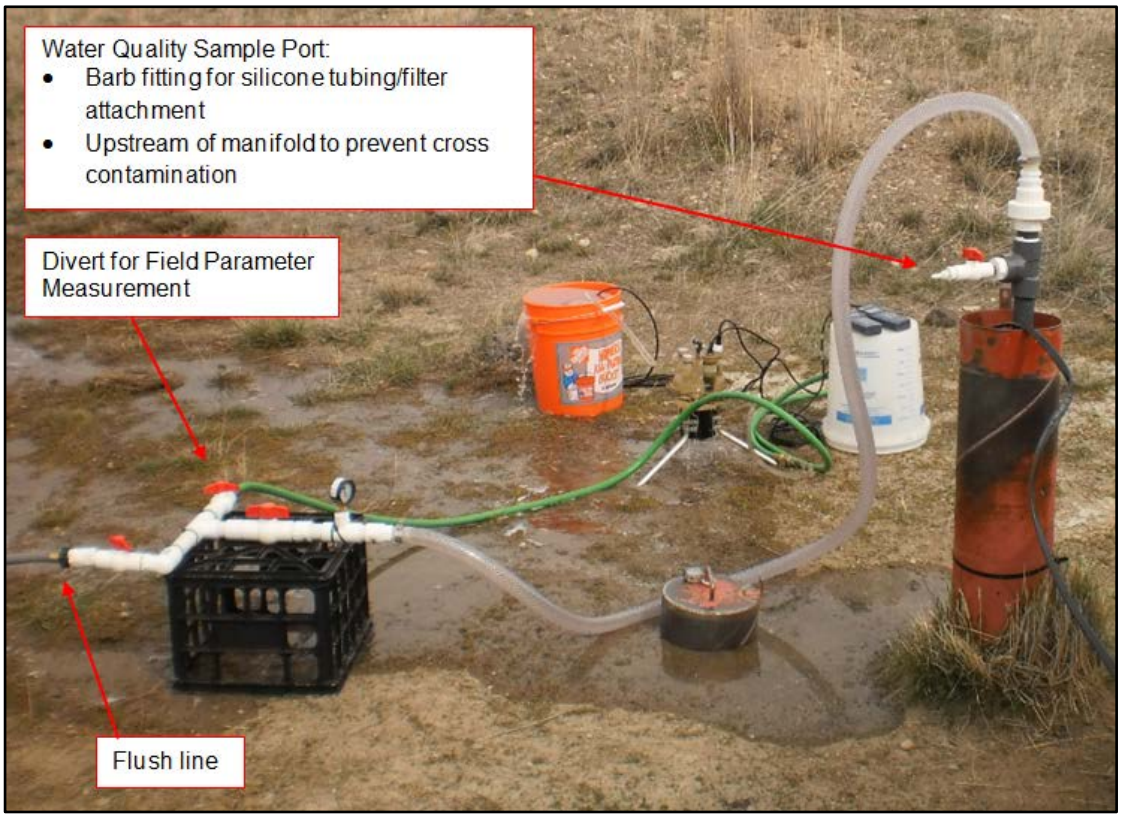

Photo 1. Discharge testing manifold

7.8. Monitoring Well Water Quality Data Collection Method

7.8.1. Purge Pumping

All of the monitoring wells were purged a minimum of three (3) casing volumes of water from the well prior to sampling; purging is a standard practice to remove stagnant water prior to ground water sample collection. Purge water was discharged to waste at the well site. During purge pumping, the pumping rate was measured using a five-gallon bucket and stopwatch. Pumping rate and volume were recorded on the field data collection form (see Appendix J). Additionally, field water quality parameters were measured as described in Section 7.8.2 and water quality samples were collected as described in Section 7.8.3. The appearance and odor of the purged water were also

noted. The well Prod-1 continuously flows by artesian pressure, this well was not purged and samples were collected directly from the artesian flow.

7.8.2. Field Water Quality Parameters

Purge water was discharged from the pump into the sampling manifold and through a Geotech multiprobe flow container, which allows for continuous measurement of field parameters (pH, temperature, electrical conductivity, and specific conductance) without significant aeration of the sample. These field parameters were monitored continuously during purging to ensure parameters were stable prior to sampling. Parameters are considered stable when consecutive measurements taken one (1) casing volume apart meet the following conditions: temperature within one (1) degree Celsius, pH within 0.3 standard pH units, and specific conductance measurements within 10% of each other (ODEQ 2009). Dissolved oxygen was measured in a separate purge water container (clean plastic bucket). At least three measurements of field water quality data were recorded on the data collection form.

The field equipment that was used for measuring field water quality parameters is listed below, along with the equipment calibration procedure[4]. Personnel performing equipment calibration were adequately trained. Results of calibration were recorded on calibration forms included in Appendix J.

- The pH (S.U.) was measured using a YSI EcoSense Model pH100 meter. Calibration was performed according to manufacturer recommendations on the morning of each sampling day. A 2-point calibration was performed using pH 4, 7, or 10 standard solutions.
- Electrical Conductivity and Specific Conductance (SC, µS/cm @ 25ºC) were measured using a YSI EcoSense Model EC300 meter. Calibration was performed according to manufacturer recommendations using a known standard on the morning of each sampling day.
- Temperature (°C) was measured using the YSI Model EC300 meter.
- Dissolved Oxygen (mg/L) was measured using an OxyGuard Handy Polaris 2 Portable DO meter. This DO meter was automatically calibrated if the initial dissolved oxygen saturation reading was below 100%.

7.8.3. Water Quality Sample Collection

Water quality samples were collected following purging with permanent dedicated pumps using the sampling manifold described in Section 7.6.2. A piece of disposable silicone tubing was connected to the dedicated barbed fitting for collecting samples. This tubing was used once and then discarded. For dissolved samples, samples were filtered in the field using a disposable high-capacity field filter with 0.45 µm membrane (Geotech dispos-a-filter with Versapor membrane) connected directly to the disposable

[4] For GMW17-32, GMW17-33, and 59762, a YSI Pro-Plus was used for field water quality. The instrument was calibrated before use.

silicone tubing. Sampling from the continuously flowing artesian well (Prod-1) was conducted in the same manner as spring water samples; see Section 7.8.

Samples were collected in bottles supplied by the laboratory with the appropriate preservative as required by the testing method. Samples were taken by field personnel wearing nitrile gloves discarded after each use. Following collection, sample bottles were properly labeled with the Calico well name, date, time, and preservative; a notation was provided to show if the sample was field-filtered. The sample bottles were immediately packed in a cooler with ice packs. Samples were mailed to ACZ Laboratories (ACZ) in Colorado with proper chain of custody documentation. Copies of the chain-of-custody are included in Appendix H. This laboratory is accredited by NELAP (National Environmental Laboratory Accreditation Program) for water analysis. Analytical methods meet ODEQ reporting and detection limits.

7.8.4. Sample Preservation Practices

The State of Oregon's Field Sampling Reference Guide (DEQ86-LAB-0002-QAG) and corresponding EPA method guidelines recommend that samples not containing a preservative, those preserved with sulfuric acid, and those preserved with sodium hydroxide be cooled to and maintained between 0°C and 6°C until arrival to the laboratory for processing.

Due to ACZ receiving samples above the recommended temperature, revised sample preservation practices were proposed as required by the TRT (Lynch 2014a). The proposed practices included higher-grade ice chests along with expedited (UPS Next Day Air) shipping practices. The TRT approved the revised preservation practices (Lynch 2014b), and these were implemented prior to the 1st Quarter 2014 sample period. All subsequent samples arrived at the laboratory at the recommended preservation temperatures, between 0°C to 6°C. The new preservation practices were successful in maintaining samples below the recommended temperature threshold.

7.8.5. Quality Assurance / Quality Control

Field duplicate samples were collected at a 10% sampling frequency (one duplicate for 12 wells) during each sampling event for quality assurance purposes and to measure precision between samples. An equipment and transfer blank was collected from one of the permanent pump setups prior to installation. The QA/QC results are summarized in Section 10.4.

In addition to field QA/QC, ACZ performed internal QA/QC procedures described in the Level 2 analytical report prepared by the laboratory for each sampling event. The Level 2 analytical reports for each quarterly event are included in Appendix H.

At least two mercury transfer blanks were collected in the field during each quarterly sampling event and submitted to the laboratory for mercury analysis.

The EPA Method 1669 is the recommended procedure for collecting water quality samples for trace metals at EPA Water Quality Criteria Levels. This method is

performance based, and alternative procedures may be used provided that the collection and analysis of blank samples is used to verify the accuracy of sampling procedures. Method 1669 does not specifically address groundwater sampling using dedicated submersible pumps. Collection of the pumping system equipment blank and field duplicate blank and following the field sampling procedures described in the ODEQ Water Monitoring and Assessment Mode of Operations Manual (ODEQ 2009) was used to verify the accuracy of the sampling procedures.

7.9. Spring Water Quality Data Collection Method

7.9.1. Field Water Quality Parameters

Only springs with a minimum flow of ¼ liter per minute were sampled per the approved Work Plans; any flow less than that is considered unsuitable for collecting samples. For those springs that flow continuously, conditions were considered steady state and only one set of field parameters (pH, electrical conductivity, specific conductance, dissolved oxygen) were collected. Spring flow was collected in a 1-liter plastic bottle (or a graduated ¼-cup plastic container for low-flow springs), pre-rinsed with water from that spring. Flow measurements were accomplished without altering the spring or disturbing the area around the spring. The sensors for the pH meter, conductivity meter, and dissolved oxygen meter were rinsed with spring water and placed in the sample container. The same meters were used as for groundwater sampling. Readings were recorded once the measurements had stabilized.

7.9.2. Water Quality Sample Collection

Water quality samples collected from springs were analyzed for the same constituents as for samples collected from monitoring wells (see Table 3).

For non-filtered samples (non-metals), water quality samples were collected directly from each spring by placing sample bottles directly under the spring discharge pipe or other suitable sampling location. Spring conditions were considered steady state and samples were collected immediately following field water quality measurements.

For filtered samples (metals), a water sample was collected from the spring in a clean plastic container. A peristaltic pump (Geotech Geopump with easy-load pump head) and associated disposable silicone tubing was used to transfer the water sample from the container, through a disposable high-capacity field filter with 0.45-µm membrane (Geotech dispos-a-filter with Versapor membrane), and into the appropriate sample bottle obtained from the laboratory. The procedure followed the “in-line peristaltic pump filtration from a container” method described in the ODEQ Water Monitoring and Assessment Mode of Operations Manual (ODEQ 2009). Filtration equipment, including tubing and filter, was only used at a single site and then discarded.

Samples were collected in bottles supplied by the laboratory with the appropriate preservative as required by the testing method. Samples were taken by field personnel wearing nitrile gloves discarded after each use. Following collection, sample bottles

were properly labeled with the spring name, date, time, preservative, and whether or not the sample was field-filtered. The sample bottles were immediately packed in a cooler with ice packs. Samples were mailed to ACZ in Colorado with proper chain-of-custody documentation. Copies of the chain-of-custody are included in Appendix H.

7.10. Spring Water Quality Assurance / Quality Control

Field duplicate samples were collected at a 10% sampling frequency for quality assurance purposes and to measure precision between samples. For the purpose of duplicate sample collection, spring and surface water sites were grouped together since similar collection procedures were used for these sites. A maximum of fourteen (14) spring and surface water sites were sampled during any single quarterly event (2nd Quarter 2013), so one spring or surface water sample field duplicate was collected during each event. Duplicate sample results are presented in Section 10.4.

Equipment blanks were collected from the peristaltic pumping apparatus at a 10% sampling frequency, so one equipment blank was collected during each sampling event. Spring and surface water sample collection sites were grouped together since similar collection procedures were used for these sites. The equipment blank was collected by pumping deionized water from the sample collection container through the tubing and filter and into the sample bottle.

Water quality samples for non-filtered samples were collected directly from each spring, artesian well, and surface water site by placing sample bottles directly under the spring/well discharge pipe or immersing in the surface water body. Therefore, collection of transfer blanks at a 10% sampling frequency is appropriate, so one transfer blank was collected at a randomly selected spring or surface water site during each event. The transfer blank was collected by pouring a sample of deionized water from its original transport container directly to sample bottles. Results are presented in Section 10.4.

ACZ prepared a Level 2 analytical report for each sampling event describing internal QA/QC procedures and results. The Level 2 analytical reports for each quarterly event are included in Appendix H.

At least two mercury transfer blanks were collected in the field during each sampling event and submitted to the laboratory for mercury analysis.

8. WELL AND PIEZOMETER GROUNDWATER LEVEL MONITORING

8.1. Background

Baseline water level data collected from the monitoring well network are used in the following data analysis and interpretation. This section provides interpretation to address TRT request for information (Lynch 2014), including:

- Time series plots including hydrographs
- Nearby pumping effects based on responses recorded on hydrographs for wells GW-1 and GW-4
- Naturally occurring variables and trends

8.2. Well Hydrographs

Well hydrographs for hand measurements in shallow wells, transducer measurements in shallow wells, and deep VWPs are provided on Figures D1, D2 and D3 in Appendix D, respectively. The hydrographs on Figures D1, D2, and D3 in Appendix D have consistent horizontal and vertical scales to allow comparison of trends between wells. Note that the elevation intervals for Figures D1, D2, and D3 vary.

Individual well hydrographs for shallow and deep wells are provided below in Section 8.2 (in the subsection for each well). Vertical scales on these individual hydrographs vary, which may exaggerate trends for the purpose of discussion.

8.2.1. Shallow Wells

Groundwater level monitoring has focused predominantly on shallow (typically above 500 feet depth) wells, where the majority of wells are completed. A significant proportion of the proposed mining activities within the proposed Grassy Mountain Mine will also take place between the surface and 500 feet depth.

Approximately half of the shallow groundwater levels measured quarterly have remained relatively stable (i.e., typically within +/- one foot) during the monitoring period between 2013 and 2018 (Figure D1 in Appendix D). Of these wells, GW-5, GW-4, PW-4, 57-10, GW-2, and BLM remained stable with relatively flat or slightly upward trending water levels from 2013 through 2018 and minor fluctuations attributed to seasonal recharge. Wells 59770, 59763, 59764, GW-6, and 89-2 had a slight downward trend with minor recharge fluctuations.

Wells without stable trends are described below in sections 8.2.1.1. through 8.2.1.9. These wells exhibit fluctuations that appear to be responses to recharge from high-precipitation years, from pumping, or from drilling activities.

8.2.1.1. Well 59768

In 2015 and 2017, groundwater levels in well 59768 increased by approximately 2 feet and 7 feet respectively for brief periods during the First and Second Quarters of those

years. Levels declined to approximately previously measured elevations during the Third and Fourth Quarters (Figure 6). Based on the driller's well completion log, well 59768 was advanced to 25 feet and screened from 10 feet to 25 feet.

Weather data from a weather station near Kelsey Butte (Meso West, 2019) located approximately 35 miles northwest of the site shows the annual precipitation data for the from 2001 to 2018 (Figure 7). Water year 2017 had the highest amount of precipitation during the water level monitoring period, with 2015 being the second highest.

A lithologic description is not indicated on the well log. It appears the high-water years have a direct impact on the measured water elevation in this well, which could be due to its shallow completion. This well is located approximately one mile north of the proposed Grassy Mountain Mine.

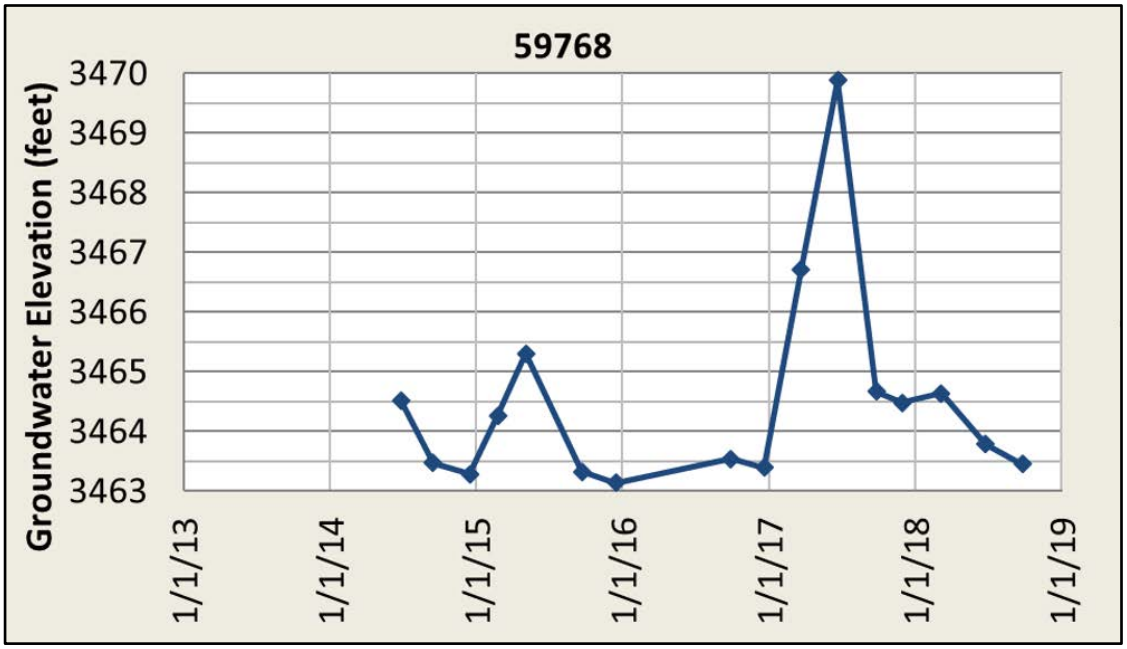

Figure 6. Groundwater hydrograph for well 59768

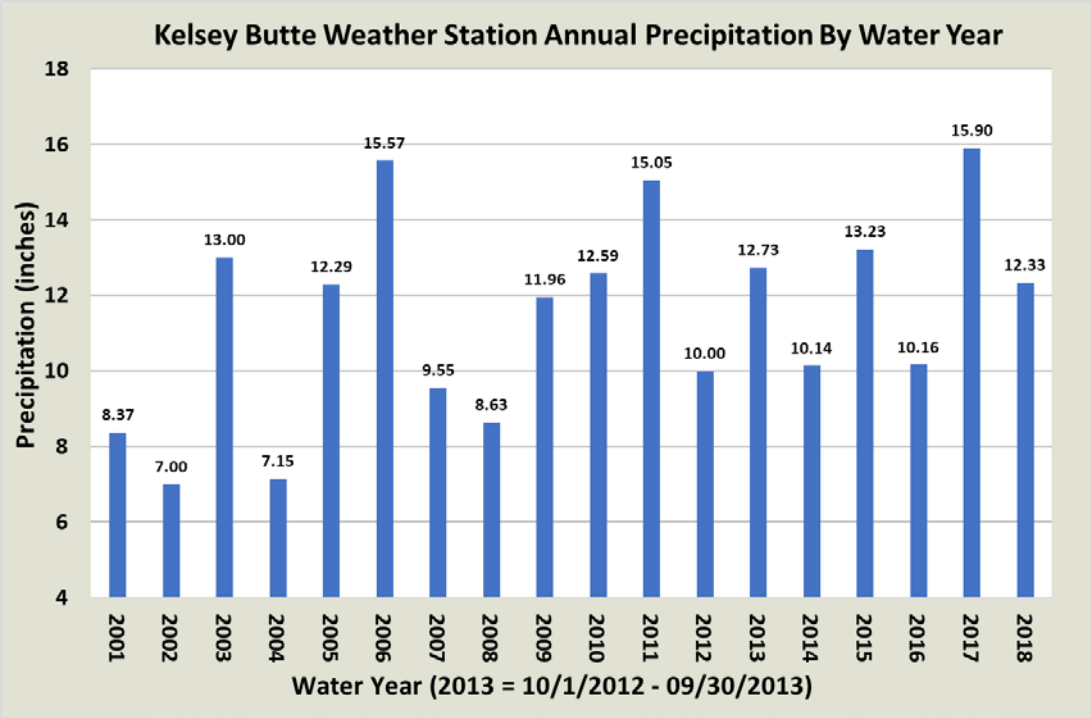

Figure 7. Kelsey Butte weather station annual precipitation by water year

8.2.1.2. Well 57-1

Groundwater levels in well 57-1 increased by approximately 18 feet between December 2015 and June 2017. It is significant to note that no water level monitoring was completed in this well between December 2015 and August 2016 sampling events. Groundwater levels decreased by approximately 3 feet between the Third and Fourth Quarter 2017 sampling events (Figure 8). The reason for the change is not entirely apparent; however, the large increase took place at the same time as the high precipitation period in 2017. According to records, this well was originally drilled to 765 feet, but screens were installed from 108 to 138 feet below ground surface. Well 57-1 is located approximately 1,300 feet from the western edge of the proposed Grassy Mountain Mine. The completion lithology was not indicated on the well log (Appendix C2).

After the 2nd Quarter 2018 measurement was collected, a slug test was performed on the well, as described in the 2nd Quarter 2018 water resources baseline data summary memo (SPF 2018d). The purpose of the slug test was to evaluate the integrity of the well and confirm that there was hydraulic connection to a water-bearing zone. The slug test involved pouring 1 gallon of de-ionized water into the well. That volume of water should have raised the water level in the well by over 12 feet. Instead, the water level dropped over 8 feet within 2 minutes and continued to decline by a total of 15 feet after 30 minutes. The water level was measured at a depth of 71.38 feet, about 14 feet lower

than the pre-test static water level, over 2 hours after the test began. The 3rd Quarter measurement was similar to that measurement (0.16 feet lower). The average static water level was at a depth of about 68 feet between September 15, 2014 and December 16, 2015, when water levels in the well were stable. Therefore, the 3rd Quarter water level measurement was about 3 feet lower than the "normal" static water level.

The higher than normal water level measurement observed between December 21, 2016 and June 22, 2017 is theorized to have been due to a blockage in the well that the slug test dislodged. The blockage might also have been related to a possible casing break, which would have allowed water level probes to pass out of the casing and into the annular space outside of the casing during the 2017 and early 2018 measurement events.

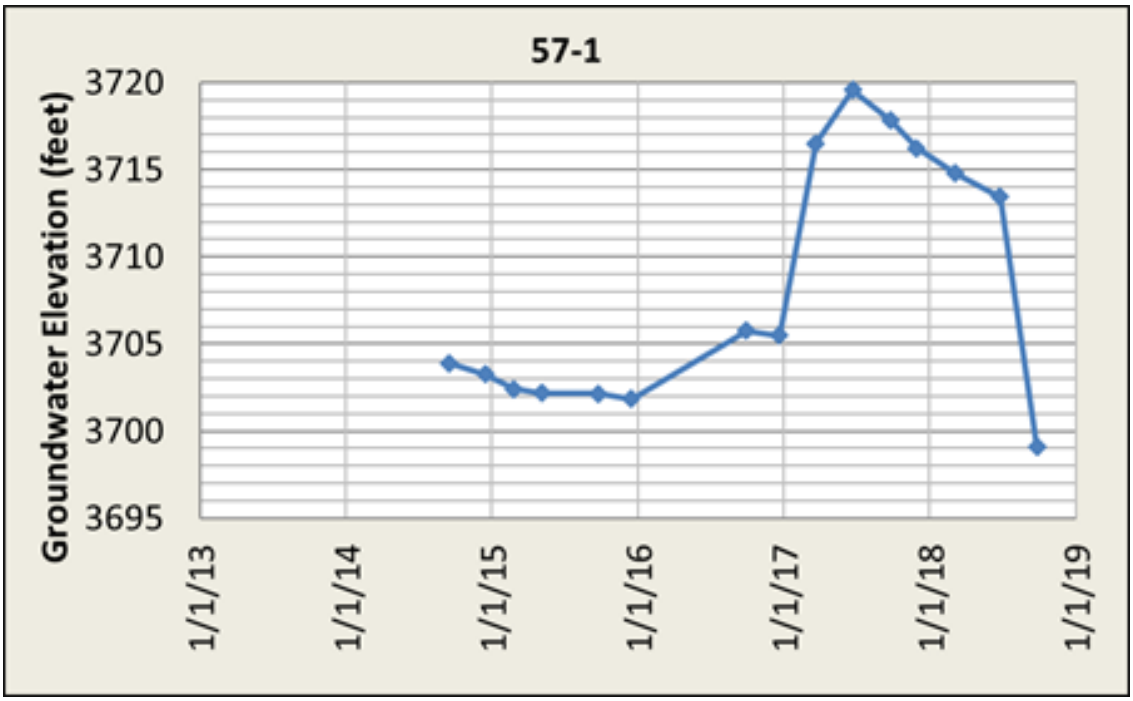

Figure 8. Groundwater hydrograph for well 57-1

8.2.1.3. Wells GW-1 and PW-1

Wells GW-1 and PW-1 seem to have a flat or slightly rising water level trend, which only varied during the pumping of PW-1 to support resource and reserve drilling activities (i.e., well construction water supply). PW-1 was used for drill water at various times between September 29, 2016, and March 22, 2017. The pumping rate and duration are not known, but the well is believed to be equipped with a pump capable of producing 20 to 30 gpm. The December 2016 monitoring event found that groundwater levels in wells GW-1 and PW-1 had declined by approximately 4 feet and 7 feet, respectively, from previous measurements. Water levels eventually rebounded to previous trends during subsequent levels (Figure 9). The decline and rebound

effects are attributed to intermittent pumping in PW-1. The clear hydraulic response in well GW-1, screened in gravel deposits from approximately 135 feet to 155 feet bgs, suggest a hydraulic connection exists based on pumping in nearby well PW-1. PW-1 was reportedly screened within a deeper portion of the aquifer, from 320 feet to 340 feet in unconsolidated clay and sand deposits and from 400 feet to 420 feet in sandstone. Wells GW-1 and PW-1 are approximately 100 feet apart.

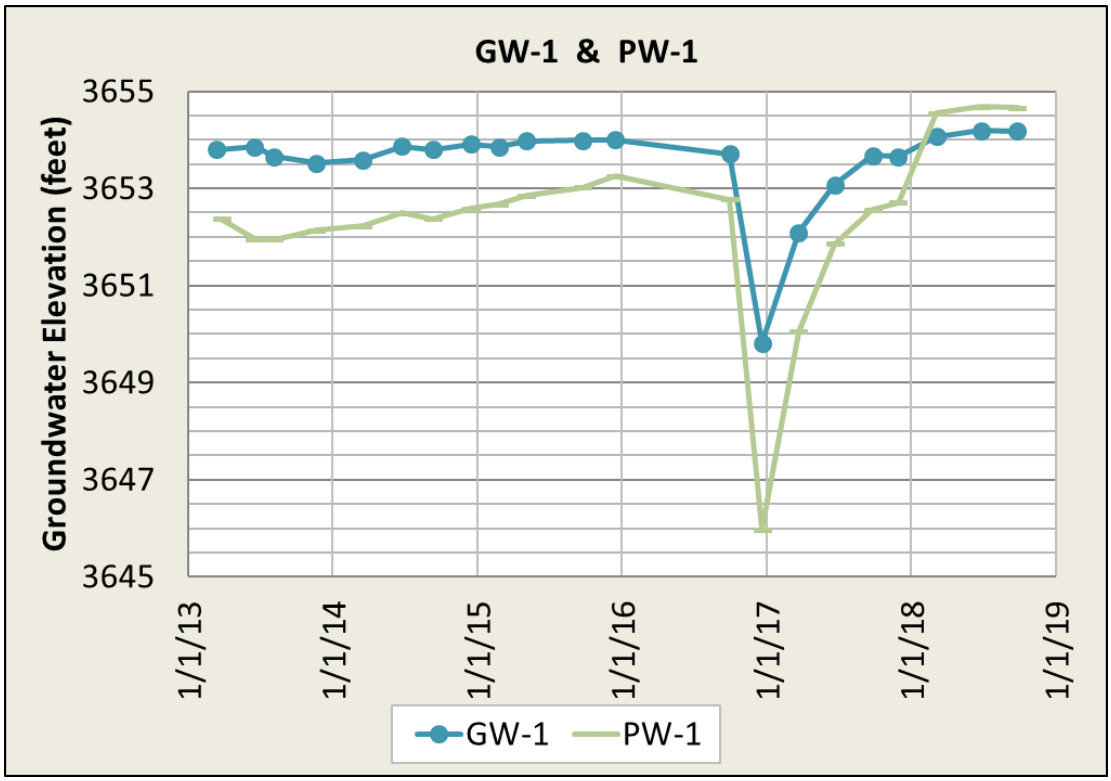

Figure 9. Groundwater hydrograph for wells GW-1 and PW-1

8.2.1.4. Well 26-092-915

Well 26-092-915 had a steady decline of approximately 0.75-foot per year from the start of monitoring in the first quarter of 2013 until the first measurement in 2017 when water levels increased 3 feet to approximately 0.4 feet above the initial measured water level in 2013 (Figure 10). The observed decline is likely due to below average precipitation between 2013 and 2017, with above average precipitation during the winter of 2017. This well is screened from 228 to 268 feet below ground surface in a borehole that was drilled to 915 feet. The lithology encountered is not reported, and information on the well seal is not known. This piezometer may be particularly sensitive to precipitation as a result of a shallow surface seal or lithology.

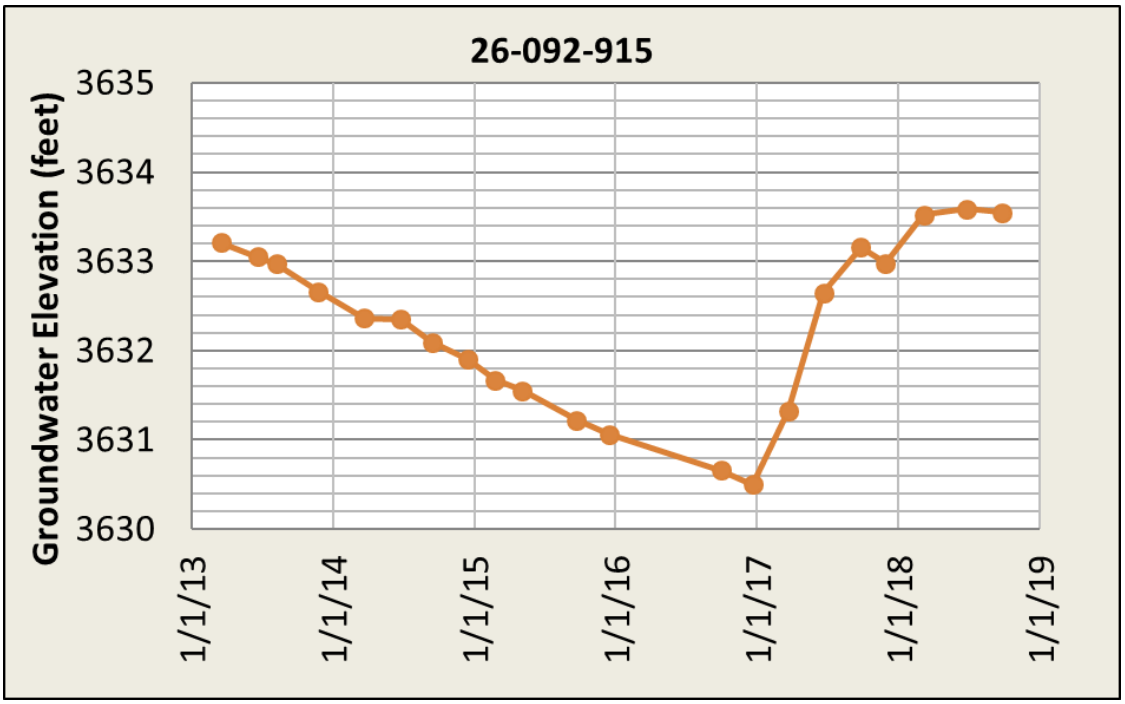

Figure 10. Groundwater Hydrograph for well 26-092-915

8.2.1.5. Wells 59760, 59761, and 59772

Wells 59760, 59761, and 59772 are completed in close proximity (220 feet) of each other and all show identical water level trends. The three wells are completed in fractured basalt approximately 1,000 feet southeast of the proposed Grassy Mountain Mine. Water levels (Figure 11) show steady declines of 0.5 foot per year interspersed by two recovery periods during the years 2014 (~1-foot recovery) and 2017 (~2-foot recovery). The recovery periods appear to be associated with winter precipitation. These wells are in close proximity to Schweizer Reservoir, a seasonal impoundment, which likely functions as a local source of recharge.

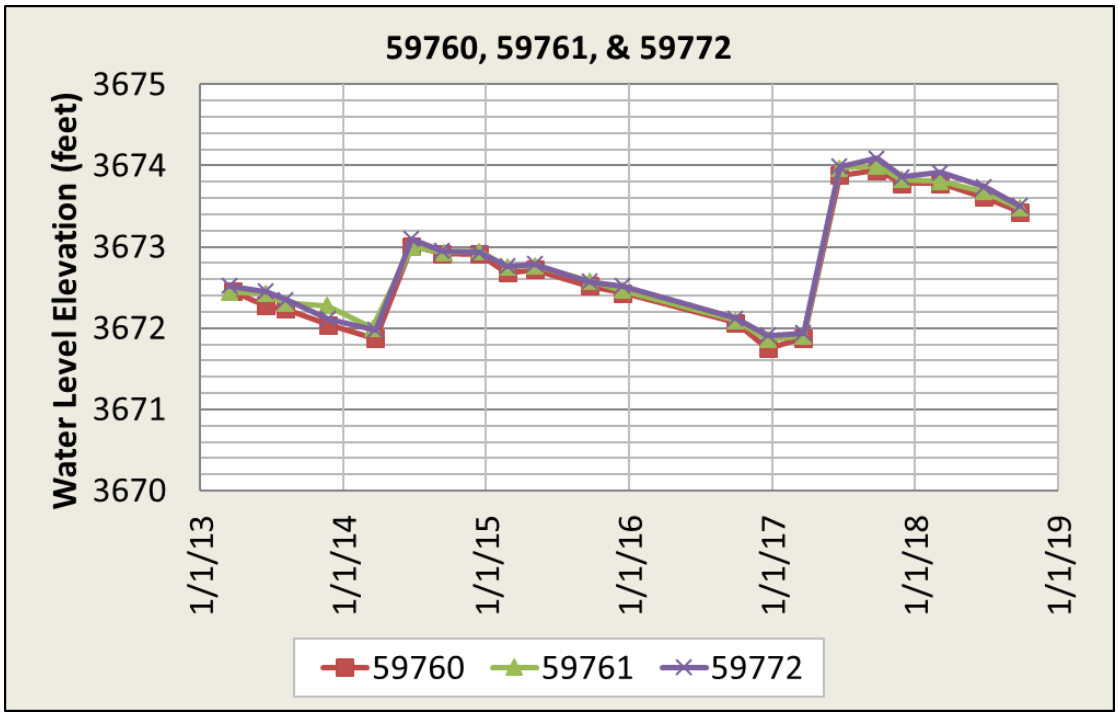

Figure 11. Groundwater Hydrograph for wells 59760, 59761, & 59772

8.2.1.6. Wells GW-3 and GMW17-33

Well GW-3 had a stable to very slowly rising water level from the start of monitoring in 2013 until the third quarter of 2017 (Figure 12). Between the hand measurements on 09/26/2017 and 11/29/2017, the water level began declining, with approximately 5 feet of decline in one year. The start of this 5-foot decline coincided with the drilling of GMW17-33, during which the driller noted first hitting water on 11/17/2017. On 11/29/2017 a transducer was installed in GW-3 for monitoring the water level during pumping tests of the 59762, GMW17-32, and GMW17-33. Between 11/29/2017 and 12/28/2017 (transducer removal) the transducer recorded a drawdown of only 0.39 feet, with no drawdown or recovery trends apparent from any of the aquifer tests. With no significant drawdown in GW-3 apparent from the testing of GMW17-33 (average flow rate of 25.8 gpm for 97 hours between 12/14/2017 and 12/18/2017) prior to the transducer being pulled on 12/28/2017, it is theorized that the initial drop in water level first detected on 11/29/2017 may have been caused by delayed effects from the drilling of GMW17-32.

In GMW17-32, water was first encountered on 8/25/2018. Up through the most recent quarterly monitoring (3rd quarter 2018), both GW-3 and GMW17-33 show an average decline of approximately 1.25 feet per quarter and 2.5 feet per quarter, respectively, with both wells drawing down approximately 2.5 feet in the last quarter alone (Figure 13).

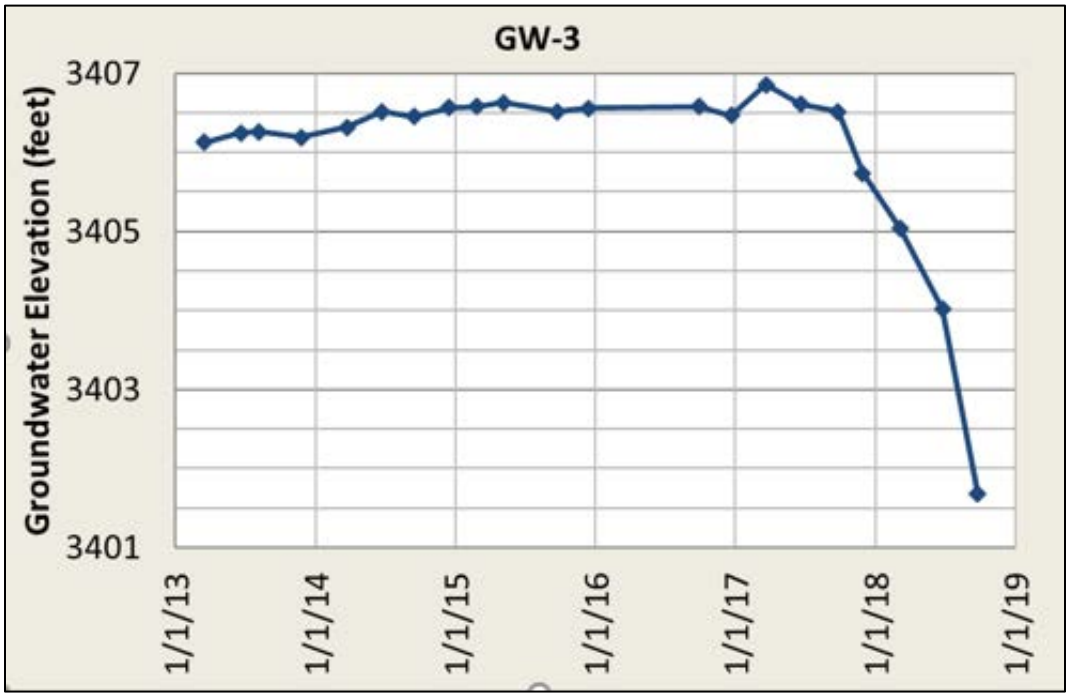

Figure 12. Groundwater hydrograph for well GW-3

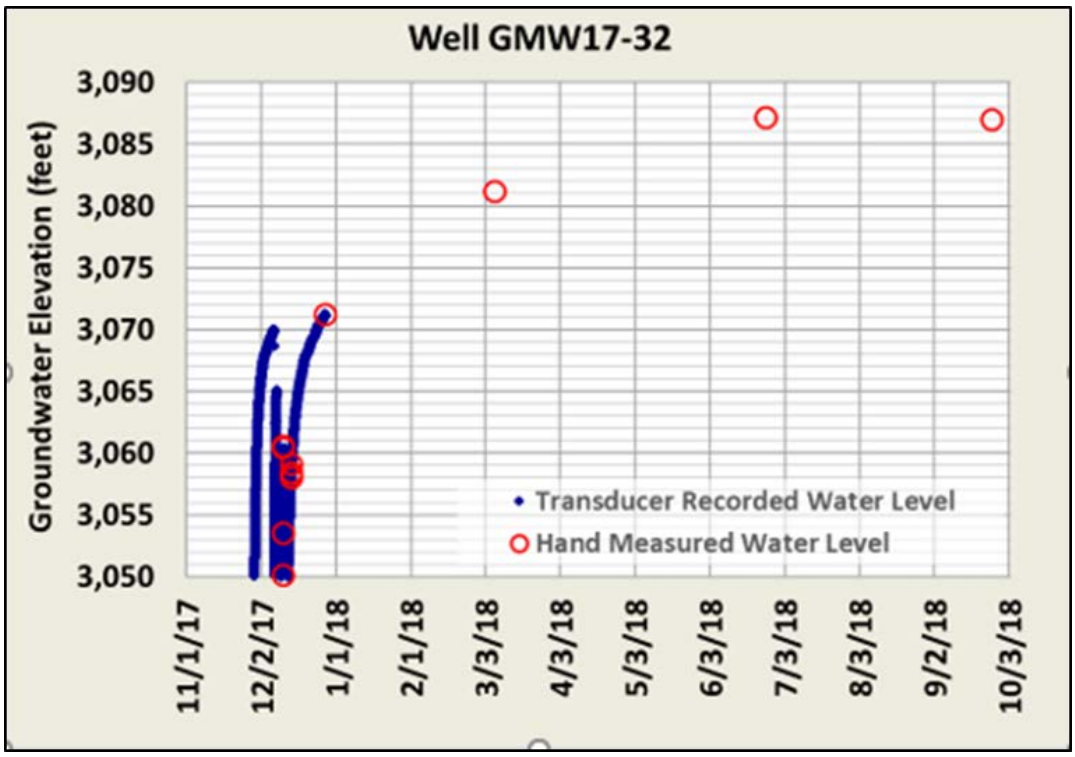

Figure 13. Groundwater Hydrograph for well GMW17-33

The slow continuous decline of these water levels, months after water being produced from the aquifer by test pumping, might indicate a compartmentalized aquifer with areas of low hydraulic conductivity that was influenced by test pumping. More likely, the continuous decline may suggest drainage from shallower compartment to a deeper compartment through a borehole or well, either GMW17-32 or another borehole drilled in the vicinity.

8.2.1.7. Bishop Well

The Bishop Well shows a slightly decreasing water level trend (Figure 14) with drawdown effects from the well being used intermittently for livestock watering.

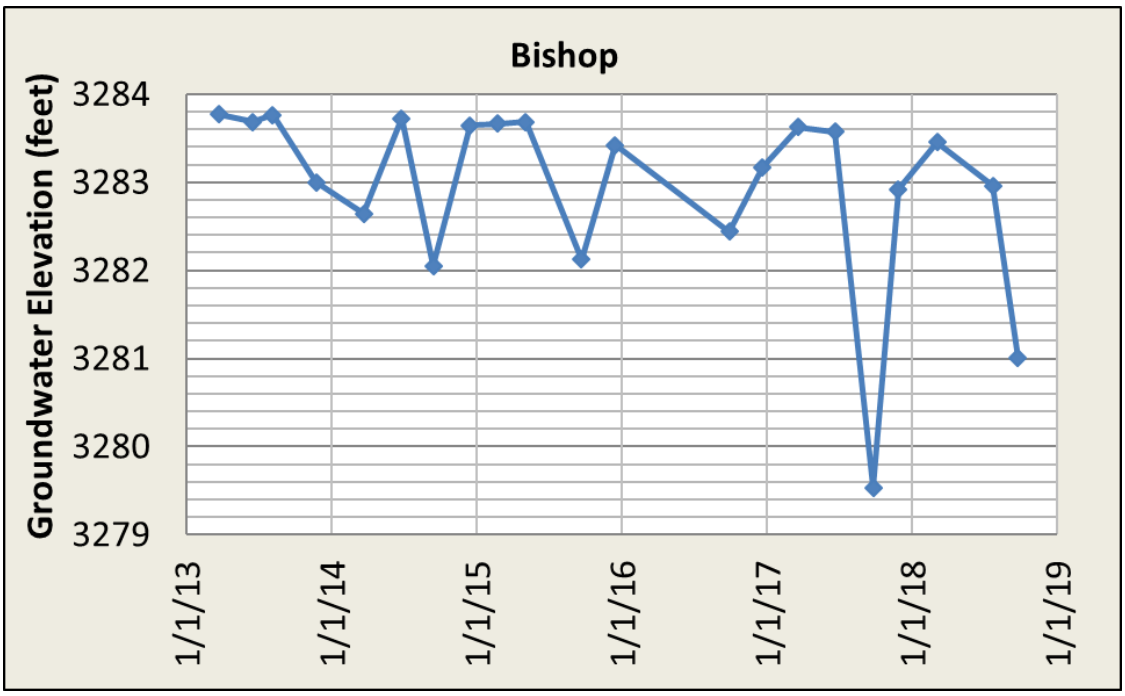

Figure 14. Groundwater Hydrograph for the Bishop Well

8.2.1.8. Well 59766

Since the initial monitoring in 2013, water levels in Well 59766 have declined approximately 3 feet (Figure 15). The trend of the decline looks similar to a drawdown curve except for a minor (0.34 foot) rise measured in March of 2017 (likely due to the high-water year). This well was drilled to 76.5 feet through multiple sand and clay layers, and screened from 25 to 45 feet. The monitoring well report indicates that the borehole was filled in with pellets and sand from 47 to 76.5 feet. It is possible that a higher aquifer zone is draining into a deeper portion of the aquifer, either within the screen section or from the screen section into the lower borehole.

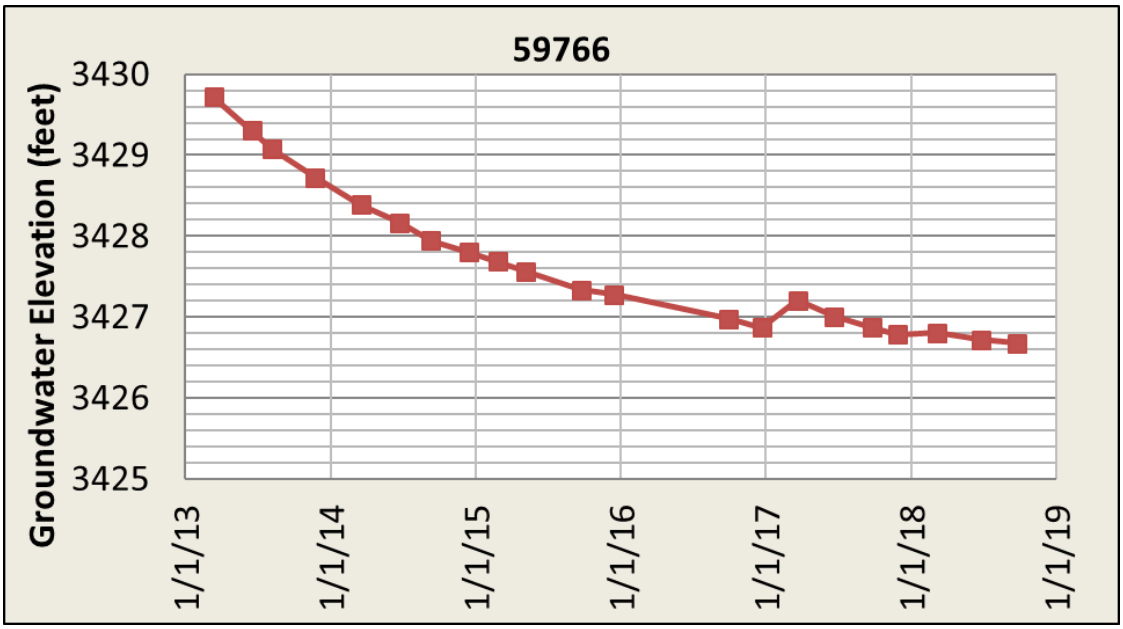

Figure 15. Groundwater Hydrograph for Well 59766

8.2.1.9. Continuous Water Level Data

Continuous water level data from wells GW-1, GW-2, and GW-4 are presented in Figure 16 for GW-1, Figure 17 for GW-2, and Figure 18 for GW-4. This data was obtained from pressure transducers installed during the 1st Quarter of 2013, corrected for barometric pressure effects. Early hand-measured water levels in GW-1 and GW-4 that are noticeably lower than the transducer data in 2013, are influenced by recently pumped nearby monitoring wells for sampling.

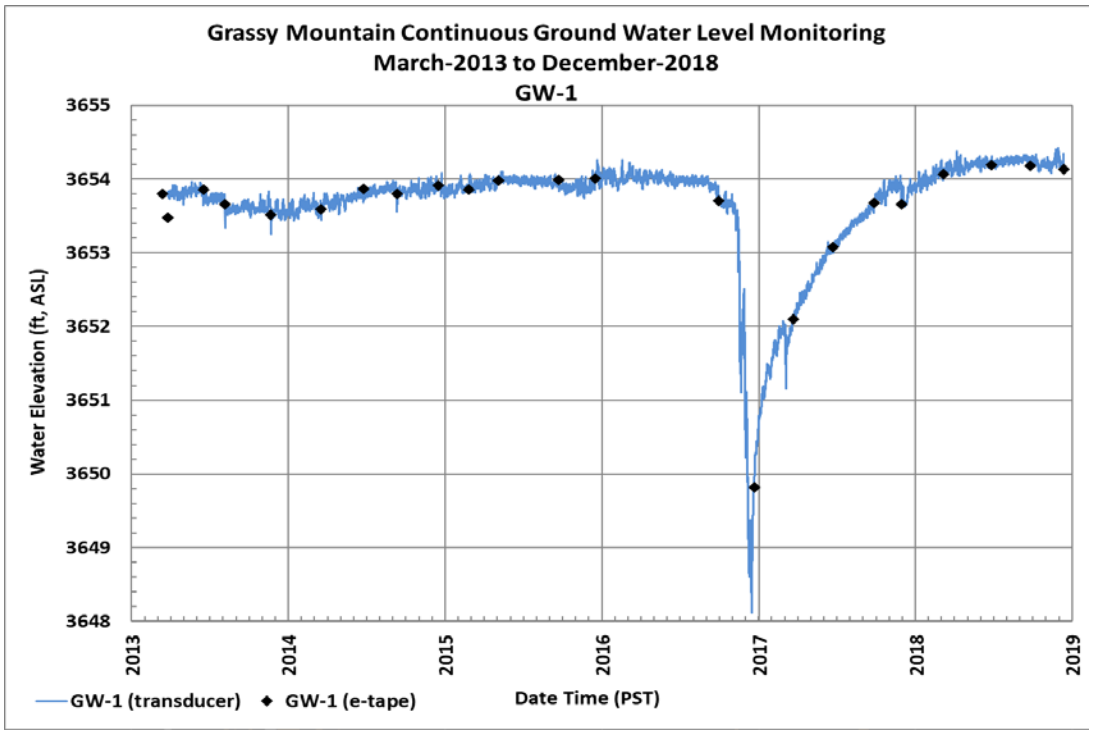

Figure 16. GW-1 Continuous Water Level Monitoring Plot

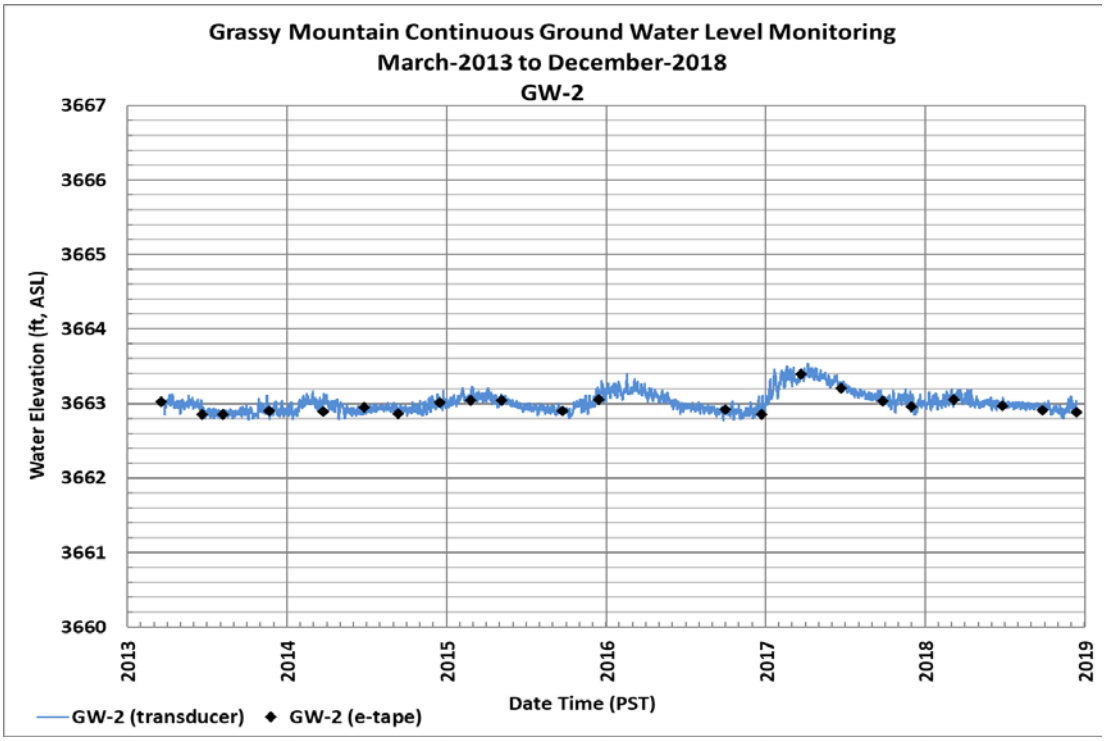

Figure 17. GW-2 Continuous Water Level Monitoring Plot

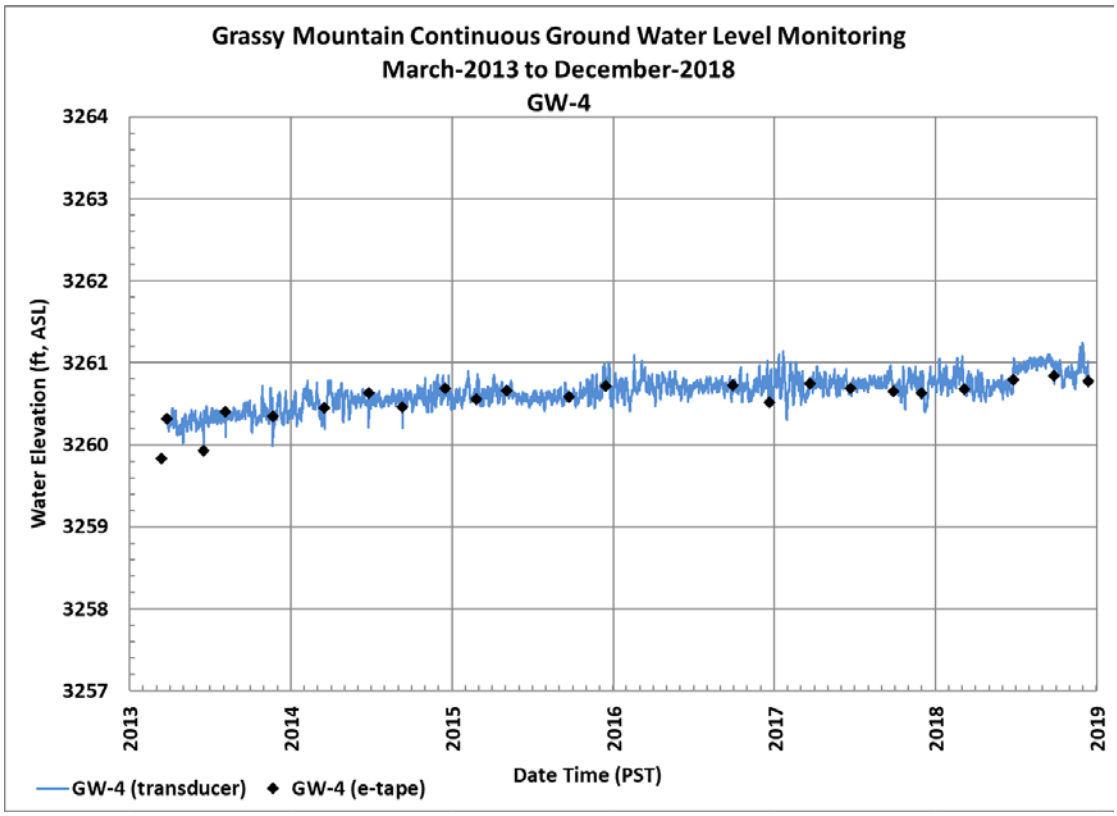

Figure 18. GW-4 Continuous Water Level Monitoring Plot

8.2.2. Deep Wells

Wells greater than 500 feet are considered deep. Deep water levels have been monitored in Well 59762 since 2013. More recently, water levels in Well GMW17-32 were monitored in 2018. Groundwater levels were also monitored using VWP sensors installed within the deposit at depths greater than 500 feet.

8.2.2.1. Well 59762

Groundwater levels in monitoring well 59762 have shown a gradual decline of approximately 1 foot in four years from 2013 to 2017 and a slow recovery from the 2018 test pumping which added an additional foot decline(Figure 19). It is possible that the observed decline is a result of slow leakage from the well screened interval downward due to vertical gradient. Another possible explanation is evaporation from the well exceeding infiltration.

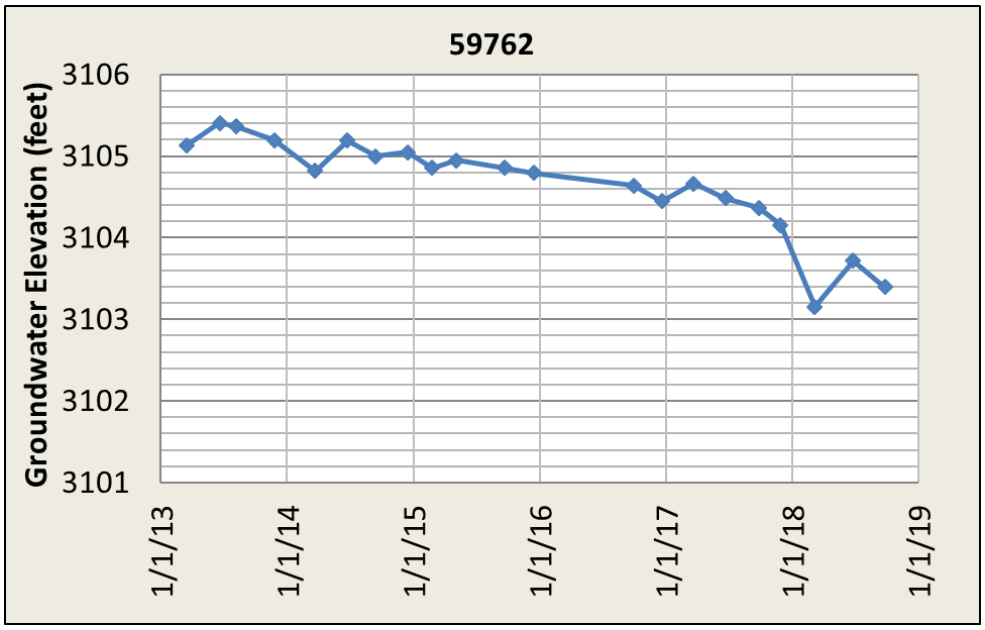

Figure 19. Groundwater hydrograph for Well 59762

8.2.2.2. Well GMW17-32

The 2018 groundwater levels in monitoring well GMW17-32 (Figure 20) appear to show a recovery response to drilling and test pumping that occurred in late 2017.

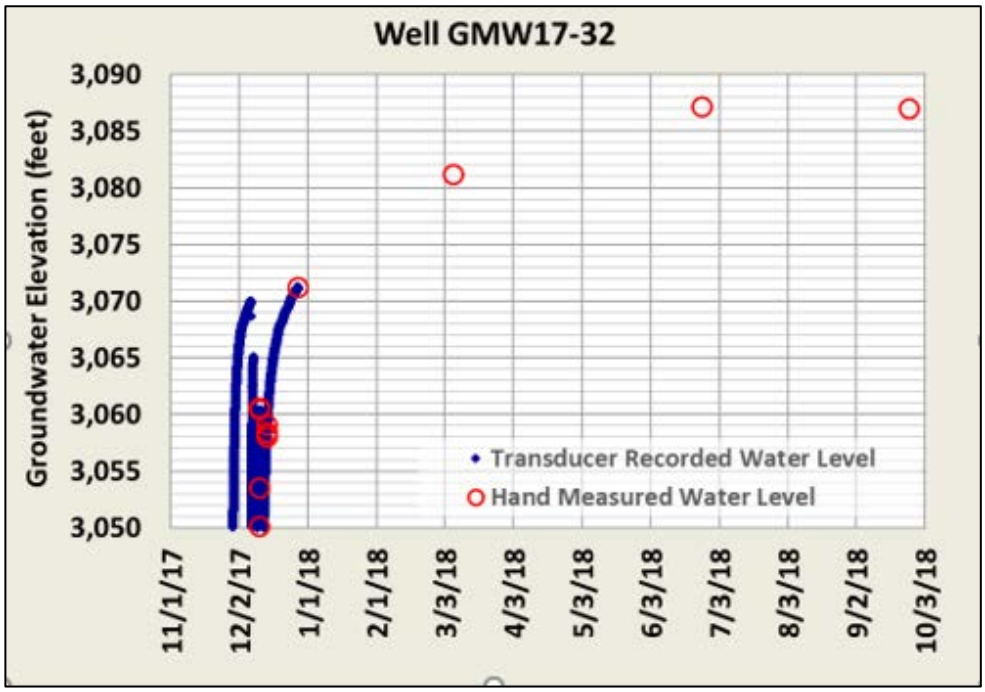

Figure 20. Groundwater Hydrograph for Well GMW17-32

8.2.2.3. Vibrating Wire Piezometers

A total of 15 VWP sensors were installed in five boreholes during the 2017 mineral resource and reserve program (three sensors per borehole) (Table C3 in Appendix C). Sensors were installed predominantly on the eastern side of the proposed Grassy Mountain Mine at shallow, intermediate, and deep intervals, intended to bracket the reserve ore body (SPF, 2017b). VWP installation was done in accordance with approved standard operating procedures (SPF, 2017a). Installation forms for the VWPs are also included in Appendix C.

Interpretation of the VWP pressure responses (supported by observations of the presence or absence of water during borehole advancement) indicates groundwater occurrence is discontinuous horizontally and vertically within the deposit area. Groundwater is interpreted to be present where positive pressure responses recorded by VWPs are within the sensor accuracy range, greater than approximately 0.4 pounds per square inch (psi).

Groundwater is encountered at elevations above, within, and below the deposit area at three of the five borehole locations at various depths: GM17-16-I, GM17-16-D, GM17-20-I, GM17-20-D, GM17-21-I, and GM17-30-I (Table C3 in Appendix C). VWP locations are shown on Figure 21. A summary of interpreted VWP water level elevations are shown Figure 22.

Individual hydrographs for the six VWPs that encountered groundwater are provided in Figure D3 in Appendix D. The hydrographs from GM17-20-I, GM17-20-D, GM17-30-I show single event data gaps where data was not able to be downloaded during one quarterly event. The data gaps are due to a malfunction in the datalogging equipment. The problem has been fixed and there have not been any more issues with data download since June 2018. The data gaps are not considered problematic for water level data interpretation as the data before and after the gap are consistent.

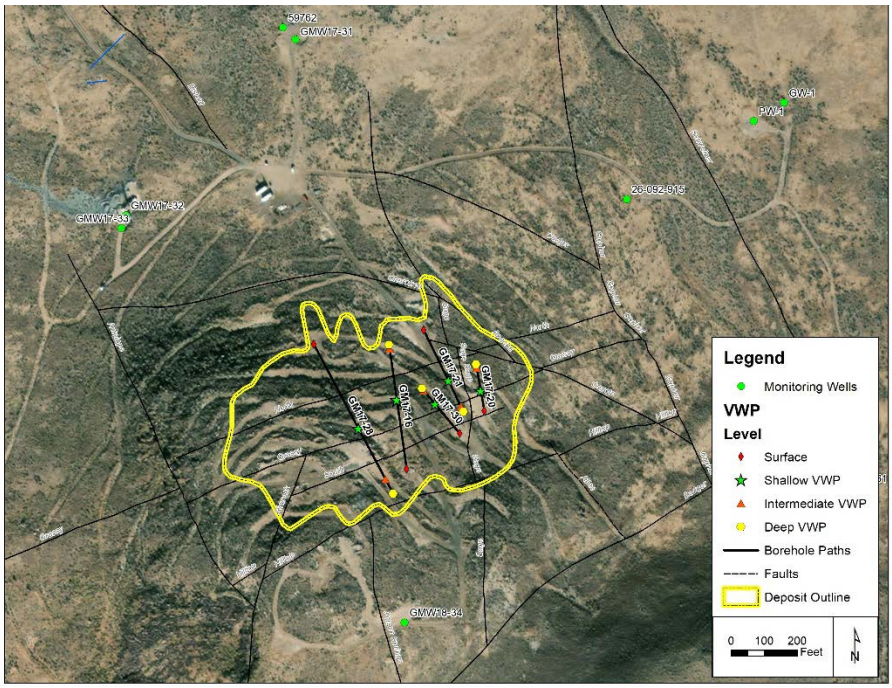

Figure 21. Borehole and VWP sensors location map

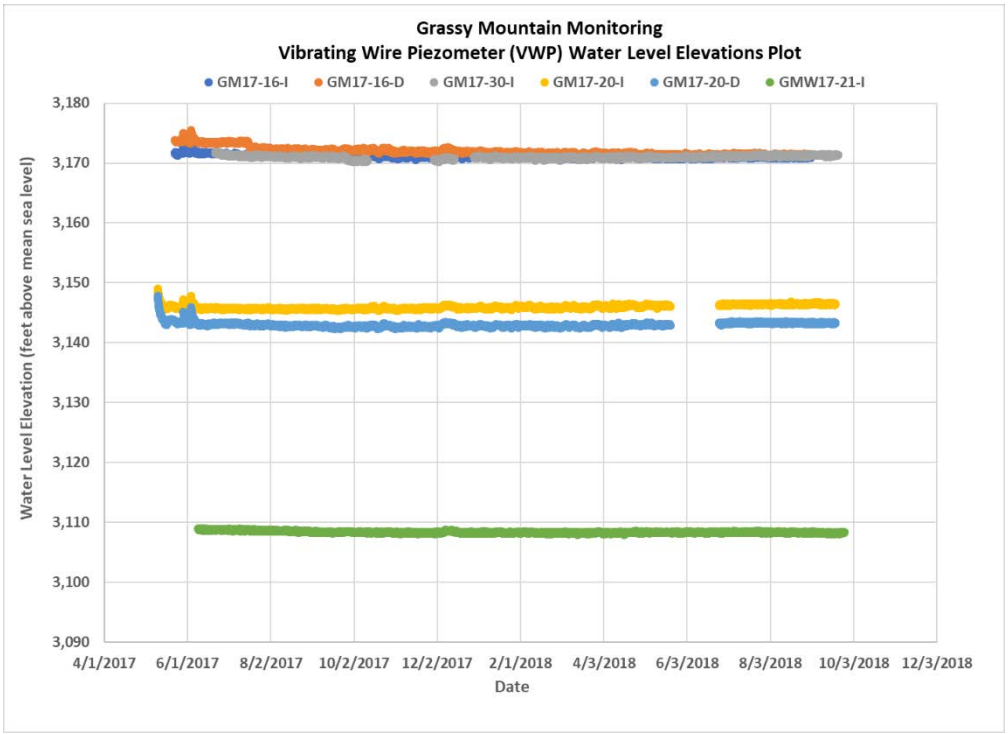

Figure 22. VWP sensor hydrographs (estimated elevations)

8.3. Groundwater Contour Maps

Groundwater elevation (potentiometric) contour maps for the shallower completed monitoring wells were created using the mean water level data from each year (2013 – 2017) and for each quarter in 2017 (Appendix E). The potentiometric surface maps were created in the two-dimensional mapping software utility Surfer® (Version 8). The groundwater flow direction is towards the northwest with no major changes in the contour lines except for 2013 where GW-5, 59768, 57-10, and 57-1 were not included (not monitored till 2nd Quarter 2014).

9. SPRING AND ARTESIAN WELL FLOW

The spring and artesian well flow data collected as part of this baseline report is used in the following data analysis and interpretation. This section provides interpretation to address TRT request for information (Lynch 2014c), including:

- Time series plots
- Naturally occurring variables and trends

9.1. Springs

Monitoring of spring flows has been conducted at Grassy Mountain to fulfill baseline characterization efforts. Spring monitoring has included two separate location sets: 'baseline' consisting of eleven (11) individual spring sites, and 'background' consisting of sixteen (16) individual spring sites (refer to Table B2 in Appendix B). Based on field observations during monitoring, most of the springs appear to be used for stock watering purposes.

Flow rates measured between 2013 and 2018 are summarized for springs grouped by flow rates that are consistently less than 1 gpm (Figure 23), flow rates that are consistently greater than 1 gpm (Figure 24), and flow rates that fluctuate between less than and greater 1 gpm (Figure 25). A table of all monitored spring flows is presented as Table F6 in Appendix F.

Overall, flow rates have remained relatively stable over the monitored period, with the following noted exceptions:

- Seasonal influences are apparent at the Deposit Stock Tank location (Figure 20) with higher measured flows during winter months (i.e., on the order of approximately 0.4 gpm to 0.6 gpm) and lower flows during summer months (i.e., 0.1 to 0.2 gpm range).

- The flow rate at Lowe Spring was observed to increase to approximately 0.4 gpm following the April 2015 monitoring event (Figure 20).

- Flows at locations including Twin Springs South and Tank East of Negro Rock showed variable rates over time (Figure 21).

The combined flow rates for all of the monitored locations is on the order of roughly 35 gpm to 45 gpm, accounting for temporal variability in the estimated flow rates.

9.2. Artesian Wells

Flow has been measured from three (3) artesian wells as part of the groundwater baseline monitoring program. As with springs, these wells were monitored as baseline (Prod-1) and background (Darky Rock Well and Flowing Well); refer to Table B2 in Appendix B. The flow measured from these artesian wells are summarized in Table F6 in Appendix F.

9.2.1.1. Prod-1

Prod-1 is a flowing artesian well screened in three water-bearing intervals (145 feet to 255 feet, 325 feet to 355 feet, and 380 feet to 420 feet). The lithology within the two uppermost intervals is characterized on the driller's report as sandstone with blue clay, and the lower interval is described as fractured sandstone. This well has been observed to be flowing during monitoring events (up to approximately 1.5 gpm), with the exception of events between December 2016 and September 2017 (Figure 25). During the December 2016 monitoring event the discharge pipe was believed to be frozen. Between March 2017 and September 2017, the well was pumped periodically for water supply for the resource and reserve drilling program, causing the water level in the well to drop below the artesian discharge pipe. The well was flowing again at approximately 0.34 gpm during the November 2017 monitoring event.

9.2.1.2. Background Artesian Wells

The flow measured from Darky Rock Well was normally between approximately 10.5 and 11.5 gpm, with the flow dropping to 8.3 gpm during the 2nd Quarter of 2014. Construction details for this well are not known.

The flow measured from Flowing Well ranged between approximately 3 gpm and 5.5 gpm, with higher flows observed between the 2nd Quarter of 2014 and the 2nd Quarter of 2015. Construction details for this well are not known.

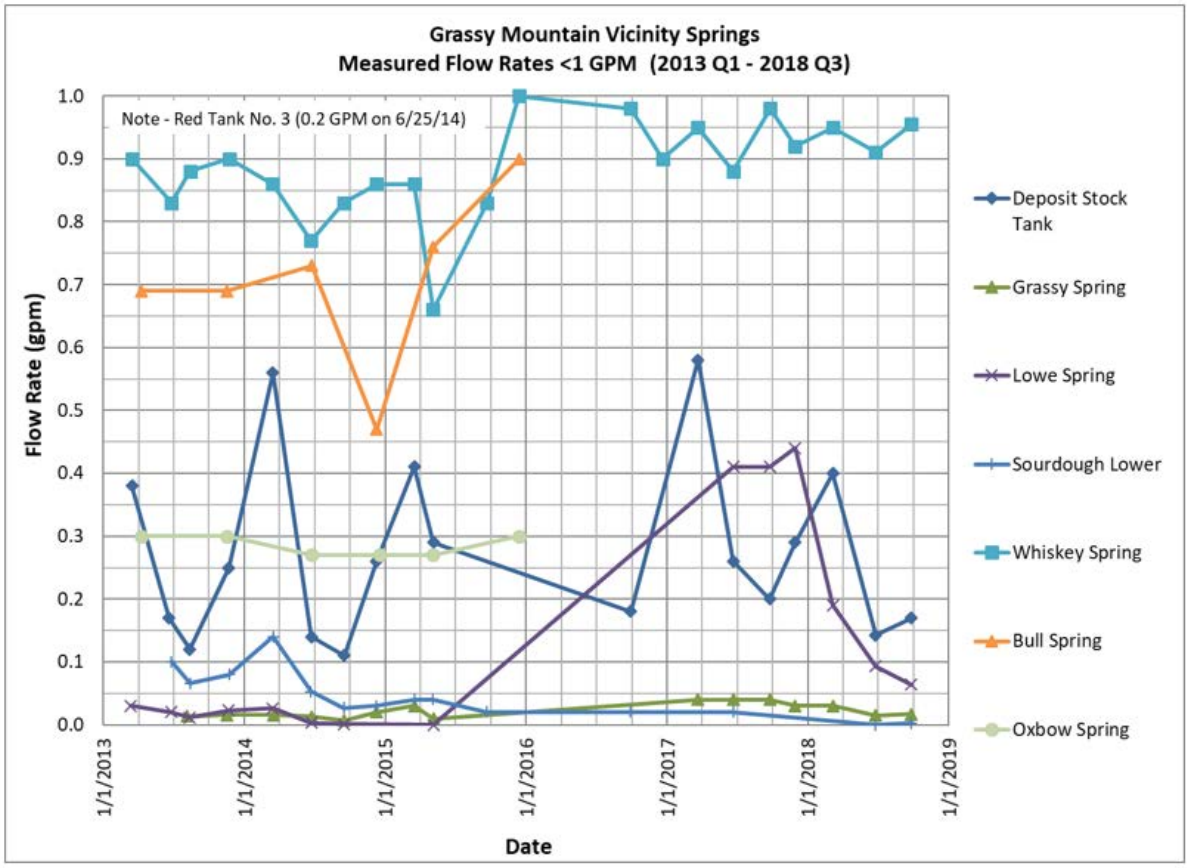

Figure 23. Grassy Mountain vicinity springs with measured flow rates less than 1 gpm (2013-2018)

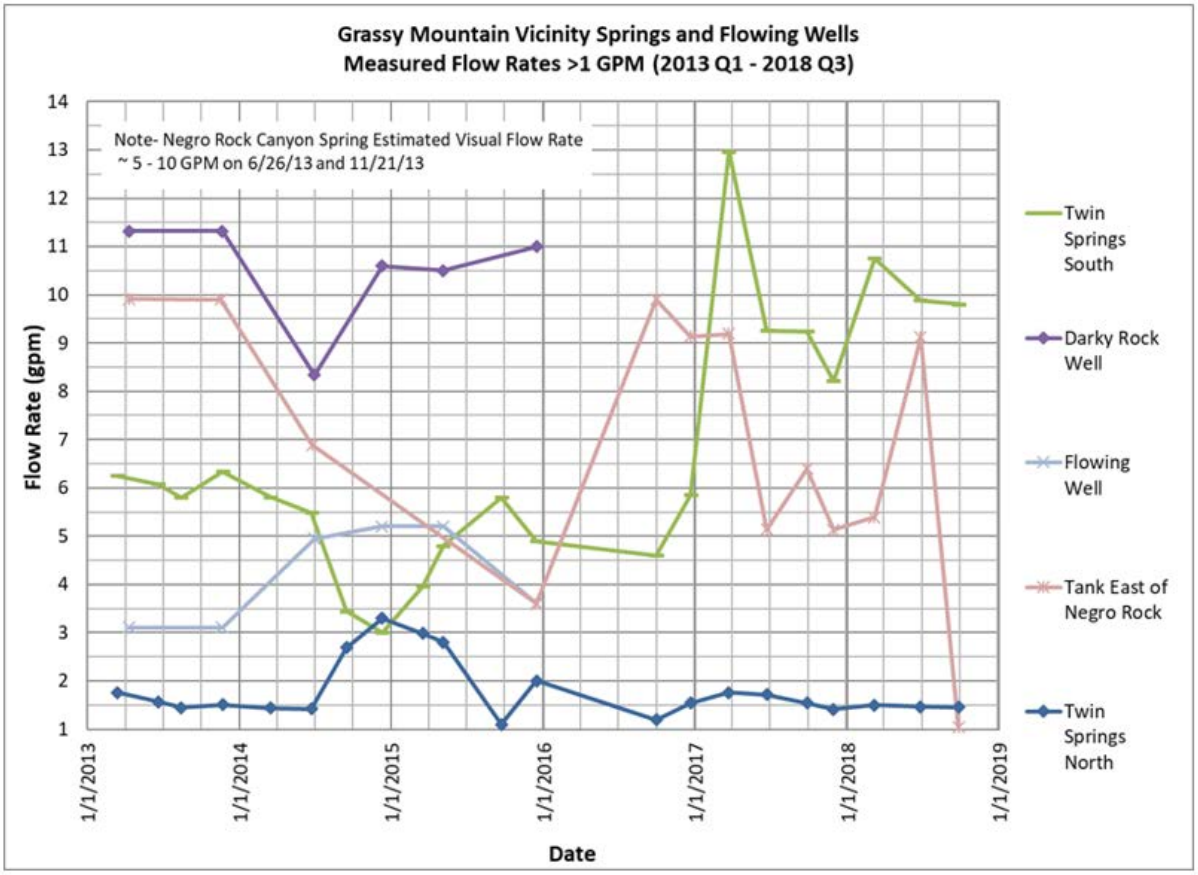

Figure 24. Grassy Mountain vicinity springs and flowing well measured flow rates greater than 1 gpm (2013 – 2018)

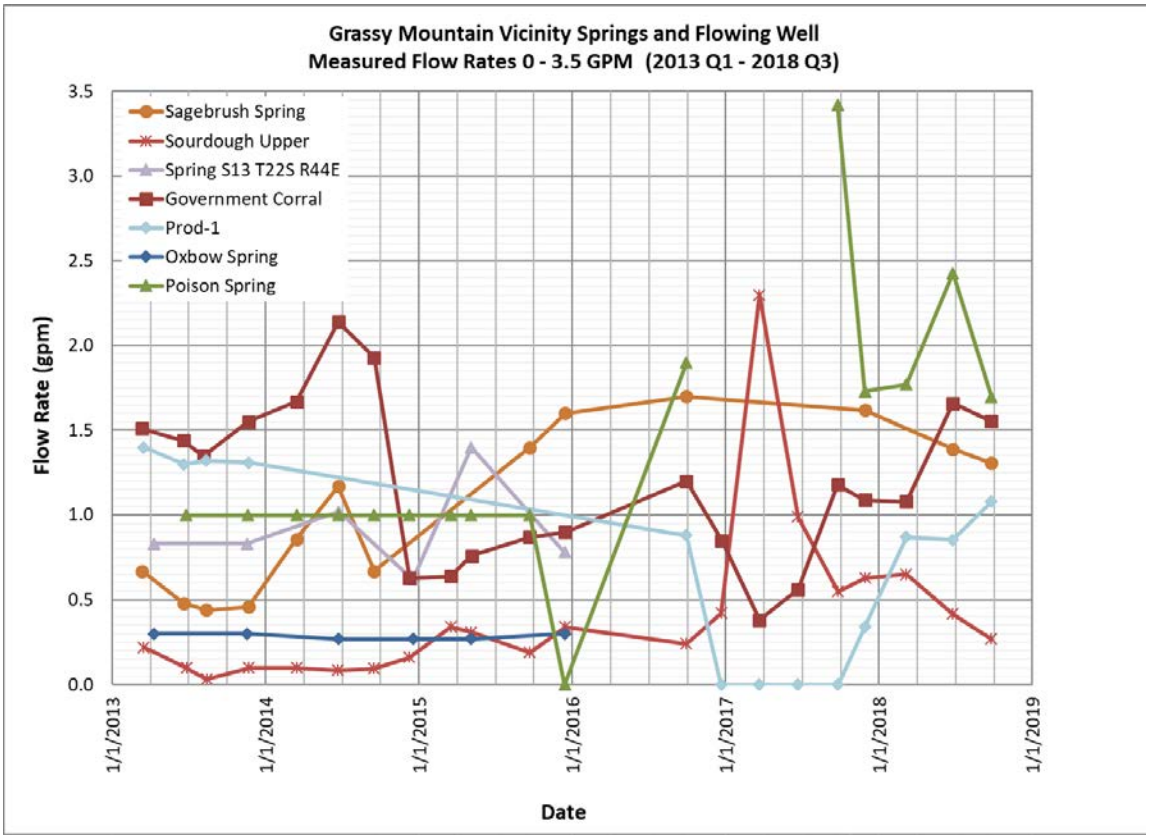

Figure 25. Grassy Mountain vicinity springs and flowing well measured flow rates, 0 - 3.5 gpm (2013 – 2018)

10. GROUNDWATER QUALITY

This section summarizes water quality results for springs (Section 10.2) and wells (Section 10.3).

10.1. Background

The objective of water quality sampling activities was to provide a baseline characterization of spring and well water quality at the Grassy Mountain Project mine site and adjacent Bishop property (EM Strategies, 2017). The Bishop property is no longer part of the Permit Area, but the data has been collected, so it is presented here. Water quality sampling was performed in accordance with the approved baseline study workplan (Section 3.4 for groundwater in EM Strategies, 2017) to fulfill baseline characterization efforts. The Work Plan addressed the regulatory framework,

methodologies, and locations, and summarized previous investigations related to water quality sampling and monitoring efforts performed during late 1980s and early 1990s.

Well and spring water quality results are compared to both primary drinking water standards and secondary drinking water standards. The primary drinking water standards are legally enforceable standards due to potential human health concerns and are expressed as maximum contaminant levels (MCLs). The MCL is the highest level of an analyte allowed in drinking water. Secondary drinking water standards are non-enforceable recommended standards established to limit cosmetic or aesthetic effects (not health-related) in drinking water, expressed as secondary maximum contaminant levels (SMCLs). Spring water quality data is also compared to ODEQ water quality standards as described in OAR 340-041.

A summary table of all the analytical results for wells and springs is provided as Table F1 in Appendix F. Laboratory analytical reports for all sampling events are provided as Appendix H. ACZ performed the analyses for all laboratory constituents sampled for the Grassy Mountain project.

Geochemical characteristics of the groundwater (wells and springs) were evaluated using Piper diagrams (also known as trilinear diagrams) and Stiff diagrams, with major ions expressed as meq/L. These diagrams are useful for evaluating the geochemical signature of the water, to illustrate general differences in water chemistry using major ions, and to group waters with similar chemical signature into identifiable groups (or hydrochemical facies).

10.2. Springs

10.2.1. Drinking Water Standards

Spring analytes that exceed primary (red and bold) and secondary (bold) drinking water standards are identified in Table F1 and summarized in Table F2 in Appendix F. The following results are apparent:

- Arsenic was the only constituent with reported concentrations above the MCL of 0.010 mg/L at sampled spring locations. Other sampled constituents were not detected above respective MCLs. Arsenic was detected above the MCL at seven of the ten sampled spring locations:
    - Deposit Stock Tank (0.025 – 0.031 mg/L),
    - Poison Spring (0.033 – 0.040 mg/L),
    - Sourdough Spring Lower (0.023 – 0.026 mg/L),
    - Sourdough Spring Upper (0.027 – 0.032 mg/L),
    - Twin Springs North (0.042 – 0.061 mg/L)
    - Twin Springs South (0.040 – 0.049 mg/L), and
    - Whiskey Spring (0.082 – 0.100 mg/L).

The highest arsenic detections were reported at Whiskey Spring (i.e., on the order of approximately 0.080 to 0.100 mg/L). Arsenic was not detected above the MCL at Government Corral Spring, Sagebrush Spring, or Lowe Spring.

- Aluminum was reported above the SMCL of 0.05 mg/L at these locations:
  - Government Corral Spring (0.06 mg/L, total) on November 22, 2013.
  - Twin Springs North (0.30 mg/L, total) on September 15, 2014, and (0.11 mg/L, dissolved phase) on March 13, 2013.

- Manganese was reported above the SMCL of 0.05 mg/L at Twin Springs North at concentrations ranging from 0.053 mg/L to 0.216 mg/L.

- Total dissolved solids (TDS) was reported above the SMCL of 500 mg/L at Lowe Spring with concentrations between 540 mg/L and 570 mg/L.

10.2.2. Water Quality Standards

Spring analytical results were compared to ODEQ water quality standards for both the Malheur River Basin and the Owyhee Basin as described in OAR 340-041[5]. Water quality in the Malheur River Basin and Owyhee Basin is managed to protect the designated beneficial uses listed in Table 201A (OAR 340-41-0201) for the Malheur River Basin and Table 250A (OAR 340-041-0250) for the Owyhee Basin. These beneficial uses include public and private domestic water supply, fish and aquatic life, and fishing.

Applicable water quality standards are listed in Table 30 (aquatic life criteria), Table 31 (aquatic life water quality guidance values), and Table 40 (human health criteria (HHC)) in OAR 340-041. For the aquatic life criteria, the standards are presented as Criterion Maximum Concentration (CMC) and Criterion Continuous Concentration (CCC) which indicate the maximum allowable average 1-hour and 96-hour average contaminant concentrations, respectively. Sampling results were compared to both the CMC and CCC values.

HHC are presented as “organism only” for areas in which fishing is the designated use and as “water + organism” for areas in which water supply and fishing are designated uses. In the Malheur River and Owyhee Basin, designated beneficial uses include water supply and fishing so the “water + organism” criteria apply.

The water quality parameters exceeding the aquatic life or HHC water quality standards at each spring sampling site are summarized in Table F4 in Appendix F.

The values shown in red in Table F4 are those that exceed the HHC. These include the following:

[5] Twin Springs North, Twin Springs South, and Whiskey Springs are located in the Owyhee Basin, all the other baseline springs are located in the Malheur River Basin.

- Arsenic was detected above the HHC level of 0.002 mg/L at eight of the ten sampled spring locations:
    - Deposit Stock Tank (between 0.025 – 0.031 mg/L).
    - Government Corral Spring (between 0.007 – 0.008 mg/L).
    - Poison Spring (between 0.033 – 0.040 mg/L).
    - Sagebrush Spring (between 0.007 – 0.008 mg/L).
    - Sourdough Spring Lower (between 0.023 – 0.026 mg/L).
    - Sourdough Spring Upper (between 0.027 – 0.032 mg/L).
    - Twin Springs North (between 0.042 – 0.061 mg/L).
    - Twin Springs South (between 0.040 – 0.049 mg/L).
    - Whiskey Spring (between 0.082 – 0.10 mg/L).

Values shown in blue in Table F4 in Appendix F are those that exceed the CCC. These include the following:

- Selenium was detected above the CCC level of 0.0042 mg/L dissolved and 0.0046 mg/L total at three of the ten sampled spring locations:
    - Deposit Stock Tank (between 0.0045 – 0.006 mg/L dissolved and 0.0048 – 0.0058 mg/L total).
    - Twin Springs North (between 0.0044 – 0.0045 mg/L dissolved).
    - Twin Springs South (between 0.0044 – 0.0049 mg/L dissolved).

Values shown in purple in Table F4 in Appendix F are those that exceed the CMC. These include the following:

- Zinc was detected above the CMC level at one of the ten sampled spring locations:
    - Sourdough Spring Upper (0.17 mg/L dissolved and 0.16 mg/L total on June 27, 2013.

10.2.3. General Geochemistry

The spring Piper diagrams for all sampling events are presented in G1 of Appendix G. The spring Stiff diagrams for all sampling events are presented in G2 of Appendix G.

Three predominant hydrogeochemical facies are apparent based on sampling events performed during 2013 and 2014 at spring locations:

- Calcium bicarbonate (Ca-HCO3) for Government Corral Spring, Sagebrush Spring, and Deposit Stock Tank.
- Sodium-potassium bicarbonate (Na/K-HCO3) for Poison Spring, Sourdough Springs (lower and upper), Twin Springs (North and South), and Lowe Spring.
- Sodium-potassium sulfate (Na/K-SO4) for Whiskey Spring.

An apparent spatial distribution is noted at certain spring locations (as Figure G5 in Appendix G). For example, springs with a dominant water type Ca-HCO3 (including Government Corral Springs, Sagebrush Springs, and Deposit Stock Tank) are located primarily on the east side of the deposit. A Na/K-HCO3 water type is more prevalent on the west side of the deposit (including Poison Springs, Sourdough Springs (Lower and Upper), and Twin Springs (Lower and Upper)). A Na/K-SO4 water type is apparent at Whiskey Spring.

10.3. Wells

10.3.1. Drinking Water Standards

Well analytes that exceed primary (red and bold) and secondary (bold) drinking water standards are identified in Table F1 and summarized in Table F3 in Appendix F. The following results are apparent:

- Arsenic was detected at above the drinking water MCL of 0.010 mg/L in all of the fifteen (15) sampled wells. The wells and the reported total arsenic values are listed below:
    - 59760 (between 0.0245 – 0.0283 mg/L).
    - 59761 (between 0.0219 – 0.0244 mg/L).
    - 59762 (between 0.163 mg/L) on December 16, 2017.
    - 59763 (between 0.0600 – 0.0787 mg/L).
    - 59766 (between 0.01847 – 0.0276 mg/L).
    - 59772 (between 0.0348 – 0.038 mg/L).
    - Bishop (0.0101 mg/L, total only) on September 15, 2014.
    - BLM (between 1.54 – 4.63 mg/L).
    - GMW17-32 (0.0799 mg/L) on December 5, 2018.
    - GMW17-33 (0.107 mg/L) on December 14, 2017.
    - GW-1 (between 0.0268 – 0.0313 mg/L).
    - GW4 (between 0.0111 – 0.0126 mg/L).
    - Prod-1 (between 0.0579 – 0.0615 mg/L).
    - PW-1 (between 0.0282 – 0.0331 mg/L).
    - PW-4 (between 0.0148 – 0.0221 mg/L).

- Antimony was detected at above the drinking water MCL of 0.006 mg/L at the following well locations:
    - 59762 (0.21 mg/L total and 0.298 mg/L dissolved) on December 12, 2017.
    - GMW17-32 (0.0374 mg/L total and 0.0371 mg/L dissolved) on December 15, 2018.
    - GMW17-33 (0.0244 mg/L total and 0.0217 mg/L dissolved) on December 14, 2017.

- Chromium (total) was detected above the MCL of 0.1 mg/L in GMW17-32 at a concentration of 0.3 mg/L during the December 2017 sampling event. Following re-development efforts (see Section 10.3.3), the chromium level in GMW17-32 dropped below the MCL based on sampling conducted on July 25, 2018. Chromium was not detected at concentrations above the MCL at other sampled locations. The presence of chromium in groundwater sampled at GMW17-32 in December 2017 is likely due to inadequate development, with water quality affected by drill cuttings or cement (SPF, 2018b). Portland cement can contain trace amounts of hexavalent chromium. Naturally occurring hexavalent chromium has been reported in groundwater within several western states (including Arizona, Nevada, and California). Chromium was also detected (below the MCL) at other sampled locations within the Grassy Mountain vicinity, including 59760, 59761, 59763, 59766, 59772, GW-4, PW-1, and PW-4 at concentrations ranging from 0.0005 mg/L to 0.0017 mg/L, suggesting the presence of a naturally occurring source for chromium at low concentrations.

- Lead was detected above the MCL of 0.015 mg/L at the following well locations:

    - 59766 at a concentration of 0.019 mg/L (total only) on March 14, 2013.
    - GMW17-32 at a concentration of 0.0204 mg/L (total only) on December 11, 2017.
    - On both of these sample events, the dissolved lead concentrations were less than the method detection limit. Following re-development, the GMW17-32 lead concentration was less than the MCL as measured on July 25, 2018.

- Aluminum was detected above the SMCL of 0.05 mg/L in the following well locations:

    - 59760 (between 0.12 – 0.74 mg/L total).
    - 59762 at a concentration of 3.37 mg/L total on December 6, 2017.
    - 59763 (between 0.09 – 2.07 mg/L total).
    - 59766 (between 1.84 – 25.6 mg/L total).
    - GMW17-32 at a concentration of 0.07 mg/L on December 5, 2018.
    - GW-4 (between 0.6 – 1.68 mg/L total and 0.06 – 0.07 mg/l dissolved).
    - PW-1 (between 0.06 – 0.23 mg/L total and 0.08 mg/l dissolved).
    - PW-4 (between 3.94 – 8.11 mg/L total and 0.07 – 0.11 mg/L dissolved).

    Total concentrations of aluminum are typically much higher than dissolved concentrations which suggests that sediment in the samples is the source of the most of the detected aluminum.

- Iron was detected above the SMCL of 0.3 mg/L in the following well locations:

    - 59760 at a concentration of 0.37 mg/L total on September 11, 2014.
    - 59762 at a concentration of 4.54 mg/L total on December 6, 2017.
    - 59763 at a concentration of 1.45 mg/L total on March 18, 2013.
    - 59766 (between 2.77 – 23.0 mg/L total and 0.71 – 1.06 mg/L dissolved).
    - BLM (between 47.4 – 201 mg/L total and 54.6 – 200 mg/L dissolved).
    - GMW17-32 at a concentration of 0.52 mg/L total on December 5, 2018.
    - GW-4 (between 0.33 – 0.59 mg/L total).
    - PW-1 (between 0.32 – 1.04 mg/L total).
    - PW-4. (between 3.98 – 23.5 mg/L total).

    Similar to aluminum, most of these wells show high total iron concentrations but low dissolved iron concentrations, suggesting that the source of iron in the samples is sediment. Exceptions are Well 59766 and the BLM well, both with high dissolved iron concentrations. The presence of iron in groundwater is consistent with the lithology in the area, specifically the silicified, iron-stained knob that comprises Grassy Mountain.

- Manganese was detected above the SMCL of 0.05 mg/L in the following well locations:

    - 59762 at a concentration of 0.589 mg/L total and 0.535 dissolved.
    - 59763 (between 0.0992 - 0.023 mg/L total and 0.0838 – 0.1974 mg/L dissolved).
    - 59766 (between 0.452 – 0.73 mg/L total and 0.263 – 0.475 mg/L dissolved).
    - BLM (between 0.43 – 1.65 mg/L total and 0.532 – 1.67 mg/L dissolved).
    - Prod 1 at a concentration of 0.0513 mg/L dissolved on March 16, 2014.
    - PW-4 (between 0.0509 – 0.1679 mg/L total).

- TDS was reported above the SMCL of 500 mg/L at the following well locations:

    - 59762 at a concentration of 648 mg/L.
    - 59763 (between 1,090 and 1,220 mg/L).
    - 59766 (between 640 and 674 mg/L).
    - BLM (between 1,080 and 1,850 mg/L).
    - GMW17-32 at a concentration of 920 mg/L.
    - PW-4 (between 510 and 590 mg/L).

- Sulfate was reported above the SMCL of 250 mg/L in the five following wells:

- 59762 at a concentration of 333 mg/L.
- 59763 (between 377 and 626 mg/L).
- 59766 (between 300 and 320 mg/L).
- BLM (between 541 and 1220 mg/L).
- GMW17-32 at a concentration of 532 mg/L.

10.3.2. General Geochemistry

The well Piper diagrams for all sampling events are presented in G3 of Appendix G. The well Stiff diagrams for all sampling events are presented in G4 of Appendix G. The same predominant hydrogeochemical facies noted for springs are also apparent in wells within the Grassy Mountain project vicinity:

- Calcium bicarbonate (Ca-HCO3) for 59760, 59761, 59722, and GW-1.
- Sodium-potassium bicarbonate (Na/K-HCO3) for Bishop, GW-4, Prod-1, and PW-1.
- Sodium-potassium sulfate (Na/K-SO4) for 59763, 59766, BLM, 59762, and GMW17-32.

Water quality trends for wells PW-4 and GMW17-33 could be characterized as Na/K-HCO3 or Na/K-SO4 water types based on anion trends. A fourth water quality type (calcium-sulfate) was previously described for wells GW-3 and GW-5 based on historical sampling events (JMM, 1991). A calcium-sulfate water type has not been observed elsewhere based on subsequent sampling events.

The predominant water types appear to have a spatial distribution, Figure G5, attributed to local geologic conditions and areas of recharge/discharge. Predominantly Ca-HCO3 and Na/K-HCO3 water types are noted in areas hydraulically upgradient of the deposit and downgradient within the basin. Groundwater sampled from wells located hydraulically downgradient of the deposit appear to exhibit Na/K-SO4 and Ca-SO4 water types. The presence of calcium may be attributed to areas with basalt deposits, and sodium may be associated with volcanic tuff and sedimentary deposits (SPF, 2016a). Sulfate may be associated with areas downgradient of the ore body and potentially attributed to longer residence times due to lower hydraulic conductivity and/or oxidation and leaching of the ore deposit (ABC, 1992).

Deeper wells (59762 and GWM17-32) suggest a predominant Na/K-SO4 water type that is also apparent at shallow well locations (i.e., BLM, 59763, and 59766) hydraulically downgradient of the deposit.

10.3.3. Re-Development of GMW17-32

The pH measured from GMW17-32 following test pumping was unusually high, reported at 11.3 by the laboratory (SPF 2018b). A pH of between 8 and 9 is expected based on the nearby deep well 59762 and Poison Spring. The conductivity values were also

higher than expected when compared to well 59762. The high pH and conductivity values were attributed to inadequate development, with these water quality parameters likely affected by drill cuttings or cement (SPF2018b). Development of this well is challenging due to low yield.

The well was first re-developed by pumping in July 2018, when a total of six casing volumes were removed from the well. The pH reported by the laboratory was 10.3, a standard unit lower than the pH prior to re-development. The specific conductance following re-development was also considerably lower, 1209 µS/cm at 25°C versus 2095 µS/cm at 25°C. The lower pH and conductivity values, along with improved water clarity, suggests that the re-development has had a positive effect on water quality. Based on these results, and after discussion with OWRD and DOGAMI, additional development was performed on the well in November and December 2018 by pumping the well.

Between November 9 and December 4, 2018, the well was pumped on 17 different occasions. During each pumping event the well was pumped at approximately 1.5 to 2.5 gpm, until the water level in the well reached the pump suction. During each event, pumping rate, pH, and water appearance were recorded every 10 to 15 minutes.

A total of approximately 2,200 gallons were pumped from the well during the 17 pumping events, equal to approximately 24 casing volumes. Between November 9 and December 4, the pH declined from over 10 to approximately 8.5. The additional re-development efforts were successful in reducing the pH of the groundwater produced from the well to a level considered to be representative of the aquifer. The well was sampled again for the complete suite of analytes on December 5, 2018. At the time of sampling the pH of the water was measured in the field at 8.39. The water quality results from all three sampling events are presented in Table 5.

Analytes in mg/L unless noted. MCL column has secondary MCL values indicated by an *. If result is <#, it is less than the MDL. If the result is blank, it was not tested. **Bold** results are over secondary MCL. **Red bold** results are over primary MCL.		**GMW17-32 Water Quality Results**

Table 5. GMW17-32 Water Quality Results

10.4. **Quality Assurance/Quality Control (QA/QC)**

10.4.1. Background

This section summarizes QA/QC results for the 2013, 2014, 2017, and 2018 sampling events. Duplicate samples, equipment blanks, transfer blanks, and mercury transfer

blanks were collected during each quarterly event and submitted to ACZ Laboratories under chain-of-custody procedures in an effort to assess the validity of water quality results. These QA/QC samples were collected at a 10% sampling frequency, or one set per sampling event.

For sites where duplicate samples were collected, the original and duplicate samples were compared using difference and relative percent difference. For analytical results less than the minimum detection limit, an estimated value was generated by dividing the minimum detection limit by the square root of 2 (~1.41). Results are considered to be significantly different if two conditions apply: (1) at least one of the original or duplicate results are greater than five times the minimum detection limit (MDL) and (2) the percent difference between results is equal to or greater than 20%.

For equipment blanks and transfer blanks, the arithmetic difference and percent difference were calculated between the blank and ideal conditions for deionized water (all parameters below detection), using the same approach as for duplicate samples.

Laboratory analytical reports for all sampling events are provided as Appendix H. The QA/QC results are presented in Appendix I.

10.4.2. 2013 Field QA/QC

10.4.2.1. Sample QA/QC

The significant QC/QC results from 2013 are summarized below:

- The transfer blank from the 1st Quarter 2013 showed a significant difference for total tin.
- The Twin Springs South spring duplicate sample from the 1st Quarter 2013 showed a significant difference for total manganese.
- The well 59772 duplicate sample from the 1st Quarter 2013 showed a significant difference for dissolved cobalt.
- The well GW-4 duplicate sample from the 4th Quarter 2013 showed a significant difference for total aluminum and total iron.

10.4.2.2. Well Pump QA/QC

An equipment and transfer blank were collected from one of the permanent pump setups prior to installation. The well pump equipment blank, when compared to ideal conditions for deionized water, showed significant differences for dissolved cobalt and total manganese.

10.4.3. 2014 Field QA/QC

10.4.3.1. Sample QA/QC

Duplicate samples with significantly different results for wells and springs from 2014 sampling are summarized below in Table 6 and Table 7, respectively.

Well Duplicate Sample Location	Quarterly Event	Significantly Different Parameters
59760	Q1-2014	Aluminum, total
		Arsenic, dissolved
		Copper, dissolved
		Copper, total
		Iron, total
		Lead, total
		Manganese, total
		Vanadium, dissolved
PW-4	Q2-2014	Aluminum, total
		Beryllium, total
		Cobalt, dissolved
		Cobalt, total
		Iron, total
		Lead, total
		Magnesium, total
		Mercury, total
		Residue, Non-Filterable (TSS) @ 105C
		Titanium, total
		Uranium, total
59763	Q3-2014	Cobalt, dissolved
		Iron, dissolved
		Selenium, total
		Sulfate

Table 6. Well Duplicate Sample Results

Spring Duplicate Sample Location	Quarterly Event	Significantly Different Parameters
Deposit Stock Tank	Q1-2014	Barium, dissolved
		Boron, dissolved
		Calcium, dissolved
		Cobalt, dissolved
		Hardness as CaCO3
		Magnesium, dissolved
		Potassium, dissolved
		Sodium, dissolved
		Strontium, dissolved
Twin Springs South	Q2-2014	Cobalt, dissolved
		Manganese, total
Government Corral Spring	Q3-2014	Cobalt, dissolved

Table 7. Spring Duplicate Sample Results

None of the quarterly equipment blanks showed any significant differences between any of the sampled parameters. This result indicates that the sampling equipment was not influencing the sampling results. None of the quarterly transfer blanks showed any significant differences between any of the sampled parameters. This result indicates that the sampling procedure was not influencing the sampling results.

At least three mercury transfer blanks were collected in the field during each quarterly sampling event and submitted to the laboratory for mercury analysis. All of the quarterly mercury transfer blanks were below the MDL for mercury (0.2 ng/L). This result indicates that the sampling procedure or environment were not influencing the mercury results.

10.4.4. Laboratory QA/QC

ACZ laboratories prepared Level 2 analytical reports for each sampling event[6], including internal QA/QC procedures and results. QA/QC measures involved performing statistical analyses of the results for each sample batch and included trip, spike, and duplicate blanks for meeting the laboratory's specified RPD of 20% (SPF, 2015a). Level 2 analytical reports for all sampling events are included in Appendix H.

[6] All quarterly sampling events and 2017-2018 sampling.

11. CONCLUSIONS

The following can be concluded from the baseline water resources monitoring activities within the proposed Grassy Mountain Mine study area:

- Seven quarterly sampling events occurred from 2013 to 2014 in ten springs (when ample flow available) and twelve wells on a schedule in accordance with the Work Plan.

- After the development of 59762 and construction and development of GMW17-32 and GMW17-33, these wells were sampled during test pumping. Two additional development and sampling events occurred in GMW17-32 to obtain more representative results.

- Quarterly manual static water level or flow measurements were obtained from twenty-four (24) monitoring wells and eleven (11) background springs. The quarterly measurements were maintained from 2013 through 2018 for 19 wells and from the 3rd Quarter 2014 through 2018 for another five (5) wells. Due to ownership changes, no monitoring occurred during the first and second quarters of 2016

- Groundwater elevation trends appear relatively stable over time in wells throughout the project area, based on a monitoring period that spans several years. Some wells show influence of seasonal recharge, particularly during periods of above average precipitation. Other wells show fluctuations attributed to groundwater pumping or to drilling activities.

- Groundwater flow generally occurs from the southeast to the northwest in the vicinity of the Project, from higher elevations along the base of Grassy Mountain (~4,000 feet asl) to lower elevations along Negro Rock Canyon (~3,200 feet asl).

- Potentiometric surface maps based on shallow wells support a consistent flow direction without seasonally influenced variations. Groundwater flow appears to follow surface topography, generally to the northwest. The pattern of groundwater flow shows local variations attributed to the presence of faults, fractures, lithologic facies changes, vertical gradients, or some combination of these influences.

- Arsenic is present in groundwater within the Grassy Mountain vicinity. Concentrations exceeded the drinking water MCL at all of the 15 sampled well locations and at 8 of the 10 sampled spring locations.

- Other exceedances of the drinking water MCL included antimony (two samples), chromium (GMW17-32 prior to additional development), and lead (three samples, including one from GMW17-32 prior to additional development).

- Numerous samples from wells and springs exceeded the drinking water SMCLs for aluminum, iron, manganese, TDS, and sulfate. Most, but not all, exceedances for aluminum and iron appear to be associated with sediment in groundwater samples.

- Groundwater within the Grassy Mountain vicinity exhibits different water quality types (Ca-HCO3, Na/K-HCO3, or Na/K-SO4) based on spatial distribution, attributed to subsurface lithology/facies characteristics.

11.1. **Recommendations**

Paramount, Calico and SPF recommend that the baseline data collection, compilation and results described in this report be considered complete based on the Work Plan approved for the Grassy Mountain Project Area with respect to groundwater characterization.

Re: Calico Grassy Mountain Baseline Data Collection
(Sent via email and USPS, return receipt requested)

Dear Mr. Thornsberry:

The *Draft Environmental Baseline Study Work Plans* were received from Calico Resources USA Corporation (Calico) on September 20, 2012. Public notice was provided as required by Oregon Administrative Rules (OAR) 632-037-0040. Public hearings were scheduled and held in Bend, Oregon on October 9, 2012 (remote access provided in Portland and Pendleton) and in Ontario, Oregon on October 16, 2012 (remote access provided in Portland and Pendleton). Written comments were accepted by the Oregon Department of Geology and Mineral Industries (DOGAMI) until November 6, 2012.

The Technical Review Team (TRT) met on 7/16/2012, 10/4/2012, 10/31/2012, 12/13/2012, 2/11/2013, 2/25/2013, and 3/8/2013 to review and provide comments on the draft environmental baseline study work plans. Additional information was provided by Calico in response to TRT comments. The *Final, Revised Environmental Baseline Study Work Plans* were approved by the TRT in March, 2013. Additional TRT meetings were held 6/11/2013, 11/19/2014, 3/30/2015, 9/28/2015, and 1/4/2016.

Calico proceeded to collect baseline data and file that information with the State. DOGAMI coordinated the consolidated responses of the appropriate state agencies in each discipline of the work plans.

Second Amended Notice of Intent
On August 3, 2015, Calico filed supplemental environmental baseline data as a result of filing its *Second Amended Notice of Intent*. The *Second Amended Notice of Intent* changed the ore processing, tailing management, and administration building locations to federal land managed by the Bureau of Land Management (BLM) and eliminated an associated haul road. The original *Notice of Intent* was filed February 8, 2012 and an amended *Notice* was filed June 11, 2012. The *Second Amended Notice of Intent* was filed July 17, 2015 and proposed to locate the ore processing facility, administrative building, and tailings management area on BLM land immediately adjacent to the proposed mine site. The original and first amended *Notice of Intent* had proposed a location on private property west of the proposed mine, as well as a connecting haul road. These areas are no longer part of the proposal.

Public notice was provided as required by Oregon Administrative Rules (OAR) 632-037-0040. Public hearings were scheduled and held in Bend, Oregon on August 26, 2015 and Ontario, Oregon on September 1, 2015. Written comments were accepted until September 15, 2015.

As part of the *Second Amended Notice of Intent*, Calico filed additional, supplemental and revised baseline data showing a new location and layout for the proposed processing and administration facilities, and removing the haul road. By this letter, the TRT accepts the supplemental and revised baseline data, with the additional modifications to the water resources work plans discussed below.

Baseline Data Review

DOGAMI routinely received baseline data information from Calico. The baseline data was assigned to the appropriate state agencies for review and additional coordination, as necessary. For some baseline data information, additional information was requested. When the baseline data collection was deemed complete and conformed to the State approved *Final, Revised Environmental Study Work Plans*, adopted by the TRT in March, 2013, DOGAMI responded to Calico with an acceptance letter.

Baseline Data Topics

The information below summarizes the data collected and submitted by Calico and the State review and response by study topic area.

Geology & Soils

The initial baseline data for Geology and Soils was received from Calico on November 12, 2014 and assigned to DOGAMI, Oregon Department of Agriculture, Water Resources Department (WRD), and Oregon Department of Environmental Quality (DEQ) for review. The State responded on January 27, 2015. A revised baseline report was submitted on February 24, 2015 by Calico. The State received a revised Eronite Sampling and Analysis Plan on February 25, 2015.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, removing the haul road and adding improvements to the mine site access road. Additional Geology & Soils information was submitted. This was reviewed by the appropriate state agencies. DOGAMI responded to Calico on December 18, 2015 that the Geology & Soils information conformed to the adopted baseline data methodologies.

Geochemistry

The initial baseline data was received from Calico on August 7, 2015, and an additional workplan was submitted on August 9, 2015. Based on review by DOGAMI's geochemistry contractor, a revised report was received from Calico on November 6, 2015, which was reviewed by DOGAMI's geochemistry contractor.

The Technical Review Team Geochemistry Subcommittee met on 2/5/2013, 11/20/2015, and 12/18/2015 to discuss and review the geochemistry baseline submittal. A revised report was received by the State on December 29, 2015, and an amended revised report was received on December 30, 2015.

The State Agencies participating in the Geochemistry Subcommittee include DOGAMI, Water Resources Department (WRD), and Oregon Department of Environmental Quality (DEQ); the Bureau of Land Management also participates.

The TRT subcommittee unanimously approved the geochemistry baseline methodology work plan on January 4, 2016.

Surface Water & Groundwater

Surface and groundwater sampling was conducted starting in the first quarter of 2013. One full year of groundwater and surface water sampling was completed with chemical analysis.

Additional groundwater level sampling has continued. Several adjustments to the approved baseline sampling methodology were made for surface and groundwater sampling, including:

- Revised sampling preservation practices to ensure temperature sensitive samples arrive to the laboratory at recommended temperatures (3/25/14).
- Revised nitrite/nitrate sampling methods; remove inorganic arsenic/retain total arsenic, revise avian use field collection form (8/8/13).
- Add uranium to water quality parameters to be sampled (groundwater and surface water) (5/30/13).

Water resources sampling events and the State responses are summarized in the table below:

Surface and Groundwater			
	Date Received	*State Response*	*Notes*
...1Q13	6/21/13	TRT discussion at 7/18/13 mtg	
...2Q13	9/4/13	DOGAMI letter 10/24/13	
...3Q13	12/16/13	DOGAMI letter to Calico 2/14/14	
...4Q13	1/30/14	DOGAMI letter to Calico 12/10/14	
2013 Annual Report	1/19/15	DOGAMI letter to Calico 12/10/14 DOGAMI letter to Calico 5/19/15	

	Date Received	*State Response*	*Notes*
...1Q14	6/4/14	DOGAMI letter to Calico 12/10/14	
...2Q14	9/5/14	DOGAMI letter to Calico 12/10/14	
...3Q14	12/5/14	DOGAMI letter to Calico 1/27/15	
...4Q14	1/19/15	DOGAMI letter to Calico 5/19/15	
...1Q15	4/9/15	DOGAMI letter to Calico 5/19/15	Water level data only
...2Q15	7/02/15	DOGAMI letter to Calico 9/16/15	Water level data only
...3Q15	11/4/15	DOGAMI letter to Calico 12/17/15	Water level data only
...GW Characterization Report	11/6/15	WRD discussion; 12/10/15 Water Resources Subcommittee	

The members of the TRT Water Resources Subcommittee include DOGAMI, Water Resources Department, DEQ, and Department of State Lands. The Bureau of Land Management also participates. The TRT Water Resources Subcommittee met to review water resources related information on 10/22/2012, 1/22/2013, 7/18/2013, 10/3/2013, 10/31/2013, 11/22/2013, 1/22/2014, 7/30/2014, 11/7/2014, 1/20/2015, 3/30/2015, and 12/10/2015.

Calico filed a request to modify the water resources baseline data with DOGAMI on December 19, 2015. The Water Resources Subcommittee has reviewed the request and recommends that the delay of the deep well(s) installation and the delay of the conceptual groundwater model are reasonable. The delay on the installation of the ore body well installation is expected circa the 3rd or 4th quarter of 2016. Calico was advised of these modifcations in a letter to the Calico dated January 12, 2016.

Terrestrial Vegetation

The initial baseline data for Terrestrial Vegetation was received from Calico on May 20, 2014. The reviewing State agencies included DOGAMI and the Oregon Department of Agriculture. The State responded on June 24, 2014.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities and removing the haul road between the mine site and the former proposed processing and tailings sites. Additional Terrestrial Vegetation information was submitted. This was reviewed by the Department of

Agriculture. DOGAMI responded to Calico on October 23, 2015 that the Terrestrial Vegetation information conformed to the adopted baseline data methodologies.

Wetlands and Waters of the State
The initial wetlands delineation was submitted by Calico to the Department of State Lands on December 18, 2012. The delineation was approved by the Department of State Lands on July 15, 2014.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, removing the haul road, and adding improvements to the mine access road. A revised wetlands delineation report was submitted by Calico to the Department of State Lands on August 21, 2015. An amended wetlands delineation report was filed by Calico with the Department of State Lands on September 23, 2015. The Department of State Lands approved the wetland delineation report on November 9, 2015.

Wildlife Resources
The initial baseline data for Wildlife Resources was received from Calico on September 4, 2014. The information was reviewed by the Oregon Department of Fish and Wildlife (ODFW). ODFW requested additional information and revisions to the baseline report. A revised report was received from Calico on October 14, 2014 and was reviewed by ODFW and accepted on October 21, 2014.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, and removing the haul road. ODFW staff reviewed the *Second Amended Notice of Intent* and its impact on wildlife resources. ODFW requested additional information on August 24, 2015. After reviewing that additional information, ODFW concluded that the existing wildlife resources baseline information was sufficient for the amended NOI boundaries.

Aquatic Resources
The initial baseline data for Aquatic Resources was received from Calico on June 13, 2014. The information was reviewed by the Oregon Department of Fish and Wildlife (ODFW), Department of State Lands, and Oregon DEQ. The State requested additional information in June, 2014. Calico filed an amended aquatic resource baseline report on November 18, 2014. DOGAMI, on behalf of the participating State Agencies, requested additional information. A revised report based on the Second Amended Notice of Intent was received from Calico on February 17, 2015, and was accepted by the State on March 19, 2015.

Grazing Management
The initial baseline data for Grazing Management was received from Calico on June 10, 2015. The baseline data encompassed the area included in the

Second Amended Notice of Intent. The information was reviewed by the Oregon Department of Agriculture. The State accepted the baseline information for Grazing Management on June 30, 2015.

Visual Resources

The initial baseline data for Visual Resources was received from Calico on November 11, 2014. There are no Oregon requirements for visual resources baseline assessment in the Oregon regulations or statues. The State responded to Calico on January 6, 2015.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, and removing the haul road. Calico filed an amended visual resources baseline report on August 3, 2015. The State accepted Calico's letter on September 19, 2015.

Air Quality

Calico collected air quality baseline information according to the approved work plan. The State approved a revision to the work plan that removed 'elemental analysis' of particulate samples (4/17/15)

Calico collected quarterly ambient and meteorological baseline air quality data, and the State response is summarized in the table below:

Air Quality Baseline Data

Quarterly Reporting	*Date Received*	*State Response*
...3Q14	11/21/14	DOGAMI letter to Calico 1/27/15
...4Q14	2/13/15	DOGAMI letter to Calico 3/19/15
...1Q15	7/22/15	DOGAMI letter to Calico 9/10/15
...2Q15	8/6/15	DOGAMI letter to Calico 9/22/15
...3Q15	10/29/15	DOGAMI letter to Calico 11/19/15

The final air quality annual report was received by the State of Oregon on November 10, 2015. The air quality baseline data was reviewed by the Oregon Department of Environmental Quality (DEQ), and determined by DEQ staff to conform to both the Final Revised Environmental Baseline Data Study Work Plans (approved by the State on March 8, 2013) and the Quality Assurance Project Plan approved by DEQ in September 2014. The State responded to Calico accepting the baseline air quality data on December 30, 2015.

Noise

The initial baseline data for Noise was received from Calico on October 14, 2014. An independent contractor was used by the State to review the report. DOGAMI provided comments to Calico and requested revisions in the baseline

noise report. Calico submitted a revised noise baseline report on January 20, 2015 and DOGAMI accepted the baseline report in a letter January 27, 2015.

Cultural Resources
The initial baseline data for cultural resources was received from Calico on February 16, 2015. The State Historic Preservation Office (SHPO) reviewed the information. Revisions to the baseline report were requested in a letter dated March 19, 2015 to Calico.

Calico provided additional baseline data information on cultural resources on December 7, 2015.

On January 4, 2014 the State Historic Preservation Office (SHPO) stated that it had received the preliminary report and provided comments regarding the adequacy of the report. SHPO also noted that since the project area has changed and is now on BLM property, SHPO will need to hear from BLM under section 106, which is a federal requirement. On January 14, 2016 SHPO noted that the State requirements for baseline data collection have been met.

Land Use
The initial baseline data for land use was received from Calico on July 6, 2015. The information was reviewed by the Oregon Department of Agriculture, Department of Land Conservation & Development, and Malheur County.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, and removing the haul road. Additional supplemental information was provided on land use. The supplemental information was reviewed by the Oregon Department of Agriculture, Department of Land Conservation & Development, and Malheur County.

The State accepted the supplemental land use baseline information on October 23, 2015.

Transportation
The initial baseline data for Transportation was received from Calico on July 6, 2015. The information was reviewed by Malheur County.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, and removing the haul road. Additional supplemental information was provided on transportation. The supplemental information was reviewed by Malheur County.

The State accepted the supplemental transportation baseline information on October 14, 2015.

Socio-Economic
The initial baseline data for socio-economics was received from Calico on July 6, 2015. The information was reviewed by the Eastern Regional Solutions Team. The State accepted the baseline information for socio – economic factors on October 14, 2015.

Environmental Justice
The initial baseline data for Environmental Justice was received from Calico on June 23, 2015. The information was reviewed by the Oregon Department of Environmental Quality. The State accepted the baseline information for Environmental Justice on October 14, 2015.

Recreation
The initial baseline data for Recreation was received from Calico on July 6, 2015. There are no Oregon requirements for Recreation resources baseline assessment in the Oregon regulations or statues. The State responded to Calico on August 3, 2015.

As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, and removing the haul road. Calico filed an amended the Recreation resources baseline report on August 3, 2015. The State responded to Calico on October 19, 2015.

Wild & Scenic or Recreational Rivers
Area of Critical Environmental Concerns
Research Natural Areas
Outstanding Natural Areas
The information in the baseline data methodologies report documenting no Wild & Scenic areas, areas of critical environmental concern or outstanding natural areas adequate for baseline. The State approved the baseline data and concluded no additional information was needed

Oregon Natural Heritage Plan
The State requested that Calico include a review of the Oregon Natural Heritage Plan as part of the baseline data gathering in a January 26, 2015 letter. As part of the *Second Amended Notice of Intent*, Calico filed additional, revised baseline data showing a new location and layout for the proposed processing and administration facilities, and removing the haul road. Calico filed additional information regarding areas included in the Oregon Natural Heritage Plan in the supplemental information filed August 3, 2015. The State accepted the information on January 12, 2016.

Completion of Baseline Data Collection
On January 14, 2016 the Technical Review Team determined that collection of baseline data under the approved methodologies is complete. Subject to any additional data verification required under ORS 517.969, the baseline data may be used by Calico to support the consolidated application as provided in ORS 517.971 and the environmental evaluation as provided under ORS 517.979.

We appreciate the work by Calico and its consulting team to work with the Technical Review Team to gather and evaluate the baseline environmental data at the Grassy Mountain site.

Please let me know if you have any questions.

Sincerely,

Richard Riggs
Assistant Director
Oregon Dept. of Geology and Mineral Industries
Manager, Mineral Land Regulation & Reclamation Program

MALH 2974 RECEIVED JAN 18 1994 WATER RESOURCES DEPT. SALEM, OREGON

22S/44E/8dd

STATE OF OREGON
MONITORING WELL REPORT

(as required by ORS 537.765 & OAR 690-240-095)

Start Card # 59760

(1) OWNER/PROJECT:

WELL NO. TW-1

Name Newmont Gold

Address 318 A. Street

City West Vale State OR Zip 97018

(2) TYPE OF WORK:

[X] New Construction [ ] Repair [ ] Recondition
[ ] Conversion [ ] Deepening [ ] Abandonment

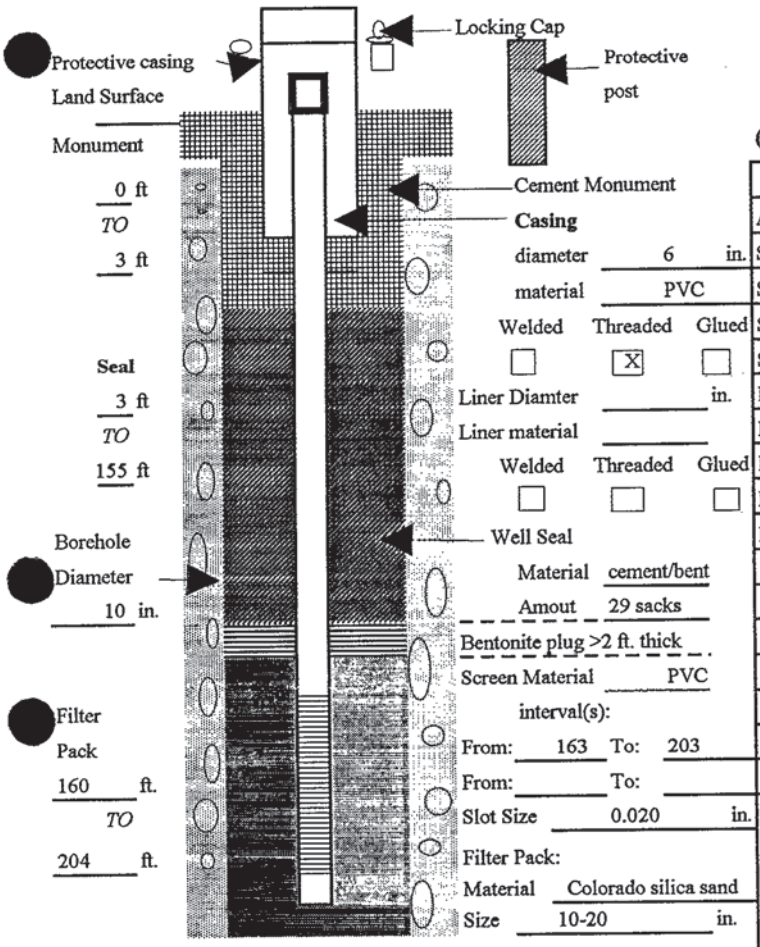
(3) DRILLING METHOD

[X] Rotary Air [ ] Rotary Mud [ ] Cable
[ ] Hollow Stem Aug. [ ] Other

(4) BORE HOLE CONSTRUCTION

Special Standards Yes [ ] No [X] Depth completed well 203 ft.

59760 / MALH 2974, 2991



Casing
diameter 6 in.
material PVC
Welded [ ] Threaded [X] Glued [ ]

Liner Diamter in.
Liner material
Welded [ ] Threaded [ ] Glued [ ]

Well Seal
Material cement/bent
Amout 29 sacks
Bentonite plug >2 ft. thick

Screen Material PVC
interval(s):
From: 163 To: 203
From: To:
Slot Size 0.020 in.

Filter Pack:
Material Colorado silica sand
Size 10-20 in.

(5) WELL TEST:

[ ] Pump [ ] Bailer [X] Air [ ] Flowing Artesian
Permeability Yield 45 GPM
Conductivity pH
Temperature of water 56 F/C Depth artesian flow found ft.
Was water analysis done? [ ] Yes [X] No
By whom?
Depth of strata to be analyzed. From To ft.
Remarks:
Name of supervising Geologist/Engineer M. Pappalardo

(6) LOCATION OF WELL By legal description

Well Location: County MALHEUR
Township 22S (N/S) Range 44E (W/E) Section 8
1. NW 1/4 of SE 1/4 of above section.
2. Street address of well location GRASSY MOUNTAIN, VALE, OR

Ground Elevation

Material	From	To	SWL
General geology of the area consists of a series of intercalated sedimentary and volcanic formations of late Tertiary age. This well was originally drilled as an exploratory hole in 1988 or 1989. The hole was drilled to a total depth of 915 feet. OWRD staff sounded the well to a depth of 93 feet in 2012. The well could be blocked, or it may have collapsed. Construction at land surface consists of a 2" gray plastic casing inside of an 8.5" steel casing.			

Date started Completed 12/31/1989

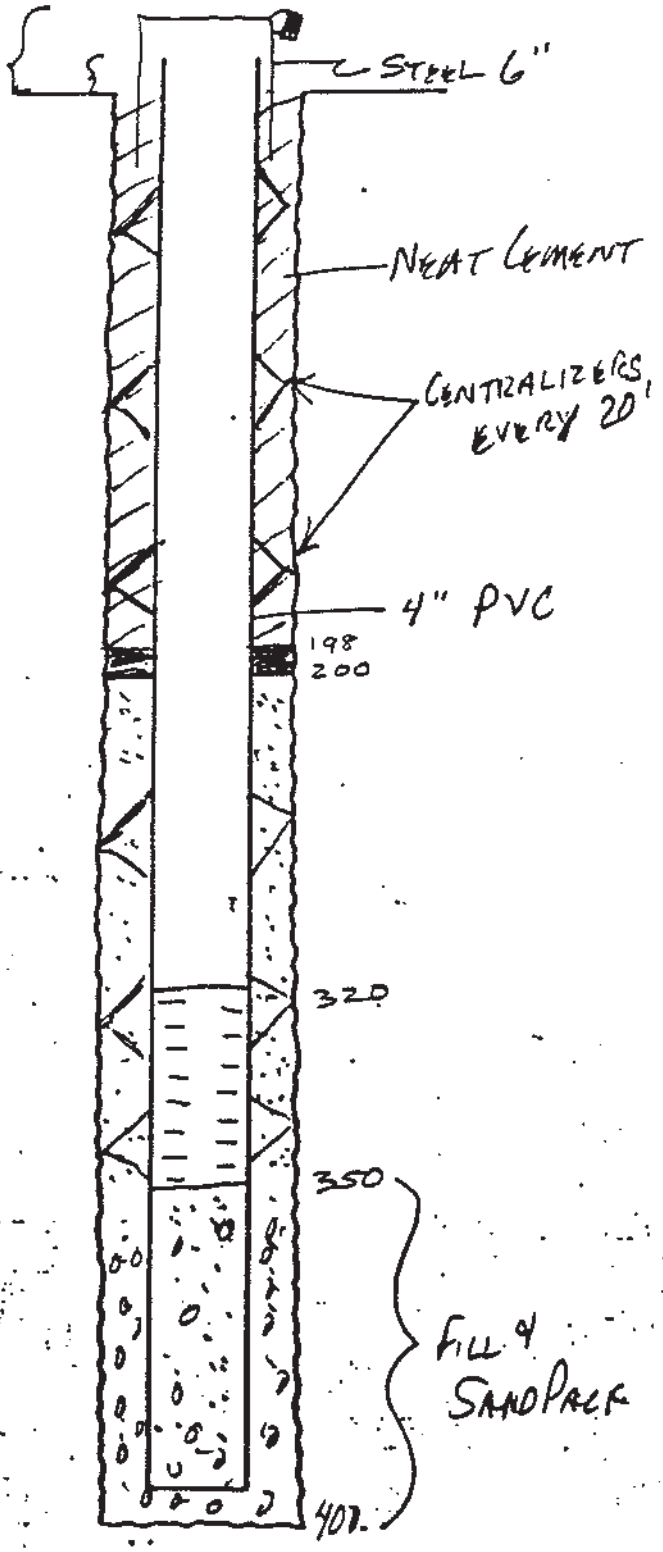
PIEZOMETER COMPLETION DIAGRAM

GW-3 / MALH 2278

DATE COMPLETED: 1-24-89 to 1-31-89
WEATHER: Cold, Hazy/Clear

PROJECT NAME/LOCATION: Atlas Grassy Mountain – Vale, Oregon
PROJECT # 219-8T-008
WELL LOCATION: Twn 26-20 & 26-21
PIEZOMETER NUMBER: (47-3) GW-3

PERMIT # _____
PROPERTY OWNER: BLM / Atlas
GEOLOGIST: K. Beiser / None
DRILLER: Duty Drilling / Dave Knarr & Bob D.
RIG TYPE & MODEL: Speedstar 15THH Air Rotary
AQUIFER: Bedrock – Grassy Mtn Fm?



COMPLETION SUMMARY

Total Well Depth 350
Stickup _____
Screen Type .020" PVC Sch 80 4" ID Flush Threaded
Screen 320 to 350
Top Seal:
Neat Cement from 0 to 198
Coarse Bentonite from 198 to 200
Gravel Pack from 200 to 400
Gravel Pack Material 8-12 Colo Silica
Bottom Seal:
None from _____ to _____
_____ from _____ to _____
Well Casing Diameter 6" steel + 4" PVC to 320
Well Casing Depth 6" steel to _____
Bit Diameter 12"
Drilled Depth 400'
Centralizers Every 20'
Protective Casing Yes – 6" steel
Logged – Y _____ N X
Type – SP ____ Res ____ Gamma ____
CAL ____ Por ____ Neutron ____
Remarks: Drilled to 400 ft w/ no measurable groundwater. Caving hole allowed PVC & sand pack to 350'. Washed down sand pack and poured 2 foot seal and trymmied neat cement. Boring past 250' & well installed unsupervised by Duty Drilling Co.

Perforated? ☐ Yes ☐ No
Type of perforator used
Size of perforations in. by in.
perforations from ft. to ft.
perforations from ft. to ft.
perforations from ft. to ft.

(7) SCREENS:
Well screen installed? ☒ Yes ☐ No
Manufacturer's Name Aardvark
Type P.V.C. Sch. 80 Model No.
Diam. 6" Slot Size .020 Set from 380 ft. to 420 ft.
Diam. 325-355 Slot Size Set from 145 ft. to 255 ft.

(8) WELL TESTS:
Drawdown is amount water level is lowered below static level
Was a pump test made? ☐ Yes ☒ No If yes, by whom?
Yield: gal./min. with ft. drawdown after hrs.
" " " "
Air test 150 gal./min. with drill stem at 420 ft. 1 hrs.
Bailer test gal./min. with ft. drawdown after hrs.
Artesian flow g.p.m.
Temperature of water Depth artesian flow encountered ft.

(9) CONSTRUCTION:
Special standards: Yes ☐ No ☐
Well seal—Material used Bent. & Cement Grout
Well sealed from land surface to 18 ft.
Diameter of well bore to bottom of seal 12 1/4 in.
Diameter of well bore below seal 9 7/8 in.
Number of sacks of cement used in well seal 10 sacks
How was cement grout placed? Pressure Grout
Was pump installed? NO Type HP Depth ft.
Was a drive shoe used? ☒ Yes ☐ No Plugs Size: location ft.
Did any strata contain unusable water? ☐ Yes ☒ No
Type of Water? depth of strata
Method of sealing strata off
Was well gravel packed? ☒ Yes ☐ No Size of gravel: No. 8
Gravel placed from 100 ft. to 245 ft.

WATER WELL REPORT
(as required by ORS 537.765)

(START CARD) # ~~W-14811~~

(1) OWNER:

Well Number: PW-4

Name: ATLAS PRECIOUS METALS

Address: 318 A STREET WEST

City: VALE State: OR Zip: 97918

(2) TYPE OF WORK:

☒ New Well ☐ Deepen ☐ Recondition ☐ Abandon

(3) DRILL METHOD

☒ Rotary Air ☐ Rotary Mud ☐ Cable

☐ Other

(4) PROPOSED USE:

☐ Domestic ☐ Community ☒ Industrial ☐ Irrigation

☐ Thermal ☐ Injection ☐ Other

(5) BORE HOLE CONSTRUCTION:

Special Construction approval Yes ☒ No ☐ Depth of Completed Well 375 ft.

Explosives used Yes ☐ No ☒ Type Amount

HOLE Diameter	From	To	SEAL Material	From	To	Amount sacks or pounds
14 3/4	0	40	PORTLAND CEMENT	0	40	19
9 7/8	40	375	VOLCLAY	5	275	40
			CEMENT	0	5	

How was seal placed: Method ☐ A ☐ B ☐ C ☐ D ☐ E

☐ Other

Backfill placed from 375 ft. to 370 ft. Material 10-20 MESH

Gravel placed from 370 ft. to 275 ft. Size of gravel 10-20 MESH

(6) CASING/LINER:

	Diameter	From	To	Gauge	Steel	Plastic	Welded	Threaded
Casing:	10"	0	40	.250	☒	☐	☐	☐
					☐	☐	☐	☐
					☐	☐	☐	☐
					☐	☐	☐	☐
Liner:	6 5/8"	0	280	.250	☐	☐	☐	☐
	6 5/8"	300	340	.250	☒	☐	☐	☐

Final location of shoe(s)

(7) PERFORATIONS/SCREENS:

☐ Perforations Method

☒ Screens Type WIRE WOUND Material Low Carbon Steel

From	To	Slot size	Number	Diameter	Tele/pipe size	Casing	Liner
280	300	.030		6"		☐	☒
340	360	.030		6"		☐	☒
						☐	☐
						☐	☐
						☐	☐
						☐	☐

(8) WELL TESTS: Minimum testing time is 1 hour

☐ Pump ☐ Bailer ☒ Air ☐ Flowing Artesian

Yield gal/min	Drawdown	Drill stem at	Time
100		350	1 hr.

Temperature of water 62°F Depth Artesian Flow Found —

Was a water analysis done? ☐ Yes By whom

Did any strata contain water not suitable for intended use? ☐ Too little

☐ Salty ☐ Muddy ☒ Odor ☐ Colored ☐ Other

Depth of strata: 280 STILL USABLE

(9) LOCATION OF WELL by legal description:

County MALHEUR Latitude Longitude

Township 21S N or S, Range 44E E or W, WM.

Section 32 SE ¼ NW ¼

Tax Lot Lot Block Subdivision

Street Address of Well (or nearest address)

(10) STATIC WATER LEVEL:

81 ft. below land surface. Date 11/17/89

Artesian pressure lb. per square inch. Date

(11) WATER BEARING ZONES:

Depth at which water was first found 280'

From	To	Estimated Flow Rate	SWL
280	360	100 gpm	81

(12) WELL LOG:

Ground elevation ≅ 3350

Material	From	To	SWL
Alluvium	0	25'	
Clay	25	150'	
Sandy clay	150	175	
Sandstone	175	215	
Clay	215	275	
Sandstone	275	305	
Clay	305	325	
Sandstone and Conglomerate	325	365	
Clay.	365	375

Appendix F
Water Quality, Well Water Level, and Spring Flow Data

Table F1. Grassy Mountain Groundwater Quality Results Summary (pg. 1 of 6)

Analytes in mg/L unless noted. MCL column has secondary MCL values indicated by an *. If result is <#, it is less than the MDL. If the result is blank, it was not tested. **Bold** results are over secondary MCL. **Red bold** results are over primary MCL.

		59760								59761							59762	59763								59766

Table F1. Grassy Mountain Groundwater Quality Results Summary (pg. 2 of 6)

Analytes in mg/L unless noted. MCL column has secondary MCL values indicated by an *. If result is <#, it is less than the MDL. If the result is blank, it was not tested. **Bold** results are over secondary MCL. **Red bold** results are over primary MCL.

Table F1. Grassy Mountain Groundwater Quality Results Summary (pg. 3 of 6)

Analytes in mg/L unless noted. MCL column has secondary MCL values indicated by an *. If result is <#, it is less than the MDL. If the result is blank, it was not tested. **Bold** results are over secondary MCL. **Red bold** results are over primary MCL.

Table F1. Grassy Mountain Groundwater Quality Results Summary (pg. 4 of 6)

Analytes in mg/L unless noted. MCL column has secondary MCL values indicated by an *. If result is <#, it is less than the MDL. If the result is blank, it was not tested. **Bold** results are over secondary MCL. **Red bold** results are over primary MCL.

Table F1. Grassy Mountain Groundwater Quality Results Summary (pg. 5 of 6)

Analytes in mg/L unless noted. MCL column has secondary MCL values indicated by an *. If result is <#, it is less than the MDL. If the result is blank, it was not tested. **Bold** results are over secondary MCL. **Red bold** results are over primary MCL.

Table F1. Grassy Mountain Groundwater Quality Results Summary (pg. 6 of 6)

Analytes in mg/L unless noted. MCL column has secondary MCL values indicated by an *. If result is <#, it is less than the MDL. If the result is blank, it was not tested. **Bold** results are over secondary MCL. **Red bold** results are over primary MCL.

Table F6. Spring and Flowing Well Flow Measurements

Spring Name	Type	Sampling Period	Sample Frequency	Date	Parameter	Result	Result_for plot	Units	Comments
Bull Spring	Spring	Q2-2013	SemiAnnual	4/10/2013	Flow Rate	0.69		GPM	
Bull Spring	Spring	Q4-2013	SemiAnnual	11/18/2013	Flow Rate	0.69		GPM	
Bull Spring	Spring	Q2-2014	SemiAnnual	6/25/2014	Flow Rate	0.73		GPM	
Bull Spring	Spring	Q4-2014	SemiAnnual	12/10/2014	Flow Rate	0.47		GPM	
Bull Spring	Spring	Q2-2015	SemiAnnual	5/6/2015	Flow Rate	0.76		GPM	
Bull Spring	Spring	Q4-2015	SemiAnnual	12/16/2015	Flow Rate	0.9		GPM	
Central Grassy Mountain Spring	Spring	Q2-2013	SemiAnnual	4/10/2013	Flow Rate	ND		GPM	Water emanating from ground. Unable to measure.
Central Grassy Mountain Spring	Spring	Q4-2013	SemiAnnual	11/18/2013	Flow Rate	ND		GPM	Water emanating from ground. Unable to measure.
Central Grassy Mountain Spring	Spring	Q2-2014	SemiAnnual	6/25/2014	Flow Rate	ND		GPM	Ground dry. No measurement.
Darky Rock Well	Flowing Well	Q2-2013	SemiAnnual	4/11/2013	Flow Rate	11.32		GPM	
Darky Rock Well	Flowing Well	Q4-2013	SemiAnnual	11/21/2013	Flow Rate	11.32		GPM	
Darky Rock Well	Flowing Well	Q2-2014	SemiAnnual	6/30/2014	Flow Rate	8.34		GPM	
Darky Rock Well	Flowing Well	Q4-2014	SemiAnnual	12/10/2014	Flow Rate	10.6		GPM	
Darky Rock Well	Flowing Well	Q2-2015	SemiAnnual	5/6/2015	Flow Rate	10.5		GPM	
Darky Rock Well	Flowing Well	Q4-2015	SemiAnnual	12/16/2015	Flow Rate	11		GPM	
Deposit Stock Tank	Spring	Q1-2013	Quarterly	3/17/2013	Flow Rate	0.38		GPM	
Deposit Stock Tank	Spring	Q2-2013	Quarterly	6/20/2013	Flow Rate	0.17		GPM	
Deposit Stock Tank	Spring	Q3-2013	Quarterly	8/13/2013	Flow Rate	0.12		GPM	
Deposit Stock Tank	Spring	Q4-2013	Quarterly	11/22/2013	Flow Rate	0.25		GPM	
Deposit Stock Tank	Spring	Q1-2014	Quarterly	3/16/2014	Flow Rate	0.56		GPM	
Deposit Stock Tank	Spring	Q2-2014	Quarterly	6/24/2014	Flow Rate	0.14		GPM	
Deposit Stock Tank	Spring	Q3-2014	Quarterly	9/17/2014	Flow Rate	0.11		GPM	
Deposit Stock Tank	Spring	Q4-2014	Quarterly	12/10/2014	Flow Rate	0.26		GPM	
Deposit Stock Tank	Spring	Q1-2015	Quarterly	3/18/2015	Flow Rate	0.41		GPM	
Deposit Stock Tank	Spring	Q2-2015	Quarterly	5/7/2015	Flow Rate	0.29		GPM	
Deposit Stock Tank	Spring	Q3-2015	Quarterly	9/23/2015	Flow Rate	ND		GPM	Inlet pipe removed. Water ponding on ground. Unable to measure.
Deposit Stock Tank	Spring	Q4-2015	Quarterly	12/16/2015	Flow Rate	ND		GPM	Inlet pipe removed. Water ponding on ground. Unable to measure.
Deposit Stock Tank	Spring	Q3-2016	Quarterly	9/29/2016	Flow Rate	0.18		GPM	New inlet pipe installed.
Deposit Stock Tank	Spring	Q4-2016	Quarterly	12/21/2016	Flow Rate	ND		GPM	Inlet frozen over. Unable to measure.
Deposit Stock Tank	Spring	Q1-2017	Quarterly	3/22/2017	Flow Rate	0.58		GPM	
Deposit Stock Tank	Spring	Q2-2017	Quarterly	6/22/2017	Flow Rate	0.26		GPM	
Deposit Stock Tank	Spring	Q3-2017	Quarterly	9/25/2017	Flow Rate	0.2		GPM	
Deposit Stock Tank	Spring	Q4-2017	Quarterly	11/29/2017	Flow Rate	0.29		GPM	
Deposit Stock Tank	Spring	Q1-2018	Quarterly	3/7/2018	Flow Rate	0.4		GPM	
Deposit Stock Tank	Spring	Q2-2018	Quarterly	6/26/2018	Flow Rate	0.14		GPM	
Deposit Stock Tank	Spring	Q3-2018	Quarterly	9/26/2018	Flow Rate	0.17		GPM	
East Grassy Mountain Spring	Spring	Q2-2013	SemiAnnual	4/10/2013	Flow Rate	ND		GPM	Water seeping from ground. Unable to measure.
East Grassy Mountain Spring	Spring	Q4-2013	SemiAnnual	11/18/2013	Flow Rate	ND		GPM	Water seeping from ground. Unable to measure.
East Grassy Mountain Spring	Spring	Q2-2014	SemiAnnual	6/25/2014	Flow Rate	ND		GPM	Water seeping from ground. Unable to measure.
Flowing Well	Flowing Well	Q2-2013	SemiAnnual	4/11/2013	Flow Rate	3.11		GPM	
Flowing Well	Flowing Well	Q4-2013	SemiAnnual	11/21/2013	Flow Rate	3.11		GPM	
Flowing Well	Flowing Well	Q2-2014	SemiAnnual	6/30/2014	Flow Rate	4.95		GPM	
Flowing Well	Flowing Well	Q4-2014	SemiAnnual	12/10/2014	Flow Rate	5.2		GPM	
Flowing Well	Flowing Well	Q2-2015	SemiAnnual	5/6/2015	Flow Rate	5.2		GPM	
Flowing Well	Flowing Well	Q4-2015	SemiAnnual	12/16/2015	Flow Rate	3.6		GPM	
Government Corral Spring	Spring	Q1-2013	Quarterly	3/13/2013	Flow Rate	1.51		GPM	
Government Corral Spring	Spring	Q2-2013	Quarterly	6/20/2013	Flow Rate	1.44		GPM	
Government Corral Spring	Spring	Q3-2013	Quarterly	8/7/2013	Flow Rate	1.35		GPM	
Government Corral Spring	Spring	Q4-2013	Quarterly	11/22/2013	Flow Rate	1.55		GPM	
Government Corral Spring	Spring	Q1-2014	Quarterly	3/16/2014	Flow Rate	1.67		GPM	
Government Corral Spring	Spring	Q2-2014	Quarterly	6/24/2014	Flow Rate	2.14		GPM	
Government Corral Spring	Spring	Q3-2014	Quarterly	9/17/2014	Flow Rate	1.93		GPM	
Government Corral Spring	Spring	Q4-2014	Quarterly	12/10/2014	Flow Rate	0.63		GPM	
Government Corral Spring	Spring	Q1-2015	Quarterly	3/18/2015	Flow Rate	0.64		GPM	
Government Corral Spring	Spring	Q2-2015	Quarterly	5/7/2015	Flow Rate	0.76		GPM	
Government Corral Spring	Spring	Q3-2015	Quarterly	9/23/2015	Flow Rate	0.87		GPM	
Government Corral Spring	Spring	Q4-2015	Quarterly	12/16/2015	Flow Rate	0.9		GPM	
Government Corral Spring	Spring	Q3-2016	Quarterly	9/29/2016	Flow Rate	1.2		GPM	
Government Corral Spring	Spring	Q4-2016	Quarterly	12/22/2016	Flow Rate	0.85		GPM	
Government Corral Spring	Spring	Q1-2017	Quarterly	3/22/2017	Flow Rate	0.38		GPM	
Government Corral Spring	Spring	Q2-2017	Quarterly	6/22/2017	Flow Rate	0.56		GPM	
Government Corral Spring	Spring	Q3-2017	Quarterly	9/25/2017	Flow Rate	1.18		GPM	
Government Corral Spring	Spring	Q4-2017	Quarterly	11/29/2017	Flow Rate	1.09		GPM	
Government Corral Spring	Spring	Q1-2018	Quarterly	3/7/2018	Flow Rate	1.08		GPM	
Government Corral Spring	Spring	Q2-2018	Quarterly	6/26/2018	Flow Rate	1.66		GPM	
Government Corral Spring	Spring	Q3-2018	Quarterly	9/26/2018	Flow Rate	1.55		GPM	
Government Corral Spring	Spring	Q4-2018	Quarterly	9/27/2018	Flow Rate	2.55		GPM	
Grassy Spring	Spring	Q1-2013	Quarterly	3/13/2013	Flow Rate	0		GPM	No flow from inlet pipe.
Grassy Spring	Spring	Q2-2013	Quarterly	6/27/2013	Flow Rate	0.005		GPM	Minimal flow. >1/4 cup per minute.
Grassy Spring	Spring	Q3-2013	Quarterly	8/7/2013	Flow Rate	0.014		GPM	Drip flow.
Grassy Spring	Spring	Q4-2013	Quarterly	11/18/2013	Flow Rate	0.016		GPM	Drip flow.
Grassy Spring	Spring	Q1-2014	Quarterly	3/17/2014	Flow Rate	0.016		GPM	Drip flow.
Grassy Spring	Spring	Q2-2014	Quarterly	6/24/2014	Flow Rate	0.01		GPM	Drip flow.
Grassy Spring	Spring	Q3-2014	Quarterly	9/17/2014	Flow Rate	0.007		GPM	Drip flow.
Grassy Spring	Spring	Q4-2014	Quarterly	12/10/2014	Flow Rate	0.02		GPM	Drip flow.
Grassy Spring	Spring	Q1-2015	Quarterly	3/18/2015	Flow Rate	0.03		GPM	Drip flow.
Grassy Spring	Spring	Q2-2015	Quarterly	5/7/2015	Flow Rate	0.01		GPM	Drip flow.
Grassy Spring	Spring	Q3-2015	Quarterly	9/23/2015	Flow Rate	0		GPM	No flow from cracked HDPE inlet pipe.
Grassy Spring	Spring	Q4-2015	Quarterly	12/16/2015	Flow Rate	0.01		GPM	Drip flow.
Grassy Spring	Spring	Q3-2016	Quarterly	9/29/2016	Flow Rate	0.01		GPM	Drip flow.
Grassy Spring	Spring	Q4-2016	Quarterly	12/21/2016	Flow Rate	0		GPM	No flow from inlet pipe. May be frozen.
Grassy Spring	Spring	Q1-2017	Quarterly	3/22/2017	Flow Rate	0.04		GPM	Drip flow.
Grassy Spring	Spring	Q2-2017	Quarterly	6/22/2017	Flow Rate	0.04		GPM	Drip flow.
Grassy Spring	Spring	Q3-2017	Quarterly	9/25/2017	Flow Rate	0.04		GPM	Drip flow.
Grassy Spring	Spring	Q4-2017	Quarterly	11/29/2017	Flow Rate	0.03		GPM	Drip flow.
Grassy Spring	Spring	Q1-2018	Quarterly	3/7/2018	Flow Rate	0.03		GPM	Drip flow.
Grassy Spring	Spring	Q2-2018	Quarterly	6/26/2018	Flow Rate	0.02		GPM	Drip flow.
Grassy Spring	Spring	Q3-2018	Quarterly	9/26/2018	Flow Rate	0.02		GPM	Drip flow.
Lowe Spring	Spring	Q1-2013	Quarterly	3/13/2013	Flow Rate	0.03		GPM	Drip flow.
Lowe Spring	Spring	Q2-2013	Quarterly	6/26/2013	Flow Rate	0.02		GPM	Drip flow.
Lowe Spring	Spring	Q3-2013	Quarterly	8/13/2013	Flow Rate	0.012		GPM	Drip flow.
Lowe Spring	Spring	Q4-2013	Quarterly	11/22/2013	Flow Rate	0.023		GPM	Drip flow.
Lowe Spring	Spring	Q1-2014	Quarterly	3/16/2014	Flow Rate	0.026		GPM	Drip flow.
Lowe Spring	Spring	Q2-2014	Quarterly	6/24/2014	Flow Rate	0.003		GPM	Drip flow.
Lowe Spring	Spring	Q3-2014	Quarterly	9/17/2014	Flow Rate	0.001		GPM	Drip flow.
Lowe Spring	Spring	Q4-2014	Quarterly	12/10/2014	Flow Rate	0		GPM	HDPE line broken at cutbank. No visible flow.
Lowe Spring	Spring	Q1-2015	Quarterly	3/18/2015	Flow Rate	ND		GPM	Pipe discharges directly into ground. Unable to measure.
Lowe Spring	Spring	Q2-2015	Quarterly	5/7/2015	Flow Rate	0		GPM	Pipe snapped at cutbank. No visible flow.

Lowe Spring	Spring	Q3-2015	Quarterly	9/23/2015	Flow Rate	ND		GPM	Broken pipe frozen into ground. Unable to measure.
Lowe Spring	Spring	Q4-2015	Quarterly	12/16/2015	Flow Rate	ND		GPM	Broken pipe frozen into ground. Unable to measure.
Lowe Spring	Spring	Q3-2016	Quarterly	9/29/2016	Flow Rate	ND		GPM	Broken pipe stuck under mud. Unable to measure.
Lowe Spring	Spring	Q4-2016	Quarterly	12/21/2016	Flow Rate	ND		GPM	Pipe buried in snow and frozen in ground. Unable to measure.
Lowe Spring	Spring	Q1-2017	Quarterly	3/22/2017	Flow Rate	ND		GPM	Pipe end buried in mud. Unable to measure.
Lowe Spring	Spring	Q2-2017	Quarterly	6/22/2017	Flow Rate	0.41		GPM	
Lowe Spring	Spring	Q3-2017	Quarterly	9/25/2017	Flow Rate	0.41		GPM	
Lowe Spring	Spring	Q4-2017	Quarterly	11/29/2017	Flow Rate	0.44		GPM	
Lowe Spring	Spring	Q1-2018	Quarterly	3/7/2018	Flow Rate	0.19		GPM	
Lowe Spring	Spring	Q2-2018	Quarterly	6/26/2018	Flow Rate	0.09		GPM	Drip flow.
Lowe Spring	Spring	Q3-2018	Quarterly	9/26/2018	Flow Rate	0.06		GPM	Drip flow.
Negro Rock Canyon Spring	Spring	Q2-2013	SemiAnnual	6/26/2013	Flow Rate	5 to 10		GPM	Visual estimate of flow in channel downstream from spring source.
Negro Rock Canyon Spring	Spring	Q4-2013	SemiAnnual	11/21/2013	Flow Rate	5 to 10		GPM	Visual estimate of flow in channel downstream from spring source.
Negro Rock Canyon Spring	Spring	Q2-2014	SemiAnnual	6/30/2014	Flow Rate	ND		GPM	Water emanating from ground at very low velocity. Unable to measure.
Negro Rock Canyon Spring	Spring	Q4-2014	SemiAnnual	12/10/2014	Flow Rate	ND		GPM	Water emanating from ground at very low velocity. Unable to measure.
Negro Rock Canyon Spring	Spring	Q2-2015	SemiAnnual	5/6/2015	Flow Rate	ND		GPM	Water emanating from ground at very low velocity. Unable to measure.
Negro Rock Canyon Spring	Spring	Q4-2015	SemiAnnual	12/15/2015	Flow Rate	ND		GPM	Water emanating from ground at very low velocity. Unable to measure.
Negro Rock Spring	Spring	Q2-2013	SemiAnnual	6/26/2013	Flow Rate	ND		GPM	Inlet below surface of tire tank.
Negro Rock Spring	Spring	Q4-2013	SemiAnnual	11/21/2013	Flow Rate	ND		GPM	Inlet below surface of tire tank.
Negro Rock Spring	Spring	Q2-2014	SemiAnnual	6/30/2014	Flow Rate	ND		GPM	Inlet below surface of tire tank.
Negro Rock Spring	Spring	Q4-2014	SemiAnnual	12/10/2014	Flow Rate	ND		GPM	Inlet below surface of tire tank.
Negro Rock Spring	Spring	Q2-2015	SemiAnnual	5/6/2015	Flow Rate	ND		GPM	Inlet below surface of tire tank.
Negro Rock Spring	Spring	Q4-2015	SemiAnnual	12/15/2015	Flow Rate	ND		GPM	Inlet below surface of tire tank.
Oxbow Spring	Spring	Q2-2013	SemiAnnual	4/10/2013	Flow Rate	0.30		GPM	
Oxbow Spring	Spring	Q4-2013	SemiAnnual	11/18/2013	Flow Rate	0.30		GPM	
Oxbow Spring	Spring	Q2-2014	SemiAnnual	6/25/2014	Flow Rate	0.27		GPM	
Oxbow Spring	Spring	Q4-2014	SemiAnnual	12/18/2014	Flow Rate	0.27		GPM	
Oxbow Spring	Spring	Q2-2015	SemiAnnual	5/6/2015	Flow Rate	0.27		GPM	
Oxbow Spring	Spring	Q4-2015	SemiAnnual	12/15/2015	Flow Rate	0.3		GPM	
Oxyoke Spring	Spring	Q2-2013	SemiAnnual	4/10/2013	Flow Rate	0		GPM	No flow at inlet.
Oxyoke Spring	Spring	Q4-2013	SemiAnnual	11/18/2013	Flow Rate	0		GPM	No flow at inlet.
Oxyoke Spring	Spring	Q2-2014	SemiAnnual	6/25/2014	Flow Rate	0		GPM	No flow at inlet.
Oxyoke Spring	Spring	Q4-2014	SemiAnnual	12/18/2014	Flow Rate	0		GPM	No flow at inlet.
Oxyoke Spring	Spring	Q2-2015	SemiAnnual	5/6/2015	Flow Rate	0		GPM	No flow at inlet.
Oxyoke Spring	Spring	Q4-2015	SemiAnnual	12/15/2015	Flow Rate	0		GPM	No flow at inlet.
Poison Spring	Spring	Q1-2013	Quarterly	3/26/2013	Flow Rate	ND		GPM	Unable to measure.
Poison Spring	Spring	Q2-2013	Quarterly	6/26/2013	Flow Rate	0.99	0.99	GPM	
Poison Spring	Spring	Q3-2013	Quarterly	8/13/2013	Flow Rate	ND		GPM	No gap between concrete box crack and surrounding water surface.
Poison Spring	Spring	Q4-2013	Quarterly	11/21/2013	Flow Rate	1.06	1	GPM	
Poison Spring	Spring	Q1-2014	Quarterly	3/16/2014	Flow Rate	1.00	1.00	GPM	Visual estimate of flow from crack in concrete.
Poison Spring	Spring	Q2-2014	Quarterly	6/24/2014	Flow Rate	1.00	1.00	GPM	Visual estimate of flow from crack in concrete.
Poison Spring	Spring	Q3-2014	Quarterly	9/16/2014	Flow Rate	1.00	1	GPM	Visual estimate of flow from crack in concrete.
Poison Spring	Spring	Q4-2014	Quarterly	12/10/2014	Flow Rate	1.00	1	GPM	Visual estimate of flow from crack in concrete.
Poison Spring	Spring	Q1-2015	Quarterly	3/18/2015	Flow Rate	1.00	1	GPM	Visual estimate of flow from crack in concrete.
Poison Spring	Spring	Q2-2015	Quarterly	5/6/2015	Flow Rate	1.00	1	GPM	Visual estimate of flow from crack in concrete.
Poison Spring	Spring	Q3-2015	Quarterly	9/23/2015	Flow Rate	1.00	1	GPM	Visual estimate of flow from crack in concrete.
Poison Spring	Spring	Q4-2015	Quarterly	12/15/2015	Flow Rate	1.4	1.4	GPM	Difficult to measure. Flow is an approximation.
Poison Spring	Spring	Q3-2016	Quarterly	9/29/2016	Flow Rate	1.9	1.9	GPM	Difficult to measure. Flow is an approximation.
Poison Spring	Spring	Q4-2016	Quarterly	12/23/2016	Flow Rate	ND		GPM	Water flowing over both ends of concrete box. Unable to capture flow.
Poison Spring	Spring	Q1-2017	Quarterly	3/22/2017	Flow Rate	ND		GPM	Water flowing over both ends of concrete box. Unable to capture flow.
Poison Spring	Spring	Q2-2017	Quarterly	6/22/2017	Flow Rate	ND		GPM	Water flowing out of crack in concrete below water line. Unable to measure.
Poison Spring	Spring	Q3-2017	Quarterly	9/25/2017	Flow Rate	3.42	3.42	GPM	Difficult to measure. Flow is an approximation.
Poison Spring	Spring	Q4-2017	Quarterly	11/29/2017	Flow Rate	1.73	1.73	GPM	Difficult to measure. Flow is an approximation.
Poison Spring	Spring	Q1-2018	Quarterly	3/7/2018	Flow Rate	1.77	1.77	GPM	Difficult to measure. Flow is an approximation.
Poison Spring	Spring	Q2-2018	Quarterly	6/26/2018	Flow Rate	2.43	2.43	GPM	Difficult to measure. Flow is an approximation.
Poison Spring	Spring	Q3-2018	Quarterly	9/26/2018	Flow Rate	1.70	1.70	GPM	Difficult to measure. Flow is an approximation.
Prod-1	Flowing Well	Q1-2013	Quarterly	3/17/2013	Flow Rate	1.40		GPM	
Prod-1	Flowing Well	Q2-2013	Quarterly	6/20/2013	Flow Rate	1.30		GPM

ACZ Laboratory Reports, 2013 - 2018

ACZ Laboratories, Inc.
2773 Downhill Drive Steamboat Springs, CO 80487 (800) 334-5493

Analytical Report

March 29, 2013

Report to:
Erik Boe
SPF Water Engineering
300 E. Mallard Drive, Suite 350
Boise, ID 83706

Bill to:
Crystal Jensen
SPF Water Engineering
300 E. Mallard Drive, Suite 350
Boise, ID 83706

Project ID: Calico Winter Sampling
ACZ Project ID: L11130

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on March 15, 2013. This project has been assigned to ACZ's project number, L11130. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11130. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after April 29, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

ACZ Laboratories, Inc.
2773 Downhill Drive Steamboat Springs, CO 80487 (800) 334-5493

Case Narrative

SPF Water Engineering

March 29, 2013

Project ID: Calico Winter Sampling
ACZ Project ID: L11130

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 8 ground water samples from SPF Water Engineering on March 15, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L11130. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses except those qualified with an ACZ 'H' flag were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both the ACZ invoice and the analytical reports.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?	X		

A change was made in the sample identification and remarks section prior to ACZ custody.

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

Project ID: Calico Winter Sampling
ACZ Project ID: L11147

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on March 16, 2013. This project has been assigned to ACZ's project number, L11147. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11147. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after April 29, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

Case Narrative

SPF Water Engineering

March 29, 2013

Project ID: Calico Winter Sampling
ACZ Project ID: L11147

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 4 ground water samples from SPF Water Engineering on March 16, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L11147. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses except those qualified with an ACZ 'H' flag were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both the ACZ invoice and the analytical reports.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

Sample Receipt

SPF Water Engineering
Calico Winter Sampling

ACZ Project ID: L11147
Date Received: 03/16/2013 10:39
Received By: ksj
Date Printed: 3/18/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on March 19, 2013. This project has been assigned to ACZ's project number, L11164. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11164. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 01, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

ACZ Project ID: L11164
Date Received: 03/19/2013 09:59
Received By: ksj
Date Printed: 3/19/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

Project ID: Calico Winter Sampling
ACZ Project ID: L11193

Jason Thompson:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on March 20, 2013. This project has been assigned to ACZ's project number, L11193. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11193. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 01, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

SPF Water Engineering

April 01, 2013

Project ID: Calico Winter Sampling
ACZ Project ID: L11193

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 5 ground water samples from SPF Water Engineering on March 20, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L11193. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses except those qualified with an ACZ 'H' flag were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. Client samples were received at a temperature outside of the acceptable range (See Sample Receipt Form).

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on March 28, 2013. This project has been assigned to ACZ's project number, L11314. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11314. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 23, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

SPF Water Engineering

April 23, 2013

Project ID: Calico Winter Sampling
ACZ Project ID: L11314

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 4 ground water samples from SPF Water Engineering on March 28, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L11314. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses except those qualified with an ACZ 'H' flag were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both the ACZ invoice and the analytical reports.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

Project ID: Calico Winter Sampling
ACZ Project ID: L11353

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on April 01, 2013. This project has been assigned to ACZ's project number, L11353. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11353. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 15, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

SPF Water Engineering

April 15, 2013

Project ID: Calico Winter Sampling
ACZ Project ID: L11353

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 7 ground water samples from SPF Water Engineering on April 1, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L11353. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. The total versus dissolved disparity involving Manganese (sample -01) was reanalyzed for confirmation. Please be advised that ACZ Labs will retest any suspect analyte at client request.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

ACZ Project ID: ***L11353***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L11353-01	WG341425	Calcium, dissolved	M200.7 ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG341637	Iron, total	M200.7 ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG341971	Mercury, dissolved	M1631, Atomic Fluorescence	D1	Sample required dilution due to matrix.
	WG341924	Mercury, total	M1631, Atomic Fluorescence	D1	Sample required dilution due to matrix.
			M1631, Atomic Fluorescence	DF	Sample required dilution due to high sediment.
	WG341627	Silver, dissolved	M200.8 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M200.8 ICP-MS	ZA	Poor recovery for Silver quality control is accepted due to low Silver solubility in samples, digestates, or extracts that do not contain sufficient Hydrochloric acid.
	WG341425	Strontium, dissolved	M200.7 ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG341715	Nitrogen, ammonia	M350.1 - Automated Phenate	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG341806	Phosphorus, total	M365.1 - Auto Ascorbic Acid (digest)	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M365.1 - Auto Ascorbic Acid (digest)	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
L11353-02	WG341425	Calcium, dissolved	M200.7 ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG341637	Iron, total	M200.7 ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG341373	Total Alkalinity	SM2320B - Titration	ZW	Method deviation. The sample was centrifuged prior to analysis due to high solid content.

Sample Receipt

SPF Water Engineering
Calico Winter Sampling

ACZ Project ID: L11353
Date Received: 04/01/2013 09:49
Received By: ksj
Date Printed: 4/1/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?	X		
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on April 01, 2013. This project has been assigned to ACZ's project number, L11354. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11354. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 11, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Sample Receipt

SPF Water Engineering
Calico Winter Sampling

ACZ Project ID: L11354
Date Received: 04/01/2013 09:50
Received By: ksj
Date Printed: 4/2/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?	X		

A change was made in the time and remarks section prior to ACZ custody.

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?	X		
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on April 01, 2013. This project has been assigned to ACZ's project number, L11355. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11355. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 15, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.
(5)	Standard Methods for the Examination of Water and Wastewater.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

Sample Receipt

SPF Water Engineering
Calico Winter Sampling

ACZ Project ID: L11355
Date Received: 04/01/2013 09:52
Received By: ksj
Date Printed: 4/1/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?	X		

A change was made in the sample identification and analyses requested section prior to ACZ custody.

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?		X	
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X		

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
4113	1.6	13	Yes

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Sampler's Name: Erik Boe **Sampler's site Information** **State:** ID **Zip code** 83706 **Time Zone** MTN

ACZ Project ID: L11356

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on April 01, 2013. This project has been assigned to ACZ's project number, L11356. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11356. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 12, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.
(5)	Standard Methods for the Examination of Water and Wastewater.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Sample Receipt

SPF Water Engineering
Calico Winter Sampling

ACZ Project ID: L11356
Date Received: 04/01/2013 09:53
Received By: ksj
Date Printed: 4/1/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?	X		

A change was made in the relinquished by section prior to ACZ custody.

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?	X		
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on April 01, 2013. This project has been assigned to ACZ's project number, L11357. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L11357. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after May 11, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

Project ID: Calico Winter Sampling
Sample ID: TRANSFER BLANK

ACZ Sample ID: ***L11357-07***
Date Sampled: *03/13/13 14:35*
Date Received: *04/01/13*
Sample Matrix: *Ground Water*

Wet Chemistry

Parameter	EPA Method	Result	Qual	XQ	Units	MDL	PQL	Date	Analyst
Nitrogen, ammonia	M350.1 - Automated Phenate		U	*	mg/L	0.05	0.5	04/08/13 16:05	lhb
Phosphorus, total	M365.1 - Auto Ascorbic Acid (digest)		U		mg/L	0.01	0.05	04/09/13 19:07	pjb

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.
(5)	Standard Methods for the Examination of Water and Wastewater.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

ACZ Project ID: L11357
Date Received: 04/01/2013 09:51
Received By: ksj
Date Printed: 4/1/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?		X	
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

ACZ Project ID: L12799

Jason Thompson:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 19, 2013. This project has been assigned to ACZ's project number, L12799. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12799. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after July 31, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Tony Antalek has reviewed and approved this report.

Case Narrative

SPF Water Engineering

July 01, 2013

Project ID: Calico 2nd Qtr
ACZ Project ID: L12799

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 6 ground water samples from SPF Water Engineering on June 19, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L12799. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses except those qualified with an ACZ 'H' flag were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. Client samples were received at a temperature outside of the acceptable range (See Sample Receipt Form).

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(5) Standard Methods for the Examination of Water and Wastewater.

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

Jason Thompson:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 20, 2013. This project has been assigned to ACZ's project number, L12835. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12835. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 11, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

SPF Water Engineering

July 12, 2013

Project ID: Calico 2nd Q samplin
ACZ Project ID: L12835

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 7 ground water samples from SPF Water Engineering on June 20, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L12835. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The following anomaly required further explanation not provided by the Extended Qualifier Report:

1. For sample L12835-02, the dissolved and total Cobalt values were verified by re-digestion and re-analysis with no significant change.

Metals Analysis

Parameter	EPA Method	Dilution	Result	Qual	XQ	Units	MDL	PQL	Date	Analyst
Mercury, total	M1631, Atomic Fluorescence	1		U		ng/L	0.2	0.5	06/26/13 14:09	las

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(2) EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3) EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4) EPA SW-846. Test Methods for Evaluating Solid Waste.
(5) Standard Methods for the Examination of Water and Wastewater.

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L12835-01	WG346549	Iron, total	M200.7 ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG346624	Manganese, dissolved	M200.8 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG346620	Mercury, dissolved	M1631, Atomic Fluorescence	DF	Sample required dilution due to high sediment.
	WG346203	Bicarbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Carbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Conductivity @25C	SM2510B	Q6	Sample was received above recommended temperature.
	WG346691	Cyanide, total	M335.4 - Colorimetric w/ distillation	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M335.4 - Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			M335.4 - Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346687	Cyanide, WAD	SM4500-CN I-Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			SM4500-CN I-Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346203	Hydroxide as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
	WG346805	Nitrogen, ammonia	M350.1 - Automated Phenate	Q6	Sample was received above recommended temperature.
			M350.1 - Automated Phenate	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346203	pH	SM4500H+ B	Q6	Sample was received above recommended temperature.
		pH measured at	SM4500H+ B	Q6	Sample was received above recommended temperature.

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L12835
Date Received: 06/20/2013 10:27
Received By: gac
Date Printed: 6/23/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?	X		
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X		

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
3917	16.8	13	Yes
4004	17.7	13	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s) but was thawed by receipt at ACZ.

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

Boise, ID 83706

Bill to:
Crystal Jensen
SPF Water Engineering
300 E. Mallard Drive, Suite 350
Boise, ID 83706

Project ID: Calico 2nd Q samplin
ACZ Project ID: L12836

Jason Thompson:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 20, 2013. This project has been assigned to ACZ's project number, L12836. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12836. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 08, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.
(5)	Standard Methods for the Examination of Water and Wastewater.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L12836
Date Received: 06/20/2013 10:26
Received By: gac
Date Printed: 6/23/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?		X	

Some parameters were received past hold time.

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
1124	1.2	12	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s).

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [ ]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Project ID: Calico 2nd Q samplin
ACZ Project ID: L12882

Jason Thompson:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 21, 2013. This project has been assigned to ACZ's project number, L12882. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12882. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 09, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Calico 2nd Q sampling

ACZ Project ID: L12882
Date Received: 06/21/2013 10:15
Received By: gac
Date Printed: 6/24/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?		X	
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X		

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
3935	13.6	13	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s) but was thawed by receipt at ACZ.

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

Jason Thompson:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 21, 2013. This project has been assigned to ACZ's project number, L12883. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12883. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 09, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

L12883-02	WG346859	Arsenic, total	M200.8 ICP-MS	B7	Target analyte detected in prep / method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.
	WG346538	Mercury, total	M1631, Atomic Fluorescence	DF	Sample required dilution due to high sediment.
	WG346203	Bicarbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Carbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Conductivity @25C	SM2510B	Q6	Sample was received above recommended temperature.
	WG346872	Cyanide, total	M335.4 - Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			M335.4 - Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346875	Cyanide, WAD	SM4500-CN I-Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			SM4500-CN I-Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346203	Hydroxide as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
	WG346818	Nitrogen, ammonia	M350.1 - Automated Phenate	Q6	Sample was received above recommended temperature.
			M350.1 - Automated Phenate	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346203	pH	SM4500H+ B	Q6	Sample was received above recommended temperature.
		pH measured at	SM4500H+ B	Q6	Sample was received above recommended temperature.
	WG346867	Phosphorus, total	M365.1 - Auto Ascorbic Acid (digest)	Q6	Sample was received above recommended temperature.
	WG346398	Residue, Non-Filterable (TSS) @105C	SM2540D	Q6	Sample was received above recommended temperature.
			SM2540D	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346203	Total Alkalinity	SM2320B - Titration	Q6	Sample was received above recommended temperature.

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L12883
Date Received: 06/21/2013 10:14
Received By: gac
Date Printed: 6/24/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?		X	
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X		

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
3546	13.4	15	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s) but was thawed by receipt at ACZ.

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [ ]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Project ID: Calico 2nd Q samplin
ACZ Project ID: L12893

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 22, 2013. This project has been assigned to ACZ's project number, L12893. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12893. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 10, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L12893
Date Received: 06/22/2013 10:04
Received By: gac
Date Printed: 6/24/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?		X	

Some parameters were received past hold time.

Chain of Custody Related Remarks

Sample "Spring Equip Blank" was not received and was not entered with the project.

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
1815	1.7	12	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s).

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 25, 2013. This project has been assigned to ACZ's project number, L12937. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12937. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 10, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.
(5)	Standard Methods for the Examination of Water and Wastewater.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L12937
Date Received: 06/25/2013 10:33
Received By: mtb
Date Printed: 6/26/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?		X	
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X		

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
3425	13.6	12	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s) but was thawed by receipt at ACZ.

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 25, 2013. This project has been assigned to ACZ's project number, L12940. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L12940. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 14, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Metals Analysis

Parameter	EPA Method	Dilution	Result	Qual	XQ	Units	MDL	PQL	Date	Analyst
Mercury, total	M1631, Atomic Fluorescence	1		U		ng/L	0.2	0.5	07/02/13 15:33	las

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L12940-01	WG347071	Antimony, dissolved	M200.8 ICP-MS	R4	RPD for a spike and spike duplicate exceeded the method or laboratory acceptance limit. At a minimum, one spike recovery met acceptance criteria.
	WG347262	Copper, total	M200.8 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG347159	Mercury, dissolved	M1631, Atomic Fluorescence	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG347071	Silver, dissolved	M200.8 ICP-MS	R4	RPD for a spike and spike duplicate exceeded the method or laboratory acceptance limit. At a minimum, one spike recovery met acceptance criteria.
		Vanadium, dissolved	M200.8 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
	WG347262	Vanadium, total	M200.8 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
	WG346393	Bicarbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Carbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Conductivity @25C	SM2510B	Q6	Sample was received above recommended temperature.
			SM2510B	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346907	Cyanide, total	M335.4 - Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			M335.4 - Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346908	Cyanide, WAD	SM4500-CN I-Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			SM4500-CN I-Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346393	Hydroxide as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
	WG347124	Nitrogen, ammonia	M350.1 - Automated Phenate	Q6	Sample was received above recommended temperature.
	WG346393	pH	SM4500H+ B	Q6	Sample was received above recommended temperature.
		pH measured at	SM4500H+ B	Q6	Sample was received above recommended temperature.
	WG347083	Phosphorus, total	M365.1 - Auto Ascorbic Acid (digest)	Q6	Sample was received above recommended temperature.
			M365.1 - Auto Ascorbic Acid (digest)	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346565	Residue, Non-Filterable (TSS) @105C	SM2540D	Q6	Sample was received above recommended temperature.
			SM2540D	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346393	Total Alkalinity	SM2320B - Titration	Q6	Sample was received above recommended temperature.
			SM2320B - Titration	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).

	WG347262	Copper, total	M200.8 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG347159	Mercury, dissolved	M1631, Atomic Fluorescence	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG347071	Silver, dissolved	M200.8 ICP-MS	R4	RPD for a spike and spike duplicate exceeded the method or laboratory acceptance limit. At a minimum, one spike recovery met acceptance criteria.
		Vanadium, dissolved	M200.8 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
	WG347262	Vanadium, total	M200.8 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
	WG346393	Bicarbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Carbonate as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
		Conductivity @25C	SM2510B	Q6	Sample was received above recommended temperature.
			SM2510B	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346907	Cyanide, total	M335.4 - Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			M335.4 - Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346908	Cyanide, WAD	SM4500-CN I-Colorimetric w/ distillation	Q6	Sample was received above recommended temperature.
			SM4500-CN I-Colorimetric w/ distillation	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346393	Hydroxide as CaCO3	SM2320B - Titration	Q6	Sample was received above recommended temperature.
	WG347124	Nitrogen, ammonia	M350.1 - Automated Phenate	Q6	Sample was received above recommended temperature.
			M350.1 - Automated Phenate	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346393	pH	SM4500H+ B	Q6	Sample was received above recommended temperature.
		pH measured at	SM4500H+ B	Q6	Sample was received above recommended temperature.
	WG347083	Phosphorus, total	M365.1 - Auto Ascorbic Acid (digest)	Q6	Sample was received above recommended temperature.
			M365.1 - Auto Ascorbic Acid (digest)	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346565	Residue, Non-Filterable (TSS) @105C	SM2540D	Q6	Sample was received above recommended temperature.
			SM2540D	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG346393	Total Alkalinity	SM2320B - Titration	Q6	Sample was received above recommended temperature.
			SM2320B - Titration	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L12940
Date Received: 06/25/2013 10:28
Received By: mtb
Date Printed: 6/26/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?	X		
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X		

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
3884	14.8	11	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s) but was thawed by receipt at ACZ.

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Boise, ID 83706

Project ID: Calico 2nd Q sampling
ACZ Project ID: L13015

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 28, 2013. This project has been assigned to ACZ's project number, L13015. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L13015. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 10, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(5) Standard Methods for the Examination of Water and Wastewater.

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L13015
Date Received: 06/28/2013 10:46
Received By: gac
Date Printed: 7/1/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?	X		

A change was made in the sample identification section prior to ACZ custody.

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?		X	

Some parameters were received past hold time.

Chain of Custody Related Remarks

Client Contact Remarks

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/Hr)	Custody Seal Intact?
NA17896	20.7	13	Yes

Was ice present in the shipment container(s)?

Yes - Wet ice was present in the shipment container(s) but was thawed by receipt at ACZ.

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on June 29, 2013. This project has been assigned to ACZ's project number, L13026. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L13026. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 11, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.
(5)	Standard Methods for the Examination of Water and Wastewater.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L13026
Date Received: 06/29/2013 09:48
Received By: gac
Date Printed: 7/2/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?		X	

Some parameters were received past hold time.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Project ID: Calico 2nd Q sampling
ACZ Project ID: L13032

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 01, 2013. This project has been assigned to ACZ's project number, L13032. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L13032. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 18, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

SPF Water Engineering

July 19, 2013

Project ID: Calico 2nd Q sampling
ACZ Project ID: L13032

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 5 ground water samples from SPF Water Engineering on July 1, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L13032. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The following anomaly required further explanation not provided by the Extended Qualifier Report:

1. For L13032-01, 02 and -04, the dissolved and total cobalt values were verified by re-digestion and re-analysis with no significant change.

Mercury, total	M1631, Atomic Fluorescence	1		U		ng/L	0.2	0.5	07/11/13 13:03	las

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(2) EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3) EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4) EPA SW-846. Test Methods for Evaluating Solid Waste.
(5) Standard Methods for the Examination of Water and Wastewater.

Comments

(1) QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2) Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3) Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4) An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5) If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

For a complete list of ACZ's Extended Qualifiers, please click: http://www.acz.com/public/extquallist.pdf

Sample Receipt

SPF Water Engineering
Calico 2nd Q sampling

ACZ Project ID: L13032
Date Received: 07/01/2013 10:09
Received By: gac
Date Printed: 7/2/2013

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?		X	

L13032-01 : HG-1631's not in sealed double bags.

L13032-02 : HG-1631's not in sealed double bags.

L13032-03 : HG-1631's not in sealed double bags.

L13032-04 : HG-1631's not in sealed double bags.

L13032-05 : HG-1631 not in sealed double bags.

16) Is there an Hg-1631 trip blank present?	X		
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [X] NO [ ]

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified

Are samples for SDWA Compliance Monitoring? Yes [ ] No [X]

If yes, please include state forms. Results will be reported to PQL for Colorado.

Analytical Report

July 19, 2013

Report to:
Erik Boe
SPF Water Engineering
300 E. Mallard Drive, Suite 350
Boise, ID 83706

Bill to:
Crystal Jensen
SPF Water Engineering
300 E. Mallard Drive, Suite 350
Boise, ID 83706

Project ID: Calico 2nd Q sampling
ACZ Project ID: L13047

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 02, 2013. This project has been assigned to ACZ's project number, L13047. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L13047. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 18, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Case Narrative

SPF Water Engineering

July 19, 2013

Project ID: Calico 2nd Q sampling
ACZ Project ID: L13047

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 2 ground water samples from SPF Water Engineering on July 2, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L13047. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The following anomaly required further explanation not provided by the Extended Qualifier Report:

1. For L13047-01, the dissolved and total cobalt values were verified by re-digestion and re-analysis with no significant change.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
L	Target analyte response was below the laboratory defined negative threshold.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(4)	EPA SW-846. Test Methods for Evaluating Solid Waste.
(5)	Standard Methods for the Examination of Water and Wastewater.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?			X
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody complete and accurate?	X		
7) Were any changes made to the Chain of Custody prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits?	X		
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?	X		
16) Is there an Hg-1631 trip blank present?		X	
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?	X

Erik Boe:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 02, 2013. This project has been assigned to ACZ's project number, L13048. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan. The enclosed results relate only to the samples received under L13048. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after August 18, 2013. If the samples are determined to be hazardous, additional charges apply for disposal (typically $11/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical raw data reports for ten years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

Case Narrative

SPF Water Engineering

July 19, 2013

Project ID: Calico 2nd Q sampling
ACZ Project ID: L13048

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 4 ground water samples from SPF Water Engineering on July 2, 2013. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L13048. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The following anomaly required further explanation not provided by the Extended Qualifier Report:

1. For L13048-01, -04, the dissolved and total cobalt values were verified by re-digestion and re-analysis with no significant change.
